| 219               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 220               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 222               | " -            | -      | "                                | Portsmouth -                               | -                              |             |         | Portsmouth.         |
| 223               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 226               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 230               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 233               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 241               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 242               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 244               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 245               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 246               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 251               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 253               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 254               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 255               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 256               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 257               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |
| 258               | " -            | -      | "                                | Do. -                                      | -                              |             |         | Do.                 |

SIR, Manchester, January 29, 1863.

IN reply to your letter of the 26th instant, I beg to state that it will afford me much pleasure to show the whole of the manufacture of my ordnance to the Committee, and make them thoroughly acquainted with it. This, however, I should prefer doing after the comparative trials between Sir William Armstrong's guns and mine have been made.

I think the most important part of the proposed trials may soon be made, if my firm can receive the order for the guns which will be required.

I shall be most happy at any time to see the Committee at our office in Pall Mall, where I can further explain the principle of the guns and projectiles by means of the models which are there.

In answer to your second letter of the 26th, I have to inform you that the drawings of the 12-pr. and 70-pr. guns and ammunition necessary in order to make the carriages for them are in hand, and shall be sent up in a few days, also the proof sheet of my evidence.

I am, &c.

Capt. H. Dyer, R.A.,  
Secretary.

JOSEPH WHITWORTH.

SIR, Manchester, February 17, 1863.

I AM desired by Mr. Whitworth, in his absence, to acknowledge the receipt of your letter No. 18, ordering three 12-pr. and three 70-pr. (5½") homogeneous metal rifled guns, to be submitted to the "Special Armstrong and Whitworth Committee" for experimental purposes, and for which an official order will come from Woolwich in the usual way.

The guns will be completed as early as possible, and will probably be as follows:—Three 12-pr. guns in three, four, and six weeks; three 70-pr. guns in three, six, and eight weeks.

It would be desirable for the shot and shell to be ordered, so that they may be being proceeded with at the same time as the guns.

I am, &c.

Capt. H. Dyer, R.A.,  
Secretary.

WILLIAM W. HULSE.

28, Pall Mall, London, S.W.,

June 17, 1863.

SIR,

IN reply to your letter No. 212, we beg to say that the cartridges with Boxer's lubricator attached, which you have sent from the Royal Laboratory, appear to be suitable, but we should be glad to be favoured with 100 for the 12-pr. guns, to give them a trial.

With reference to the delivery of Whitworth guns, we are really in the hands of the manufacturers of the homogeneous metal used for the guns. They have been for some time endeavouring to get to work hammers of the weight which we find absolutely necessary for properly manufacturing the metal in the heavy masses required for the large guns, and we are unwilling to risk the guns made with the lighter hammers now in operation in this country.

It is a great disappointment to us that the manufacturers have not yet been able to put into operation the more powerful hammers they have undertaken to employ, but which they now confidently state will be at work in six weeks' time.

Under these circumstances we regret to inform the Committee that we must still ask for further time for the delivery of the guns.

We fear this delay may lead to observations unfavourable to us, but we prefer to submit to them rather than we should send in a gun for trial that we do not feel would be the best gun that can be produced by us.

We are, &c.

MANCHESTER ORDNANCE & RIFLE CO.

Capt. H. Dyer, R.A.,  
Secretary.

Sackville Street, Manchester,

September 4, 1863.

DEAR SIR,

I AM happy to inform you that we are now in a position to state that the rifled guns to be submitted to the "Special Armstrong and Whitworth Committee" will be ready for delivery in three to four weeks.

I am, &c.

Capt. H. Dyer, R.A.,  
Secretary.

WILLIAM W. HULSE.

Sackville Street, Manchester,

October 2, 1863.

SIR,

WILL you oblige us by kindly sending to Colonel Boxer a copy of the programme sent to us, as we presume he will have to provide the cartridges, fuses, &c., to be used with our shells in the forthcoming trials.

We propose sending on Wednesday next, the 7th instant, to Woolwich, a 12-pr. gun, with pattern shot and shell, to be tried in the carriages and limbers made in the Royal Carriage Department.

We learn from Mr. Hulse, who has just returned from Woolwich, that the 70-pr. guns will not be required until the trials with the 12-pr. guns are completed; they will, however, soon be ready.

We are, &c.

MANCHESTER ORDNANCE & RIFLE CO.

Capt. H. Dyer, R.A.,  
Secretary.

Sackville Street, Manchester,

December 17, 1863.

SIR,

IN reply to your letter of yesterday, No. 154, Mr. Whitworth desires me to say, that a misunderstanding has arisen about the delivery of the 70-pr. gun, and that he did not intend to imply it had been despatched. I am, however, happy to be able to state that it will be ready, with its ammunition, for the experiments to take place in the ensuing month.

I am, &c.

Capt. H. Dyer, R.A.,  
Secretary.

WILLIAM W. HULSE.

Sackville Street Manchester,

January 12, 1864.

SIR,

WE have to acknowledge receipt of letter No. 7350/9609, dated 9th instant.

We will forward to the Principal Superintendent of Stores at Woolwich bills for the stores which we have supplied for the Armstrong and Whitworth Committee.

In answer to your question as to when the heavy guns we are manufacturing will be ready, we beg to say we expect to begin to deliver them in the course of the ensuing week.

We are, &c.

MANCHESTER ORDNANCE & RIFLE CO.

The Under Secretary of State for War,  
War Office, London.

Sackville Street, Manchester,

January 26, 1864.

SIR,

MR. WHITWORTH requests me to acknowledge your letter No. 182, and to state that in the course of next week he will fix a definite period when the whole of his guns and ammunition, both 12 and 70-prs. will be delivered at Woolwich.

I am, &c.

Capt. H. Dyer, R.A.,  
Secretary.

WILLIAM W. HULSE.

Sackville Street, Manchester,

January 28, 1864.

SIR,

I HAVE to acknowledge the receipt, this afternoon, of letter dated War Office, January 26, 1864, and beg to make the request that 10 rounds of case shot per gun for my 12-pr. muzzle-loader guns may be supplied from the Royal Laboratory for the trials of the Armstrong and Whitworth Committee.

I observe in the copy of letter No. 7663/103, addressed to the Manchester Ordnance Company, enclosed in the above letter, it is stated that "the experiments will take place on the 2nd or 3rd February next." A letter, No. 182, received from the Committee on the 26th instant, states that the Committee have decided not to commence before the whole of the guns and ammunition have been received at Woolwich.

It was previously understood that the trial with the 12-pr. would be completed before those with the 70-pr. commenced, and it is now not possible that the 70-pr. guns and ammunition can be delivered so early.

I am, &c.

The Under Secretary of State,  
War Office.

J. WHITWORTH.

Sackville Street, Manchester,  
February 5, 1864.  
SIR, In accordance with the promise made to the Committee on their visit to our works yesterday, I beg to inform you that the whole of the guns, both 12-pr. and 70-pr., together with the solid shot and common shell, and proof shot, will be delivered here on the 14th March next.  
I am, &c.  
Capt. H. Dyer, R.A.,  
Secretary. JOSEPH WHITWORTH.

I mention the foregoing particulars in order to save confusion, and have communicated with the secretary further upon the subject.

I have, &c.  
The President of the Special  
Committee on Armstrong and  
Whitworth Guns,  
&c. &c. &c.  
109, Victoria Street, S.W.  
H. W. GORDON.

Sackville Street, Manchester,  
March 14, 1864.  
SIR, We beg to advise you of having this day commenced the despatch of the guns and ammunition, with the exception of the shrapnel shells and case shot, for the Armstrong and Whitworth Committee, and will complete the whole by Wednesday. We are sending the common shells to the Royal Laboratory, and the guns and solid shot to the storekeeper, Woolwich.  
We are including six double shot for the proof of the 70-pr. guns, although not ordered. We are also sending five cast-iron flat-front shot to act as pioneers to the more expensive steel flat-fronted shot and shell ordered.  
We are, &c.  
Capt. H. Dyer, R.A.,  
Secretary. Manchester Ordnance and  
Rifle Company.  
NICHOLAS HEALD,  
Secretary.

SIR, Newcastle-on-Tyne, February 26, 1863.

REFERRING to your letter of the 24th instant, I beg to state that the two 12-pr. breech-loading Armstrong guns, which have been ordered in the Royal Gun Factory, were so ordered with my approval for use by the Committee.

One of these guns is an old one which has already resisted an extremely severe course of tests, and which I intended to offer to the Committee for any further trial of endurance they might decide upon making.

The other is a new gun of the present service pattern. When these guns were ordered I was not aware that the Committee would carry on their practice with more than one gun, but as I now learn that three guns will be required for this purpose, I should wish to be authorized to furnish from Elswick two new guns, which, with one of those from Woolwich (viz., the new one), will make up the three required by the Committee.

I should still, however, wish to submit to the Committee the other gun ordered from Woolwich, partly as a spare gun and partly for the purpose of having its endurance further tested if the Committee should so desire.

With regard to the 70-pr., I perceive from the list of ammunition demanded by the Committee, that it is their intention to try these guns against iron plates. Upon this point I feel it necessary to observe that my 70-pr. guns, which weigh 60 cwt., were designed by me as substitutes for the present 32-prs. of 58 cwt., and were never expected to be effective against iron defences. Had they been intended for that service I should certainly have felt it requisite to make the weight considerably greater, but in that case the intention of providing a substitute for the 32-pr. would have been defeated. Mr. Whitworth's 70-pr. is a gun of 80 cwt., and I feel it indispensable that I should supply a 70-pr. of the same weight if it has to be put in comparison with his in experiments against armour plates.

As I understand, however, that Mr. Whitworth will only use a muzzle-loading 70-pr., I should conceive it will not be necessary for me to supply breech-loaders of this extra weight. Perhaps also the Committee would be satisfied to have one of my three muzzle-loading 70-prs. of such a weight as I should deem requisite for operating against plates, leaving the other two to pass as guns of a lighter pattern to fulfil the original intention of furnishing a more powerful gun as a substitute for the present 32-pr. smooth bore.

I have, &c.  
The Secretary, Special  
Whitworth and Armstrong  
Committee. W. G. ARMSTRONG.

January 23, 1865.  
SIR, I HAVE the honour to inform the Armstrong and Whitworth Committee that the trunnion of a 12-pr. Whitworth gun, forwarded to me by Major Young, has been submitted to examination with the view of ascertaining the nature of the metal composing it.

The metal contained a trace of graphitic carbon and a small proportion of combined carbon, slightly above what is found in malleable (wrought) iron of good quality. A polished surface of the metal, when submitted to dissection, furnished evidence of structure which left no doubt that the trunnion did not consist of cast metal, and that it was not originally homogeneous in its character.

The proportion of sulphur in the metal was only minute, but silicon and phosphorus were found in more considerable quantities; of the former 0.18 per cent. was discovered, and the proportion of phosphorus corresponded to 0.15 per cent.

The conclusion to be drawn from the examination of the trunnion is, that it was manufactured of malleable (forged) iron of indifferent quality.

The photographs of the trunnion and the guns will be furnished to the Committee through the Principal Superintendent of Stores, Woolwich, as soon as complete.

I have, &c.  
The Secretary, Armstrong  
and Whitworth Committee. F. A. ABEL,  
Chemist of the War  
Department.

Military Store Office, Woolwich, S.E.,  
February 6, 1863.

SIR, In accordance with the orders of the Secretary of State for War, dated 5/2/63, 7663/30, upon which you are authorized to demand upon me for such stores as you may from time to time require, after the special approval of the War Committee has been obtained;

I have the honour to state that the following orders have already been given for guns, connected with your Committee.

On order 17/1/63, 7663/14, from Royal Gun Factories for Sir W. Armstrong, C.B.:—

Two 110-pr. guns with steel tempered vent pieces.

Two 12-pr. breech-loading guns, with tempered steel breech screws and vent pieces.

From the Elswick Ordnance Company, on order 17/1/63, 7663/6:—

Two 40-pr. with tempered steel linings.

One 12-pr. muzzle loading.

There are also due from the Whitworth Company, on order, 10/1/63, 80/W.743, and /709, three 12-pr. guns of homogeneous metal.

And from the Royal Gun Factories, three 12-pr. brass guns.

SIR, Newcastle-on-Tyne, October 27, 1863.

As all recent experience, both in this country and abroad, has proved that iron plated ships can only be successfully attacked with guns of the largest calibre, and as the 70-pr. guns which have been ordered of Mr. Whitworth and myself can only be regarded as guns fit to be used against timber ships and fortresses of ordinary construction, I beg leave to suggest the expediency of the Committee obtaining authority to order for trial a couple of Whitworth and Armstrong guns of sufficient size to be used with proper effect against targets representing the sides of iron plated ships.

The guns which I recommend for this purpose are,—

1st. A rifled gun of 6½ tons weight, with a calibre equal to that of the 68-pr., so as to be capable of utilizing, if desired, the spherical projectiles of that gun. This gun I propose as a broadside gun, and I believe it will be the lightest that will be found decisively effective against armour plates.

2nd. A rifled gun of 12 tons, having a bore of 10 inches, to suit the spherical projectiles of the present 10-inch

smooth-bore guns. This I propose as a gun adapted for cupola ships and batteries.

I have, &c.

The Secretary, Special  
Armstrong and Whitworth  
Committee.

W. G. ARMSTRONG.

8, Great George Street, Westminster,  
January 25, 1864.

SIR,

THE Committee are aware that the guns and ammunition demanded of me by the Committee for the competitive trials with Mr. Whitworth's guns, were reported ready for delivery in April 1863; and that the guns and ammunition have since been delivered to the Committee in accordance with their desire.

I am informed that it is the intention of the Committee to commence their experiments forthwith. I beg therefore to inquire whether Mr. Whitworth has delivered the 12-pr. and 70-pr. guns and ammunition required by the Committee for the purposes of their trials. It appears to me necessary that each competitor should deliver to the Committee all that is requisite for fully carrying out the Committee's programme of trial *before the commencement of the trials*, as a security against change and delay during the trials, and as a pledge for their not being discontinued after partial results have been obtained. The obligation to deliver all the guns and ammunition having been enforced upon me, it is obvious that it should also be enforced upon Mr. Whitworth.

I may remind the Committee that they have declined my request to permit the trials to be extended to guns of larger dimensions than the 70-pr., and I therefore feel the more entitled to ask for a guarantee, before the experiments begin, that at all events the 70-pr. shall be tried.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee.

W. G. ARMSTRONG.

8, Great George Street, Westminster,  
January 25, 1864.

SIR,

I AM informed that the Committee have recently determined to test the fuzes to be used in the forthcoming trials in a manner lately devised by Col. Boxer, viz. by jolting them in a special machine.

I beg to observe that the fuzes already delivered by me have been designed without reference to such a test. They have been prepared to endure the Government test of two falls upon iron from a height of 30 feet, and are in this respect like the service fuzes, which, by the express wish of the authorities, are made as sensitive as possible within the limits of the above test, in order that they may explode with certainty when fired with very low charges. If the Committee have decided upon employing the new test of Col. Boxer, introduced since my fuzes were delivered, I shall be glad of an opportunity of supplying them with fuzes more adapted to endure it than those now in the hands of the Committee. I do not propose to withdraw the present fuzes, but only to substitute altered ones in the event of the Committee not having had occasion to use any fuzes before the substitution can take place. If the Committee determine to proceed with the present fuzes the tests which were in existence when the fuzes were delivered should alone be applied. In order to fit the fuzes for the new test no other alteration will be needed than a slight modification of the igniting pellet.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee.

W. G. ARMSTRONG.

Immediate.

War Office, February 27, 1864.

SIR,

I AM directed by Earl de Grey and Ripon to inform you that with the concurrence of the Lords Commissioners of the Admiralty he has decided the competitive trial of the Armstrong and Whitworth guns must commence not later than the 1st of April next, and that it is to be carried on from day to day until it is finished.

If the competing guns, with all their ammunition, are not on the ground by the 1st of April, the inventor whose gun, or ammunition, or any part of it, has not been delivered, will be regarded by Earl de Grey and Ripon as having declined to enter the competition.

I am, &c.

The President of the  
Armstrong and Whitworth Committee.

J. ST. GEORGE, Major-Gen.,  
Director of Ordnance.

Royal Hotel, Southend,  
April 6, 1864.

SIR,

I UNDERSTAND that Col. Boxer, Superintendent of the Royal Laboratory, has made application to the Committee to be allowed to withdraw for experiment some of the ammunition supplied by him for Mr. Whitworth's guns.

The Committee are aware that Col. Boxer is in reality my competitor with respect to the ammunition in question, and there is therefore quite as much objection to Col. Boxer's withdrawing part of his ammunition as there would be to Mr. Whitworth's withdrawing one of his guns.

Considering that all the experiments connected with the ammunition for my shunt 12-pr. gun have been made at the expense of the firm to which I belong, while for the new ammunition specially prepared for the experiments with Mr. Whitworth's guns all the resources of the Royal Laboratory have been made available at the Government expense, I feel justified in objecting to any interference with any part of the material supplied for the present competitive trials.

I have, &c.

To the Secretary, Armstrong  
and Whitworth Committee.

W. G. ARMSTRONG.

Royal Laboratory, Woolwich, S.E.,  
April 29, 1864.

SIR,

As I am responsible for the fuzes and shrapnel shells which have been furnished for the Whitworth guns, I venture to offer the following remarks for your consideration.

I presume that the object of the experiments which are now being carried out by the Armstrong and Whitworth Committee, is to obtain the necessary data to determine the relative efficiency of *each separate portion* of the equipment submitted by Sir W. Armstrong and Mr. Whitworth.

With respect to that portion for which I am answerable, no satisfactory conclusions can, in my opinion, be arrived at unless the following arrangements are adopted:—

1st. The trial of fuzes should, as far as possible, be kept distinct from the trial of shells, and when combined, the results should be recorded in such a way that the errors due to the one may be eliminated from those due to the other.

2ndly. Each description of fuze should be tried separately, and when the object is to determine the relative efficiency of different description of fuzes for specific purposes, the conditions should be varied to correspond in some degree with the circumstances likely to attend their employment in actual warfare.

3rdly. In the trial of common shells, the same number of hits and bursts should be obtained in each case, independently of the number of rounds fired; and when the effect depends materially upon the projectile striking a particular part of the obstacle, the hits should be made to correspond in this respect.

4thly. In the trial of shrapnel and segment shells the position of the targets should be varied to represent the different formations of troops, boats, &c., also the effect of varying, within reasonable limits, the distance of the burst from the targets, and the elevation of the gun at each range should be carefully ascertained; moreover, in order to ascertain the relative efficiency of shrapnel and segment shells fitted with time and concussion fuzes, the targets should be placed upon ground such as that ordinarily met with in the field.

The importance of adopting this course must be evident when the following circumstances are duly considered:—

1stly. In actual warfare the distance of the object will seldom be known with sufficient accuracy to ensure perfection, either in the elevation of the gun or in the adjustment of the fuze.

2ndly. When the range is known, the same accuracy in elevating the gun and in adjusting the fuze which is attained at target practice, cannot reasonably be expected in the field; and—

3rdly. On service the ground will seldom be of the favourable character for the action of shrapnels fitted with concussion fuzes, which is obtained on certain portions of the range at Shoeburyness.

I beg to point out that in designing the shrapnel for the Whitworth gun, my object was not to produce a great show upon a target under exceptional conditions; but to obtain an average good result under such circumstances as are likely to arise in warfare, and I am naturally anxious that this quality should be properly and fairly tested.

In the trials which were made against earthworks, the effects produced by the shrapnel from the Whitworth gun and the segment shell from the Armstrong gun are, *apart from other circumstances attending the practice*, exceedingly likely to mislead.

In firing at the abbatiss in front of the work, the only real damage was done by two of the segment shell from the muzzle-loading Armstrong, and two from the Armstrong breech-loader; but from a careful inspection of the work it appeared that the superior effect produced by the segment shell from the Armstrong guns was not due to any peculiarity in the arrangement of this particular projectile, but was caused by the segment shells having struck in the only spot where real damage could be effected, whilst the shrapnel from the Whitworth had failed, from some accidental cause, to strike in a favourable spot.

The same remark applies to the experiments against the brick walls, where the strikes from the Whitworth gun were much fewer than those from the Armstrong gun, not from any defect in the shells, but from a defect in the laying of the gun. All the common shells which struck the wall acted perfectly, whilst the shrapnel did quite as much as could be expected from these projectiles under the circumstances.

If there had been the same number of hits with the Whitworth as with the Armstrong shells, the effects produced upon the walls, and upon the targets behind, would have been the same or nearly so in each case.

In conclusion, I beg to assure the Committee that in offering these remarks for their consideration, my only desire is, that the shell and fuzes which I have designed for the Whitworth gun may be tested in a way to prove whether they possess those qualities which are essential to their successful employment in the field.

I have, &c.

Major-General R. Rumley,  
President of the Armstrong  
and Whitworth Committee.

E. M. BOXER,  
Supt. R.L.

Royal Hotel, Southend,  
June 16, 1864.

SIR,

It has come to my knowledge that the Boxer shells used in the experiments now in progress are differently charged for bursting at long and short distances from the targets. At the long distances the small charge is used, which merely throws out the bullets without bursting the shell or causing much dispersion. At the short distances a higher charge is used, which bursts the shells and produces many fragments and much dispersion.

In practice with time fuzes, which the present experiments are intended to represent, the variation of distance at which the shell explodes is due to the recognized irregularity of the fuze. The accident therefore of a shell bursting either too near or too distant, cannot be provided for by a previous adaptation of the charge to suit the event. By the use of screens and percussion fuzes the Committee have for convenience eliminated the uncertainty of the bursting point, and have thereby, unintentionally I believe, given Col. Boxer the opportunity of employing alternative modes of bursting his shells, which in practice would be rendered futile by the uncertainty of the fuze.

It appears to me that the shells never would be *designedly* burst at the unfavourable distances which the Committee are prescribing, but, even if any condition of service can be defined, which would render it expedient to endeavour to make the time fuze take effect at those distances, and with a variable bursting charge, it must obviously create confusion and misapprehension in the present experiments to mix up the two objects in one series.

For these reasons I consider that the results of the experiments in question are up to this point of no value as representing the effect of Col. Boxer's shell under the conditions of actual service, and I am very reluctantly obliged to request that a choice may be made between the two bursting charges used in these experiments, and that the rounds fired with the rejected charge shall be expunged from the records.

I have only to add that I communicated verbally to members of the Committee my objection to the variation of the bursting charge in the Boxer shell, the moment I had reason to suppose that such variations had been made.

I have, &c.

The Secretary, Special  
Armstrong and  
Whitworth Committee.

W. G. ARMSTRONG.

Minute Paper. 7663/219, 10/9/64.

LORD HARTINGTON,

WILL you approve of permission being given to Sir W. Armstrong to have 20 shells, of the pattern made by Col. Boxer for Mr. Whitworth, manufactured in the Royal Laboratory. It will be an interesting experiment, and I recommend it.

22/9.

(Signed) H. M.

PT. A. AND W. COM.,

WILL you give your opinion. If you see no objection the shells will be ordered.

24/9.

(Signed) H. M.

LORD DE GREY,

N, 14/9.

I SHOULD like to know the opinion of the Committee on this subject direct from themselves. I should have no objection to the experiment, if they have none, but I should wish to leave the matter entirely in their hands.

18/9/64.

(Signed) DE GREY.

D.O.,

THE Committee purposely abstained from any interference with regard to the supply of Col. Boxer's shells, as requested by Sir W. Armstrong, and only expressed their readiness to carry out the experiments in the event of Sir William Armstrong obtaining the necessary authority for the supply.

27/9/64.

(Signed) R. RUMLEY,  
M. Gen. and Pres.

LORD HARTINGTON,

THESE shells will be fired as part of the 200 rounds which the inventors are to be allowed to fire at the end of the trial with such projectiles as they may think proper, to develop the capabilities of their respective systems. As the Committee do not raise any objection, and as the time presses, perhaps you will give an early decision.

28/9.

(Signed) H. M.

The shells may be ordered.

1/10.

(Signed) N.

Colonel Boxer will be directed to make the shells, and request him to communicate with Col. Batun on the subject.

3/10.

(Signed) H. M.

SIR,

Newcastle upon Tyne, September 10, 1864.

HAVING lately applied to the Special Armstrong and Whitworth Committee for permission to fire 20 of Col. Boxer's elongated shrapnel shell from my 12-pr. shunt gun, in order to show that, apart from the question of the comparative efficacy of that shell and my own, it was equally applicable to both forms of gun, I have received a reply that the Committee have no objection. They observe, however, that it will be necessary for me to obtain the authority of the Secretary of State for this purpose, as well as to enable me to communicate with Colonel Boxer with respect to the supply.

I have the honour therefore to request that the necessary authority may be granted.

I have, &c.

(Signed) W. G. ARMSTRONG.

The Under Secretary of State,  
War Office.

SIR,

Dovercourt, August 29, 1864.

In reply to your memorandum of the 24th instant, I have the honour to state, for the information of the Armstrong and Whitworth Committee, that the principle I have adopted in the construction of the shrapnel for the Whitworth gun can be readily applied to shells for the Armstrong gun, or indeed to any system of rifled ordnance; and further, that I shall be ready to work out the details of a shrapnel for the Armstrong guns, if the Secretary of State for War wishes me to do so.

I have, &c.

Major Dyer, R.A.,  
Secretary, A. & W. Committee.

E. M. BOXER,  
Lieut.-Col., R.A.

Minute Paper. 7663/238, 27/10/64.

MY LORD, 28, Pall Mall, October 27, 1864.

I AM informed that after your Lordship's reference of Sir W. Armstrong's application for the use of my shrap-

nel shell with his shunt gun to the Armstrong and Whitworth Committee, and after their reply that they purposely declined interfering in the matter, on a renewed application by Sir W. Armstrong the desired permission has been granted. Permit me to point out that the shrapnel shell is an important part of the system of artillery with which I am competing against Sir W. Armstrong, and that to hand over the use of it to him does not seem to me to be fair treatment on the part of the War Office.

I am sure your Lordship will not consider me discourteous in saying so, for the shell stands exactly on the same footing as my case shot and rifled spheres. I have had great success with these, and should consider myself grievously injured by any act of authority which permitted Sir W. Armstrong to use them against me in this competition.

I am, &c.

The Right Honourable JOSEPH WHITWORTH.  
the Earl de Grey and Ripon,  
&c. &c. &c.

SIR,

I AM directed by the Secretary of State for War to acknowledge the receipt of your letter of the 27th instant, in which you complain that Sir W. Armstrong has been permitted to use your shell with his shunt gun in the trials conducted by the Armstrong and Whitworth Committee. His Lordship desires me to inform you that on the application of Sir W. Armstrong to be allowed to fire 20 of Colonel Boxer's elongated shrapnel shells, to show their applicability to guns of his construction, Earl de Grey and Ripon saw no reason to refuse the permission asked; but, upon receipt of the letter under acknowledgment, in which you claim the shell in question as yours, Earl de Grey and Ripon requested that Colonel Boxer should be called upon to state whether this shell was properly designated Boxer's shell; and I have to enclose you a copy of his reply.

Under these circumstances, his Lordship does not consider it would be fair to refuse to one competitor the advantage which has been allowed to the other of using the invention of a Government officer.

(Signed) J. ST. G.

Ask Colonel Boxer to state whether these elongated shrapnel shells are properly designated as his shells, or whether they are the invention of Mr. Whitworth.

28/10.

(Signed) J. ST. G.

Minute Paper. 7663/239, 29/10/64.

Immediate.

No. 1427, 72/3.

SIR,

Royal Laboratory, Woolwich, S.E.,  
October 29, 1864.

In reply to your letter of yesterday's date, 7663/238, I have the honour to inform you that the shells I am now making, at the request of the Secretary of State, for Mr. Whitworth, are properly designated "Boxer's" shells, and are not the invention of Mr. Whitworth.

These shells are precisely similar in principle to my diaphragm shrapnel shell, and the particular arrangements carried out in their construction were designated by me in 1859.

At the request of Earl de Grey and Ripon, when his Lordship was Under Secretary of State, I assisted Mr. Whitworth in perfecting his system of ordnance, in relation to fuzes and shrapnel, and I then applied the principle of construction to a shrapnel for the Whitworth gun.

Mr. Whitworth has never claimed this shell as his invention, and I am sure he has no desire to do so.

I have, &c.

The Director of Ordnance, E. M. BOXER,  
War Office. Supt. Royal Laboratory.

LORD DE GREY,

THIS is Colonel Boxer's reply. It is evident that Mr. Whitworth is in error in calling it his shrapnel shell, and he does not seem to have any just cause of complaint.

(Signed) J. ST. G.

29/10/64.

See my Minute.

(Signed) DE GREY.

31/10/64.

SIR,

War Office, December 6, 1864.

I AM directed by Earl de Grey and Ripon to acknowledge the receipt of your letter of the 24th November, in which you urge further objections to the use by Sir Wm. Armstrong, in the trials conducted by the Armstrong and Whitworth Committee, of the shrapnel shells similar in construction to those which have been fired from your guns.

The letter from Lieut.-Col. Boxer, of which a copy accompanied the letter addressed to you from this office on the 2nd November, 7663/238, shows that that officer claims the invention of this shell as his own; and Lord de Grey cannot, under these circumstances, admit any claim on your part to preclude his Lordship from making any use, required by the public service, of shells of this construction.

Lord de Grey, is, however, of opinion that the argument which you deduce from the fact that, when shells of this description were first manufactured in the Royal Laboratory in 1861 you were required to bear the expenses connected with their preparation, is entitled to weight, so far as the present competitive trials between Sir Wm. Armstrong and yourself are concerned.

His Lordship also considers that you are entitled to claim the same treatment in all respects in regard to the limit fixed for sending in ammunition for the experiments of the Armstrong and Whitworth Committee as has been accorded to Sir Wm. Armstrong, and that, consequently, if the permission to use these shells involves an extension of that limit in favour of Sir Wm. Armstrong, you may justly ask either that a similar extension should be granted to you, or that the permission given to Sir Wm. Armstrong should be withdrawn.

It would be highly undesirable indefinitely to postpone the conclusion of the inquiry with which the Armstrong and Whitworth Committee are charged by the adoption of the latter course, and Lord de Grey has determined, upon a full review of the circumstances of the case, not to allow the shrapnel shells prepared by Col. Boxer to be used with Sir Wm. Armstrong's guns in the trials before the Armstrong and Whitworth Committee.

I have, &c.

(Signed) J. ST. GEORGE, Major-General,  
J. Whitworth, Esq., Director of Ordnance.  
28, Pall Mall.

SIR,

War Office, December 6, 1864.

WITH reference to your letter of the 10th September 1864, in which you request that 20 of Col. Boxer's elongated shrapnel shell may be made in the Royal Laboratory with a view to their being fired from your 12-pr. shunt gun in the Armstrong and Whitworth competitive trials, and the reply thereto of the 3rd October, in which the permission you request is granted by the Secretary of State for War, I am directed by Earl de Grey and Ripon to inform you, that it having been brought to his notice that the shells in question cannot be supplied in accordance with the terms of the letter addressed to you on the 19th September, in which the 1st October was named as the last day on which ammunition could be received for the purposes of the competitive trial; and further, considering the fact that it was decided in 1861 that the expense of experiments carried on in perfecting the shrapnel shell for use with Mr. Whitworth's gun should be borne by that gentleman, his Lordship regrets to be obliged to withdraw the permission given for the use of the shells with your guns before the Armstrong and Whitworth Committee.

(Signed) J. ST. GEORGE, Major-General,  
Director of Ordnance.

Sir Wm. Armstrong, C.B.,  
Elswick, Newcastle-on-Tyne.

SIR,

Newcastle-upon-Tyne, October 17, 1864,

COL. BOXER, who has been authorized by the War Office to prepare 20 of his elongated shrapnel shells adapted for my 12-pr. shunt gun, has written to say that, to enable him to prepare these shells, it will be necessary for him to fire some trial ones from a shunt gun of this calibre. I shall feel obliged, therefore, if the Committee will allow him the use of the B or C 12-pr. shunt gun now in their hands, in order that he may make the necessary trials.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. W. G. ARMSTRONG.

SIR, Bexhill, October 19, 1864.

IN your letter to me of the 17th instant you state that two different descriptions of common shell are not to be used with Mr. Whitworth's 70-pr. gun. I beg therefore to observe that the common shell now being used with that gun differs altogether in weight and dimensions from that used with the gun during 85 rounds fired in the competitive trials at Shoeburyness on the 7th and 9th ultimo and recorded by the Committee.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. per W. G. ARMSTRONG,  
STUART RENDEL.

Minute by Committee.

Write to Mr. Rendel to say that although these rounds have been fired with a different shell, as stated by him, the Committee in authorizing the use of the shell since fired from Mr. Whitworth's gun had determined that the 85 rounds in question should be excluded from all consideration in weighing the merits of the different systems of artillery.

SIR, Newcastle-upon-Tyne, October 19, 1864.

I HAVE just heard that the Committee have put in competition 12-pr. case shot, supplied by me prior to the 1st April last, with that which has been perfected by Mr. Whitworth, assisted by the Royal Laboratory, pending the present trials, and delivered by him at a very recent period. I was led to understand that no ammunition would be received by the Committee after the 1st April, and I therefore deemed it useless to carry on experiments for the purposes of these trials with any form of projectile. I beg further to state that I have not the smallest doubt that the case shot for my guns might, if time were allowed me for experiments, be greatly increased in efficiency, and I trust it will not be assumed that the case shot delivered in April last is the best that could have been brought forward if I had been at liberty to delay its delivery until the present time.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. W. G. ARMSTRONG.

SIR, Shoeburyness, October 26, 1864.

WITH reference to the firing which is about to take place with shot which have been subjected to rough usage, I have the honour to point out that the lead-coated projectiles underwent this treatment in association with both Mr. Whitworth's angular shot and those for the shunt gun.

It will be obvious that the effect of this treatment has been at once to damage the softer projectiles more than would have been the case had they been packed with projectiles only of the same nature, and to cushion and to that extent save from injury the harder projectiles.

I have, therefore, the honour to request that the Committee will take these circumstances into consideration, and attach a note with respect to them in their proceedings.

I have, &c.

Major Dyer, R.A. per W. G. ARMSTRONG,  
&c. &c. H. NOBLE.

SIR, Newcastle-upon-Tyne, November 1, 1864.

I HAVE to acknowledge the receipt of your letter of the 28th October, in which you state that every latitude having been afforded to the competitors, by placing at their disposal 200 additional rounds, the Committee consider I ought to have availed myself of the liberty so given in bringing forward any improved pattern of case shot which I might have to propose.

In reply, I beg leave to observe that if Mr. Whitworth's case shot had been brought forward as part of his additional rounds, and tried under his separate programme, I could have had no reason to object; but what I complained of was that case shot delivered by me before the 1st of April last, as required by the Committee, were tried by them, *competitively*, against case shot delivered by Mr. Whitworth at a much later date, and resulting from experiments made during the trials.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. W. G. ARMSTRONG.

SIR, Newcastle-upon-Tyne, November 7, 1864.

REFERRING to your letter of the 1st instant, I beg to observe that although the Committee may have no record of my having applied to make a slight increase in the windage in the 70-pounder muzzle-loading projectiles, I feel sure that it will be in the recollection of some of the members that a verbal application to that effect was made. It was not put in writing because I was given to understand that it could not be entertained, and because I was quite aware that the rule of no alteration was at that time in full force.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. W. G. ARMSTRONG.

SIR, Newcastle-upon-Tyne, November 17, 1864.

ON the 13th October last I addressed a letter to you, stating that it was impossible for me to acquiesce in Mr. Whitworth being allowed to use one form of common shell for range and accuracy and another for distinctive effect, unless the same privilege were extended to myself. In reply I was informed that it was a mistake to suppose that there was any intention of permitting Mr. Whitworth to use two patterns of common shell, and that in the experiments which were then forthcoming he would be confined to one.

Notwithstanding this assurance, I find that in the recent experiments at Portsmouth, to test destructive effect against the "Alfred" target ship, Mr. Whitworth has been allowed to use two forms of common shell, the one being that previously tried for range and accuracy and the other being a lengthened shell containing a greatly increased bursting charge. I can scarcely suppose that the Committee will justify this proceeding upon the ground that they do not regard their trial of Mr. Whitworth's lengthened shell as competitive with my *unlengthened* shell, for it is clear that shells fired on the same occasion and against the same object cannot fail to be generally regarded as comparative, and indicative of the relative destructiveness of Mr. Whitworth's shells and mine.

The simple fact of the case is that Mr. Whitworth has, in the course of the trials made by the Committee, been allowed to use three distinct patterns of common shell, while I have been restricted to one, and the advantage of such a latitude in Mr. Whitworth's case is too obvious to require comment.

I shall feel obliged if the Committee will favour me with an explanation of the reasons which have induced them to give this latitude to Mr. Whitworth, and have led them to depart from their announced intention of restricting him to one pattern.

Referring also to my letter of the 1st instant, I have the honour to request that you will inform me what action the Committee have taken as regards the remonstrance contained in that letter.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. W. G. ARMSTRONG.

SIR, Shoeburyness, November 21, 1864.

I AM informed that the Committee have decided on discontinuing their experiments with live shrapnel shell from the 70-pr. in the marshes. I beg, therefore, to request that the incomplete practice in the marshes with my muzzle-loading 70-pr. may be struck out of the Committee's records, inasmuch as there can be no practice in the marshes with the other 70-pr. with which the former practice can be compared.

I may observe also that in the practice with my muzzle-loading 70-pr. referred to above, the wrong fuze was employed, and that the bursting charge used was that intended for naval service only, and not what I should prescribe for land service. I may further add, that in recording the effect of the 70-pr. shrapnel shell a rule appears to have been followed in the marshes different to that adopted subsequently on the sands. On the marshes direct hits were not taken into account.

I have, &c.

The Secretary, Armstrong  
and Whitworth Committee. W. G. ARMSTRONG,  
per H. NOBLE.

SIR, Newcastle-upon-Tyne, December 16, 1864.  
I HAVE the honour to acknowledge the receipt of your letter (No. 79) of the 28th ulto., from which I collect that the Committee are under the impression that it was open to me up to the 1st October last to supply new patterns of ammunition. The Committee will recollect that the competitors were desired in April last to select patterns from each of the various kinds of ammunition, and were informed that no deviation from those patterns would be permitted. No communication to the contrary was ever made to me, and I have never felt myself at liberty to bring forward any modified form of projectile to be used competitively in the present trials.

I do not wish in any degree to restrict the investigations of the Committee respecting the various forms of ammunition which have been submitted for trial with the Whitworth guns, and only ask that experiments made with projectiles recently supplied by or for Mr. Whitworth may not be deemed competitive with projectiles supplied by me prior to April last. To this end I would beg leave to suggest that all such experiments might properly be embodied in the Appendix, so as to be kept distinct from the competition.

With this suggestion I leave the matter in the hands of the Committee.

I have, &c.

The Secretary, Armstrong and Whitworth Committee. W. G. ARMSTRONG.

Elswick Ordnance Works.

SIR, Newcastle-upon-Tyne, May 29, 1865.  
WITH reference to your request that we should furnish to you for the information of the Armstrong and Whitworth Committee, the actual cost of rifling the projectiles for the 12-pr. muzzle-loading shunt gun, we have the honour to enclose herewith a statement showing the exact cost of the process as carried out in the presence of the Committee.

This statement is marked A, and with regard to it we beg to remark that the Committee will observe that the value of the raw material is only 2s. 4d., while the cost of converting it into the form of studs is 3s. 9½d. This high rate must, however, be regarded as due to the imperfect process which has as yet been adopted, and, as an illustration of the very great economy which may be expected to result when the manufacture is properly established, we may adduce the case of the process of making lead bullets in the Royal Arsenal, where the cost of labour is only 1d. per 800 bullets. Zinc studs could of course be made in an analogous manner.

We also enclose a statement marked B, showing the actual cost of rifling 100 12-pr. segment shell when the holes are drilled and under-cut, and when copper studs are

used. We may observe that this statement represents the exact cost for the last supply of segment shell made for the Committee.

We have, &c.

The Secretary, Armstrong and Whitworth Committee. W. G. ARMSTRONG & Co.

A.

PRESENT COST of rifling 100 12-pr. segment shell, showing the total labour and material expended in fitting them with studs suitable for the shunt form of rifling, viz.:—

|                                            | s. | d.   |
|--------------------------------------------|----|------|
| Material                                   | -  | 2 4  |
| Labour, preparing material                 | -  | 1 8  |
| Labour, making studs (piece price)         | -  | 2 1½ |
| Labour, putting in studs (piece price)     | -  | 3 0  |
| Labour, pressing through die (piece price) | -  | 0 8½ |
| Total                                      | -  | 9 10 |

W. G. ARMSTRONG & Co.

B.

COST of rifling 100 12-pr. segment shell (holes drilled and undercut, and copper studs used), showing the total labour and material expended in fitting them with studs suitable for the shunt form of rifling, viz.:—

W. G. ARMSTRONG & Co.

44, Charlton Street, Manchester,  
June 1, 1865.

SIR, REFERRING to the interview which Mr. Whitworth had with the President on Monday last, we now beg to forward you the accompanying Schedules of the prices at which we are supplying our patent rifled steel guns and ammunition. We may add that these prices might be considerably reduced if we had to supply either the guns or ammunition in large quantities.

We are, &c.

The Whitworth Company, Limited.  
Major Dyer, R.A.,  
109, Victoria Street,  
Westminster, S.W. W. J. HOYLE,  
Secretary.

44, Charlton Street, Manchester,  
1st June 1865.

# SPECIFICATION of the Whitworth Patent Muzzle-loading Tempered Steel Rifled Guns, Appurtenances, and Ammunition.

|                                                                          | 1-Pr.   | 3-Pr.   | 4-Pr.   | 6-Pr.   | 9-Pr.   | 12-Pr.  |

The Secretary, Special Armstrong and Whitworth Committee,  
109, Victoria Street, Westminster, S.W.

The Whitworth Company, Limited.  
W. J. HOYLE, Secretary.

SIR, Newcastle-upon-Tyne, April 8, 1865.

WITH respect to the prices at which the Elswick Company are manufacturing muzzle-loading guns I have the honour to inform you that they are now tendering for, and supplying the same, at rates varying as under, according to terms of payment, number ordered, and other conditions of contract, viz. :—

|              |          |       |
|--------------|----------|-------|
|              | £        | £     |
| 12-prs. from | 135 to   | 150   |
| 40-prs. "    | 315 to   | 385   |
| 70-prs. "    | 550 to   | 650   |
| 150-prs. "   | 945 to   | 1,100 |
| 300-prs. "   | 1,620 to | 1,800 |
| 600-prs. "   | 3,700 to | 4,000 |

The above prices include sights and browning.

These guns are steel-barrelled coil guns. The 70-prs. are of a rather stronger and heavier pattern than the muzzle-loading 70-prs. supplied to the Committee.

I have, &c.

The Secretary, Armstrong and Whitworth Committee. W. G. ARMSTRONG.

penses, if made in large quantities, would be as follows, viz. :—

|                                                              |                |
|--------------------------------------------------------------|----------------|
|                                                              | Per 100.       |
| Shells, segment, for Armstrong 12-pr. B.-L. gun              | £ s. d. 11 1 0 |
| Bursters for do. - - - - "                                   | 1 11 9         |
| Fuzes, E., time - - - - "                                    | 4 13 11        |
| " percussion - - - - "                                       | 3 6 6          |
| Shells, Boxer's shrapnel, for 12-pr. Whitworth gun - - - - " | 13 19 9        |
| Bursters for do. - - - - "                                   | 0 6 8          |
| Fuzes, time, for do. - - - - "                               | 2 8 8          |
| " concussion do. - - - - "                                   | 2 11 2         |

No segment shells for 12-pr. Armstrong muzzle-loading guns have been made in this department.

I am, &c.

Major Dyer, R.A., Secretary, E. M. BOXER,  
Armstrong and Whitworth Committee, Supt. R.L.  
109, Victoria Street, S.W.

IR, Newcastle-upon-Tyne, April 8, 1865.

I HAVE the honour to give below the prices at which the Elswick Company have been and are supplying the under-mentioned projectiles for muzzle-loading guns, the prices varying according to the numbers required and other conditions of the contract, viz. :—

|                             |          |           |
|-----------------------------|----------|-----------|
|                             | s. d.    | s. d.     |
| 12-pr. { segment shell from | 2 10 to  | 4 0 each. |
| { common do. "              | 2 7 to   | 3 6 "     |
| 40-pr. { segment shell "    | 8 6 to   | 10 9 "    |
| { common do. "              | 7 6 to   | 9 0 "     |
| 70-pr. { segment shell "    | 13 6 to  | 18 0 "    |
| { common do. "              | 12 0 to  | 15 0 "    |
| 150-pr. { segment shell "   | 27 0 to  | 35 0 "    |
| { common do. "              | 23 5 to  | 30 0 "    |
| 300-pr. { segment shell "   | 50 0 to  | 60 0 "    |
| { common do. "              | 44 0 to  | 50 0 "    |
| 600-pr. { segment shell "   | 108 0 to | 120 0 "   |
| { common do. "              | 90 0 to  | 100 0 "   |

I have, &c.

The Secretary, Armstrong and Whitworth Committee. W. G. ARMSTRONG.

Royal Laboratory, Woolwich, S.E.,  
April 10, 1865.

WITH reference to your letter of 25th ult. I beg to state, for the information of the Armstrong and Whitworth Committee, that the cost of the under-mentioned articles for labour and materials, exclusive of any contingent ex-

July 20, 1865.

MEMORANDUM for the SECRETARY of the ARMSTRONG and WHITWORTH COMMITTEE.

SAMPLES taken from the steel barrels of the 12-pr. competitive guns, which were tested to destruction, have been submitted to analysis, and the following are the per-centage results obtained :—

F. A. ABEL,  
Chemist of the War Department.

SIR, April 26, 1864.

As there appears to be some doubt whether both Armstrong and Whitworth guns are sighted in the same manner, I have the honour to request, by direction of the Committee, that you will be good enough to send a competent person to Shoeburyness on Friday next to verify the sights of these 12-pr. guns.

I am, &c.

Col. Campbell, R.A., (Signed) H. DYER, Major R.A.  
Supt. Royal Gun Factory. Secretary.

MAJOR DYER,

As this service is pressing, I have put it in hand; but it will be necessary for me to be furnished with an authority to quote for the expenditure, and also to know to what vote it is to be charged.

(Signed) H. CAMPBELL,  
Colonel R.A.

R. G. F.—29/4/64.

SUPT. ROYAL GUN FACTORY,

I HAVE applied to the D.O. for authority.

(Signed) H. DYER,  
Major R.A.

2/5/64.

SIR,

Royal Gun Factory, May 2, 1864.

MAJOR DYER having made an application by letter, dated 26th April, for a competent person to attend at Shoeburyness to verify the sights of the Armstrong and Whitworth guns under trial by the Armstrong and Whitworth Committee, I have the honour to report that a competent person of this department has attended and examined the guns, and that he reports as follows:—

"No. 264, Whitworth Muzzle-loader,

"Radius from hind to foresight - - 38·45

"Length of scale for 10 degrees - - 6·8

"When laid point blank by the sight on the right of gun it requires a packing on the trunnion sight of ·03 of an inch, equal about 3 minutes of permanent elevation, this is the side used in firing, but on trying the left side it was found to require the same packing on the tangent scale, thus giving about 3 minutes depression, showing the sight ring not to have been put on level.

"I would also beg to remark that this sight is not the one verified before the guns left the Royal Arsenal, which one I obtained from Major Dyer, and tried on; in doing so I found the cascable or breech piece, on which the sight ring is fixed, had been removed, and not put up again to the same mark at which it had originally been, and which I consider was the cause of the error.

"No. 52, Armstrong Muzzle-loader,

"Radius from hind to foresight - - 26"

"Length of scale for 10 degrees - - 4·58

"When put at point blank this gun required a packing of ·03 of an inch under the tangent sight, giving a depression of about 3½ minutes, making a difference of 6½ minutes between this gun and No. 264. This error was caused by the wrong trunnion sight having been taken into use with this gun, and a piece of oakum being placed between the top of the collar and the shoulder of the sight to keep it fast in its place; on trying the right trunnion sight I found the collar to have started up, so as to show a depression of about one minute.

"No. 38, Breech-loading Armstrong,

"Radius from hind to foresight - - 30·8

"Length of scale for 10 degrees - - 5·43

"This gun when put at point blank required a packing of ·01 of an inch under the tangent sight equal to about one minute of depression, which is to be accounted for by the block through which the tangent scale works having gone down in firing, which causes a difference between this gun and No. 264 of about four minutes."

I have, &c.

The Director of Ordnance,  
War Office, Pall Mall.

JOHN ANDERSON,  
Assistant Superintendent.

*Extract from Letter from Mr. Whitworth dated April 8, 1865.*

With regard to the destruction of my 12-pounder gun, I consider that it would have stood many more rounds if the firing had been continued on the Monday, when it had already stood 29 rounds more than the shunt gun, and 39 more than the Armstrong breech-loader. But owing to the gun being exposed to 6° of frost during the night its state and condition were entirely changed. The gun should have been fired the following morning with single charges until it had attained about the same temperature as it was on the preceding evening.

Minute 3/9.

War Office,

January 9, 1863.

SIR,

WITH reference to the evidence you gave before the Committee I am directed to forward the amended tabular form, with the request you will be good enough to fill up the several columns and add any other information that may suggest itself to you, respecting the guns you propose to submit to the Committee.

I am also directed to request you will be good enough to forward working drawings and specifications of the guns and ammunition with an estimate of the cost of each article, to enable the Committee to obtain the sanction of the Secretary of State for War for carrying on the necessary experiments.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Secretary.  
Sir W. Armstrong, C.B.,  
8, Great George Street, S.W.

Minute 3/9.

War Office,

January 9, 1863.

SIR,

REFERRING to my letter, Minute 2/1, dated 6th January, I am directed by the Committee to request you will substitute the annexed form, and be good enough to fill up the several columns with the information connected with the guns and ammunition you propose to submit to the Committee, and that you will also forward as early as possible detailed working drawings and specifications, accompanied by an estimate of the cost of the guns and ammunition you propose, that no time may be lost in obtaining the sanction of the Secretary of State for War, for carrying on the necessary experiments.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Secretary.

P.S. The Committee request you will be good enough to prepare the drawings of guns ½ scale (3 inches to a foot). The projectiles full scale. The fuzes twice actual size.

Joseph Whitworth, Esq.,  
28, Pall Mall, London.

Minute 7/1.

109, Victoria Street, Westminster, S.W.,

January 19, 1863.

SIR,

WITH reference to the enclosed tabular statement, which you supplied in compliance with the request of the Committee contained in my letter Minute 3/9, dated January 9, 1863, the Committee request you will be good enough to inform them whether this form contains the details of every nature and description of ordnance and ammunition you propose to submit, and if not, that you will add those you have omitted, heading the form as follows:—

"Tabular statement of all the different descriptions of guns and ammunition proposed by Mr. Whitworth," and that you will authenticate it by your signature.

The Committee also request you will inform them which of these guns are now ready for experiment, and on what day all or any of them can be handed over complete.

As the manufacture of large quantities of ammunition required for experiments must of necessity require considerable time, the Committee beg that you will forward at your earliest convenience the detailed working drawings, specifications, and patterns of every description of ammunition you propose, that no time may be lost in commencing the manufacture at the Royal Laboratory, Woolwich.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq.,  
28, Pall Mall, London. Secretary.

Minute 7/1.

109, Victoria Street, Westminster, S.W.,

January 19, 1863.

SIR,

IN acknowledging the receipt of your letter of the 17th instant, containing a description of the guns and ammunition shown in the enclosed tabular form, and the drawings which accompanied it, the Committee request you will be good enough to inform them whether this form contains the details of every description of ordnance and ammunition you propose to submit, and if not, that you will add those that you have omitted, heading the form as follows:—

"Tabular statement of all the different descriptions of ordnance and ammunition proposed by Sir William Armstrong:"

And that you will authenticate it by your signature.

The Committee also request you will inform them which of these guns are ready for experiment, and on what day all or any of them can be handed over complete.

As the manufacture of large quantities of ammunition required for experiment must of necessity require considerable time, the Committee beg you will forward at your earliest convenience the detailed working drawings, specifications and patterns of every description of ammunition you propose, that no time may be lost in commencing the manufacture at the Royal Laboratory, Woolwich.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,  
January 26, 1863.

SIR, THE Committee are anxious to make themselves acquainted with the different processes in operation at Elswick for the manufacture of your ordnance and ammunition. They therefore propose, if convenient to you, to visit the Elswick Ordnance Works on Wednesday, 4th February, at such hour in the morning as may be most agreeable to you.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Elswick Ordnance Works.

109, Victoria Street, Westminster, S.W.,  
January 26, 1863.

SIR, THE Committee are anxious to make themselves acquainted with the manufacture of your ordnance and ammunition, they are desirous therefore of visiting your works at Manchester on Friday, 6th February, at any hour in the morning that will be most convenient to you.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Manchester.

109, Victoria Street, Westminster, S.W.,  
January 26, 1863.

SIR, THE Committee request you will lose no time in forwarding the drawings, &c. requested in my letter of the 19th instant, more particularly those of the 12-pounder and 70-pounder guns and ammunition you propose, as they have determined on commencing the experiments with these guns and wish to have the carriages ordered as soon as possible; they also request you will be good enough to return the proof sheet of your evidence at your earliest convenience.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
28, Pall Mall, London.

109, Victoria Street, Westminster, S.W.,  
January 27, 1863.

MY LORD, THE Committee having now arrived at a stage of their inquiry at which it seems desirable to carry on some experiments to test the relative values of the ordnance and ammunition proposed by Sir W. Armstrong and Mr. Whitworth, I have the honour to request your sanction to the following orders being sent:—

To Sir W. Armstrong to supply:—

One breech-loading 12-pounder gun complete, 200 segment shell, 200 common shell, 600 solid shot, 200 bursters, 400 time fuzes, 400 concussion fuzes.

One muzzle-loading 12-pounder gun complete, 200 segment shell, 200 common shell, 600 solid shot, 200 bursters, 400 time fuzes, 400 concussion fuzes.

One 70-pounder breech-loading gun complete, 100 segment shell, 200 common shell, 500 solid shot, 100 special shot and 100 special shell for penetrating armour plates, 300 time fuzes, 300 concussion fuzes.

One 70-pounder muzzle-loading gun complete, 100 segment shell, 200 common shell, 500 solid shot, 100 special shot, and 100 special shell for penetrating armour plates, 300 time fuzes, 300 concussion fuzes.

To Mr. Whitworth to supply:—

One muzzle-loading 12-pounder gun complete, 200 shrapnel shell, 200 common shell, 600 solid shot.

One muzzle-loading 70-pounder gun complete, 100 shrapnel shell, 200 common shell, 500 solid shot, 100 special shot and 100 special shell, for penetrating armour plates.

As Mr. Whitworth proposes to use fuzes similar to the service fuze for smooth-bore guns, these can be supplied from the Royal Laboratory, Woolwich.

I have also to request you will direct the Principal Superintendent of Stores, Woolwich, to comply with such requisitions from the Committee for stores, ammunition, &c. as may be necessary to enable them to carry on their experiments.

I have, &c.

(Signed) R. RUMLEY,  
Major-General and President.

The Under Secretary of State,  
War Office, Pall Mall.

109, Victoria Street, Westminster, S.W.,  
February 2, 1863.

SIR, IN compliance with the request contained in your letter No. 3, dated 29th January 1863, the Committee will postpone their visit to your works until the conclusion of the experiments.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Manchester.

109, Victoria Street, Westminster, S.W.,  
February 9, 1863.

SIR, ADVERTING to your Minute M./252 on duplicate demand, R. 1, 2/2/63, there appears to be some mistake in ordering the guns mentioned in your letter M./243. The only demand yet made for guns, &c. is R. 1, 2/2/63, which only specifies guns of two calibres, viz., 12- and 70-pounders, as, however, all the guns specified in your letter, except the three brass Whitworth guns, will probably eventually be required by the Committee for experimental purposes, their being supplied at once will prevent delay when they are required.

With reference to the three brass guns (Whitworth) to be supplied by the Royal Gun Factory, I have communicated with the Director of Ordnance, as it may probably be the intention to carry on experiments with guns made both of brass and homogeneous metal.

I agree with the suggestion made in paragraph 2, Minute M./252, and I will therefore substitute a complete demand for R. 1, 2/2/63.

In answer to paragraph 3, the Committee request that the whole of the Armstrong projectiles, fuzes, and bursters, should be supplied by the Elswick Ordnance Company.

That the whole of the Whitworth projectiles should be made at Manchester.

And that in both cases they should be inspected by the Inspector of Artillery, for which purposes patterns have been demanded, R. 7, R. 10, 9/2/63.

The cartridges for all guns, the Committee request, may be made in the Royal Laboratory specially for the experiments; that the same number of cartridges for the same nature of Armstrong and Whitworth gun be made out of each barrel of powder used, and that each cartridge may be marked with the brand of the powder.

The Committee request that Mr. Whitworth's wish to have his fuzes made in the Royal Laboratory be complied with; the pattern fuze therefore demanded in R. 10, 9/2/63, after having been compared with the one for the Committee, may be handed over to the Superintendent, Royal Laboratory, to govern his supply.

The Committee have not yet determined what proof they propose the guns should undergo. I will therefore communicate further with you in reference to the concluding paragraph of your Minute M./252.

I have, &c.

(Signed) H. DYER, Captain R.A.,  
The Principal Superintendent of Stores, Secretary.  
Royal Arsenal, Woolwich.

109, Victoria Street, Westminster, S.W.,  
February 17, 1863.

SIR, THE Committee beg to inform you that Sir W. Armstrong has submitted a 20-pounder gun, weight 12½ cwt., length without fittings 66½ inch, as a shell gun for field service, to replace the 24-pounder howitzer formerly used in a field battery. They request you will inform them whether you consider it necessary that such a description

of gun should accompany your 12-pounder gun in the field, and if so, they request you will supply them with a drawing and description on a tabular form, similar to that which accompanied my letter Minute 3/9, dated January 9, 1863, of the gun you propose to submit to compete with this 20-pounder.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
J. Whitworth, Esq., Secretary.  
28, Pall Mall, London.

109, Victoria Street, Westminster, S.W.,  
February 24, 1863.

SIR, THE Committee having been informed by the Under Secretary of State for War that two 12-pounder breech-loading Armstrong guns have been ordered in Royal Gun Factory on 7663/14, 17/1/63, and one 12-pounder breech-loading Armstrong gun from Elswick Ordnance Company on 7663/6, 10/1/63, they beg you will inform them whether these are the guns you propose to submit for the experiments in compliance with their demands on the Principal Superintendent of Stores, Woolwich, R. 12, 10/2/63, and R. 20, 16/2/63, or whether they are to be considered as additional. They also request you will inform them whether you have any objection to take three of the 70-pounder breech-loading guns under orders from Elswick Ordnance Company on contract, as the 70-pounders demanded on the requisition quoted above.

I have, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Elswick Ordnance Works,  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,  
February 24, 1863.

SIR, The Committee having been informed by the Under Secretary of State for War that three brass 12-pounder muzzle-loading Whitworth guns have been ordered from the Royal Gun Factory on 80/W./729, 23/12/63, they request you will inform them whether you propose to submit these guns to them for their experiments; they also beg you will inform them whether the three homogeneous metal 12-pounder guns ordered from the Manchester Ordnance Company on 80/W./743, 10/1/63, and 7350/7992, 2/12/62, are those which you propose to submit in compliance with the covering order to my letter R. 18, 16/2/63, or whether these guns are to be considered as additional.

I have, &c.

(Signed) H. DYER, Captain R.A.,  
J. Whitworth, Esq., Manchester. Secretary.

109, Victoria Street, Westminster, S.W.,  
March 6, 1863.

SIR, THE Committee having considered your letter, dated February 26, authorize you to make one muzzle-loading 70-pounder gun of 75 cwt., that being the weight of Mr. Whitworth's gun. It would, however, be more in accordance with the plan of experiments the Committee have adopted if *all three* of the muzzle-loading 70-pounders were so altered, and they would accordingly wish this to be done, provided you do not attach any special importance to a trial of the muzzle-loading light gun of 61 cwt.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,  
March 11, 1863.

SIR, THE Committee beg to acknowledge the receipt of your letter, dated March 9, 1863, and in answer beg to inform you that for the present they will confine their experiments to the 70-pounders of 75 cwt. (muzzle-loaders) to compare with the 75-cwt. muzzle-loading gun proposed by Mr. Whitworth, as they consider it would only complicate the experiments to carry them on with two muzzle-loaders of the same calibre, but of different weights, more particularly as they will be able to obtain sufficient data concerning the light 70-pounder from the breech-loading guns you propose.

They request you will forward a tracing of the 75 cwt. 70-pounder muzzle-loader to enable a carriage to be constructed for it.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,  
March 30, 1863.

SIR, THE Committee request you will inform them when the delivery of your field guns and ammunition will take place. By a letter received to-day from Mr. Whitworth, it appears he proposes to deliver some of his field guns in 10 days.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,  
March 31, 1863.

SIR, ADVERTING to your letter informing the Committee that some of your field guns would be ready for delivery in 10 days, and requesting to know when the carriages would be ready, I have the honour to inform you that the carriages for the field guns will be completed early next week, as far as they can be without the guns. Owing to the unusual position of the elevating screw, it is not considered advisable to fit it to the carriage before the arrival of the guns; this, however, can easily be done in two days.

The Committee beg again to urge the necessity of your forwarding them patterns in duplicate of your cartridges and wads, with specifications to guide the manufacture in the Royal Laboratory, as until these are received the manufacture cannot be commenced. As very large quantities of ammunition will be required, and as very great care will be required in its manufacture to prevent the possibility of any mistakes, the Committee beg there may be as little delay as possible in forwarding the patterns.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
28, Pall Mall, London.

109, Victoria Street, Westminster, S.W.,  
April 2, 1863.

SIR, ADVERTING to the concluding paragraph of your letter of the 1st, I have the honour to inform you that the Committee propose to apply to you for all projectiles to be used at the forthcoming experiments in compliance with a request contained in Mr. Whitworth's letter of the 24th of January. The whole of the cartridges, however, they proposed to have manufactured in the Royal Laboratory to insure uniformity of powder.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
William Hulse, Esq., Secretary.  
Manchester Ordnance Company.

109, Victoria Street, Westminster, S.W.,  
April 13, 1863.

SIR, THE Committee beg to acknowledge the receipt of the cartridges and wads forwarded from the Manchester Ordnance Company to guide the manufacture of these articles in the Royal Laboratory, Woolwich. Although it is departing from their instructions to offer either suggestions or advice on anything that may be submitted to them for trial, they would beg you to reconsider the matter before coming to the determination to have your cartridges and wads made similar to the patterns you have supplied. The Committee are most anxious that the forthcoming experiments should be as complete and exhaustive as possible, and with this view, they wish, if possible, to prevent any errors either in the construction or manufacture of the ammunition which might produce advantageous or disadvantageous results on either side, and thus render the trials nugatory as far as the systems of rifling are concerned.

As the success of a gun depends so much on the ammunition, and as there are so many minor details that should receive consideration before any particular pattern is adopted, I think it would save time and useless correspondence if you would favour me with a personal interview either here or in Manchester. I should then be able to point

out to you the sources from whence you could obtain the information on this subject derived from a long series of experiments, and it would then be optional whether you accepted these results or whether you would prefer to adhere to your original plans. I am, &c.

(Signed) H. DYER, Captain R.A.,  
William Hulse, Esq., Secretary.  
Manchester Ordnance Company.

109, Victoria Street, Westminster, S.W.,  
April 23, 1863.

SIR,  
IN compliance with the desire of Mr. Whitworth the Committee request you will be good enough to prepare patterns of the under-mentioned articles to be submitted for his approval:—

|                                   |   |        |   |
|-----------------------------------|---|--------|---|
| Cartridge and wad for 12-pr. gun. |   |        |   |
| Common shell                      | " | "      | " |
| Shrapnel                          | " | "      | " |
| Cartridge and wad                 | " | 70-pr. | " |
| Common shell                      | " | "      | " |
| Shrapnel                          | " | "      | " |
| Fuze                              | " | "      | " |

I have, &c.

(Signed) H. DYER, Captain R.A.,  
Colonel Boxer, R.A., Secretary.  
Superintendent Royal Laboratory, Woolwich, S.E.

109, Victoria Street, Westminster, S.W.,  
April 24, 1863.

SIR,  
REFERRING to your note of the 28th March 1863, stating that "some of the guns would be ready in eight or 10 days," the Committee request you will be good enough to inform them whether you have yet delivered the guns at Woolwich, as they have not received any notification of their arrival.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Manchester.

109, Victoria Street, Westminster, S.W.,  
June 5, 1863.

MY LORD,  
I HAVE the honour to draw your lordship's attention to the little progress the Committee have been able to make in determining the questions submitted for their consideration in the instructions which accompanied War Office letter 7663/1, dated 1st January 1863, and to request your Lordship's further instructions.

On the 6th January Mr. Whitworth was examined before the Committee and stated, in answer to question 66, that "a 12-pr. gun, then at Manchester, would be finished " in a short time;" and in answer to question 64, that "the ammunition was then ready for experiment."

In a letter dated 17th February 1863, Mr. Whitworth states "the guns will be completed as early as possible and " will probably be as follows, viz.:—

" The 3 12-pr. guns in 3, 4, and 6 weeks.  
" 3 70-pr. " " 3, 6, " 8 "

On the 28th March Mr. Whitworth again writes to say "some of the guns will be ready in eight or 10 days."

On the 24th April the Committee communicated with Mr. Whitworth with reference to his note of the 28th March, requesting to be informed if the guns had yet been delivered; they have received no answer to this letter, nor have they received any notification of the arrival of the guns.

The Armstrong field guns have been proved and are ready for delivery.

I have, &c.

(Signed) R. RUMLEY, Major-General,  
The Under Secretary of State, President.  
War Office, Pall Mall.

109, Victoria Street, Westminster, S.W.,  
June 12, 1863.

SIR,  
I HAVE this day forwarded by passenger train a box containing two 70-pr. cartridges, 12 lbs. each, with Boxer's lubricator attached, and two 12-pr. cartridges, 2 lbs. each, with lubricators. These cartridges, &c. have been made in

the Royal Laboratory and are now submitted for your approval. Should they be in every respect suitable for your guns and such as you would wish to submit for the forthcoming experiments, the Committee request you will seal or otherwise mark each cartridge and lubricator and return them with as little delay as possible, that they may serve as patterns to govern the manufacture of your ammunition in the Royal Laboratory.

The Committee beg again to urge upon you the necessity of hastening the delivery of your guns, as it is of the utmost importance that the experiments should be proceeded with as soon as possible.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company.

109, Victoria Street, Westminster, S.W.,  
June 22, 1863.

SIR,  
IN reply to your letter of the 17th, the Committee beg to inform you that the 100 12-pr. cartridges you require for experiment shall be provided from the Royal Laboratory with as little delay as possible. With reference to the latter part of your letter, in which you state that the machinery necessary for the "manufacture of the larger " guns will be ready in six weeks," the Committee beg you will not delay the delivery of the 12-pr. guns until the completion of the 70-prs., as the experiments with the field guns will necessarily occupy some considerable time, and they are anxious to proceed with these experiments with as little delay as possible.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
J. Whitworth, Esq., Secretary.  
Manchester.

109, Victoria Street, Westminster, S.W.,  
November 13, 1863.

SIR,  
THE Principal Superintendent of Stores, Woolwich, has informed me that he has this day received an invoice for 600 solid shot from the Manchester Ordnance Company, but that no mention is made either of the common or shrapnel shell. I must remind you that the preliminary experiments mentioned in your letter of the 4th inst. must be delayed until the arrival of both the common and shrapnel shell, as without them the limbers for your guns cannot be completed, and until they are none of the guns can be sent to Shoeburyness for the experiments you desire.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
J. Whitworth, Esq., Manchester. Secretary.

109, Victoria Street, Westminster S.W.,  
November 17, 1863.

MY LORD,  
I AM directed by the Armstrong and Whitworth, Committee to request you will give them information on the following points, to guide them in considering the value of some proposals submitted by Sir W. Armstrong.

1st. What is the greatest weight and length admissible, and what the most convenient for a cupola gun, a pivot gun, and a broadside gun?

I have, &c.

(Signed) H. DYER, Captain R.A.,  
Secretary.

The Secretary, Admiralty.

109, Victoria Street, Westminster, S.W.,  
November 24, 1863.

SIR,  
IN reply to your letter of the 21st, informing me that 200 shrapnel shells had been forwarded for Colonel Boxer's preliminary experiments, and that Mr. Whitworth proposed to supply 200 shot and 200 long common shell, and 200 additional shrapnel for the Committee's experiments, and requesting a covering order for them, I have the honour to inform you that the Committee have no power to authorize any ammunition other than that already demanded for their experiments. In compliance with a wish expressed by Mr. Whitworth, the Committee proposed to make a supplementary demand for the few rounds necessary to determine the length of fuze and ele-

vation for the shrapnel shell, but they do not consider that 200 will be required for the purpose. The Committee again beg to urge the delivery of the ammunition for the field guns without delay, as until the whole of it has been delivered they are determined not to commence any experiments.

I have, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

W. Hulse, Esq., Manchester Ordnance Company.

Royal Arsenal, Woolwich, S.E.,  
November 27, 1863.

SIR, I AM directed to request you will forward one 12-pounder Whitworth gun and carriage, side arms, &c., to Shoeburyness for the use of Colonel Boxer, R.A., together with such Whitworth ammunition as he may consider necessary for his experiments.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

The Principal Superintendent of Stores, Woolwich.

Royal Arsenal, Woolwich, S.E.,  
November 27, 1863.

SIR, I AM directed by the Committee to inform you that a Whitworth 12-pounder and carriage has been sent to Shoeburyness to enable you to carry on the necessary experiments to ascertain the elevation and length of fuze necessary for the shrapnel shell you have designed for Mr. Whitworth's gun. Colonel Taylor has been communicated with, and will afford the necessary assistance.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

Colonel Boxer, R.A., Superintendent  
Royal Laboratory.

109, Victoria Street, Westminster, S.W.,  
December 3, 1863.

SIR, THE Committee having determined to carry on experiments with the 70-pounders at the same time as with the field guns, request you will be good enough to deliver your 70-pounder guns and ammunition as soon as possible.

Should no unforeseen delays occur, the experiments are fixed for the middle of January.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

Sir W. Armstrong, C.B.,  
Elswick Ordnance Company.

109, Victoria Street, Westminster, S.W.,  
December 3, 1863.

SIR, THE Committee would feel much obliged if you would inform them when you think the preliminary experiments to determine the length of fuze, &c., for the shrapnel shell you have designed for Mr. Whitworth's gun will be completed, and what number of rounds will be sufficient for the purpose.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

Colonel Boxer, R.A., Superintendent  
Royal Laboratory.

109, Victoria Street, Westminster, S.W.,  
December 3, 1863.

SIR, IN reply to your letter dated October 27, proposing a 6½-ton gun for a broadside gun and one of 12 tons for cupolas, I am directed by the Committee to inform you that they consider the 12-pounders and 70-pounders they have ordered are sufficient to show the relative values of the systems proposed by Mr. Whitworth and yourself, in field and heavy ordnance, they must therefore for the present decline to order any other guns, as they hope to obtain all

the necessary information of both systems without incurring any further expense.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

Sir W. Armstrong, C.B., Elswick  
Ordnance Company.

109, Victoria Street, Westminster, S.W.,  
December 3, 1863.

MY LORD, I AM directed by the Committee to request authority to order 500 solid shot and 200 segment shell for each nature of field gun in addition to the number already sanctioned, and as so much delay has already been caused owing to the first order having only just been complied with, the Committee request your Lordship's sanction to any future order being made the subject of a contract with such penalties as you may consider necessary to ensure the delivery within the specified time.

I have, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

The Right Honourable the Secretary  
of State for War, War Office.

109, Victoria Street, Westminster, S.W.  
December 16, 1863.

SIR, As the 70-pounder gun and ammunition, which you informed the Committee at your interview on the 2nd inst., had left your works for delivery at Woolwich has not yet been received there, the Committee think it desirable you should make some inquiries on the subject, as they are anxious to have everything ready for the experiments at the middle of January.

I am, &c.  
(Signed) H. DYER, Captain, R.A.,  
Joseph Whitworth, Esq., Manchester  
Ordnance Company, Manchester. Secretary.

109, Victoria Street, Westminster, S.W.,  
December 23, 1863.

SIR, I AM directed by the Committee to request you will forward your 70-pounder muzzle and breech-loading guns with their ammunition to Woolwich with as little delay as possible, as it is definitely settled that the experiments will be carried on simultaneously with the 12- and 70-pounders, and commence as soon after the middle of January as possible.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Elswick  
Ordnance Company. Secretary.

109, Victoria Street Westminster, S.W.,  
January 7, 1864.

SIR, I AM directed to inform you that the experiments with the Armstrong and Whitworth field guns will commence on Thursday, the 14th January next, at 9 a.m., at the practice range, Shoeburyness.

The experiments with the 70-pounder guns, which were to take place at the same time, are postponed until further notice.

I am, &c.  
(Signed) H. DYER, Captain, R.A.,  
Sir W. G. Armstrong, C.B., Elswick  
Ordnance Works, Newcastle-on-Tyne. Secretary.

109, Victoria Street, Westminster, S.W.,  
January 7, 1864.

SIR, I AM directed to inform you that the experiments with the Armstrong and Whitworth field guns will take place at the practice range, Shoeburyness, on Thursday the 14th inst., at 9 a.m.

The experiments with the 70-pounders, which were to have been carried on at the same time, are postponed, pending the delivery of your 70-pounder guns and ammunition.

I am, &c.  
(Signed) H. DYER, Captain, R.A.,  
Joseph Whitworth, Esq., Manchester  
Ordnance Company, Manchester. Secretary.

109, Victoria Street, Westminster, S.W.,  
January 7, 1864.

SIR, I AM directed to inform you that the experiments with the Armstrong and Whitworth field guns will commence at 9 a.m. on Thursday the 14th January, at the practice range, Shoburness, as determined at a meeting of the Committee on December 2nd, 1863. The experiments with the 70-pounders are unavoidably postponed until the delivery of Mr. Whitworth's guns and ammunition.

I enclose a copy of the report on the Southport range.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
W. Pole, Esq., 3, Storey's Gate, Secretary.  
Westminster.

Also to—

J. Penn, Esq.  
Colonel Simmons, R.E.  
Colonel Taylor, R.A.  
Colonel Ormsby, R.A.

109, Victoria Street, Westminster, S.W.,  
January 8, 1864.

SIR, THE Committee having determined to postpone the experiments fixed for the 14th inst., as they think it possible that that day might be inconvenient to you, request you will be good enough to name some time between two early dates when it will be convenient for you to commence the experiments, that they may fix the day that will best suit yourself and Mr. Whitworth.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

Also to—

J. Whitworth, Esq.

109, Victoria Street, Westminster, S.W.,  
January 19, 1864.

SIR, I AM directed to request you will favour the Committee with a reply to their letter of the 8th inst. requesting you to name a time between two early dates at which you you will be ready to commence the experiments at Shoburness.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Manchester Secretary.  
Ordnance Company, Manchester.

109, Victoria Street, Westminster, S.W.,  
January 25, 1864.

SIR, THE delays which have occurred in the delivery of your guns and ammunition having caused the experiments to be so repeatedly deferred the Committee are most desirous of fixing a date on which the experiments may with certainty be commenced; for this purpose it is essential that you should inform them when the whole of your guns and ammunition (both 12- and 70-pounders) will be delivered at Woolwich, as the Committee have decided not to commence any of the experiments until the whole of the guns and ammunition have been received at Woolwich, so as to ensure that no change will be made during the experiments when partial results have been obtained.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

109, Victoria Street, Westminster, S.W.,  
January 25, 1864.

SIR, THE Committee being desirous of visiting your works at Manchester request you will be good enough to name a day for the purpose, if it is agreeable to you that they should do so.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

109, Victoria Street, Westminster, S.W.,  
February 6, 1864.

SIR, IN reply to your letter 7663, 108, dated January 30, 1864, I have the honour to inform you that the Committee commenced their proceedings on the 5th January, 1863, and in compliance with their instructions proceeded to examine both Mr. Whitworth and Sir W. Armstrong to ascertain what description of ordnance and ammunition they were prepared to submit, and at the conclusion of the examination requested these gentlemen to submit a tabular form embodying their views regarding guns and ammunition. These tabular forms will be found pages 129, 130, 131 in the Appendix to the Blue Book, copies of which have been forwarded to the War Office.

From the Ordnance enumerated in these tables the Committee selected the 12- and 70-pounders as types of the field and garrison or naval gun being guided in their selection by the fact of these guns most nearly corresponding in weight and calibre in the two systems, and, therefore, the most suitable for instituting a comparison as to the relative value of the systems proposed by Sir W. Armstrong and Mr. Whitworth, and also because Mr. Whitworth stated in his evidence, in answer to question 66, that he had a 12-pounder gun, which would be finished in a short time; and in answer to question 61, that the ammunition was ready to commence the experiments.

On the 27th January 1863 the Committee requested the Secretary of State for War to authorize them to order the following guns and ammunition—

From Sir W. Armstrong.

1 12-pounder M.L. gun.  
1 12-pounder B.L. gun.  
1 70-pounder M.L. gun.  
1 70-pounder B.L. gun.

With 1,000 rounds of ammunition per gun.

From Mr. Whitworth.

1 12-pounder M.L. gun.  
1 70-pounder M.L. gun.

and 1,000 rounds of ammunition per gun. Mr. Whitworth declined to supply breech-loading guns.

Having received authority 7663/30, 4/2/63, a detailed demand dated 10/2/63 was made on the Principal Superintendent stores, Woolwich, for the supply of these stores.

As the instructions directed the Committee to inquire into the manufacture of the guns and ammunition, they signified their wish to Sir W. Armstrong and Mr. Whitworth, by letter dated 26/1/63, to visit their works, that they might make themselves acquainted with the various processes of manufacture pursued. On the 29/1/63 Sir W. Armstrong informed the Committee that he would be happy to receive them at the Elswick Ordnance Company's works, and explains the manufacture of his guns, &c.; by a letter of the same date Mr. Whitworth states that he will be happy to receive the Committee, but would prefer doing so after the experiments. The Committee, therefore, visited Elswick on the 4th February, and subsequently the Royal Gun Factory and Royal Laboratory at Woolwich, but were obliged to postpone their visit to Manchester.

The Committee continued to take all the evidence they could obtain bearing on their inquiry, and concluded this portion of their labours on the 26th February, 1863; the whole of the evidence thus obtained will be found in the Blue Book.

As the Committee considered that delays might arise if only one gun of each nature were ordered, should any accident happen during the experiments, thought it desirable to order three guns of each nature.

Authority having been obtained the orders were given to Sir W. Armstrong and Mr. Whitworth, coupled with a request that they would state when they would be delivered. Mr. Whitworth, in a letter dated February 17th, 1863, states the probable time of delivery to be as follows:—

3 12-pounder guns in 3, 4, and 6 weeks.  
3 70-pounder guns in 3, 6, and 8 weeks

Sir W. Armstrong replied that he would deliver them as soon as possible.

On the 30th March 1863 a further communication was made to Sir W. Armstrong and Mr. Whitworth to ascertain the probable time of the delivery of the guns.

Sir W. Armstrong replied by letter dated April 4th, 1863, that his guns would be ready by the end of April.

Mr. Whitworth replied by letter dated 31st March 1863, that some of his guns would be ready in 10 days; as the

guns were not delivered the Committee drew Mr. Whitworth's attention to the fact by letter dated April 24th, 1863; no reply was received to this.

The Committee reported on the 5th June 1863 to the Secretary of State for War, and on the 12th June again urged Mr. Whitworth to deliver his guns; in reply, dated June 17th, he states that he cannot get the metal he considers requisite for his heavy guns until the manufacturers erect suitable machinery for the purpose; this he expects will be ready in six weeks. The Committee, therefore, by letter dated June 22nd, 1863, urged him not to delay the delivery of his 12-pounder guns, as they are anxious to commence the experiments.

On the 4th September Mr. Whitworth informed the Committee that his rifled guns would be ready in three or four weeks.

The Armstrong guns were proved on the following dates, but were retained at Newcastle in compliance with a request to that effect made by Sir W. Armstrong, as the Committee could not decide on the time for commencing the experiments until the delivery of Mr. Whitworth's guns:—

|                        |   |         |
|------------------------|---|---------|
| No. 49 70-pounder B.L. | { | 11/3/63 |
|                        |   | 30/3/63 |
| " 55 " "               |   | 5/6/63  |
| " 56 " "               |   | 17/6/63 |
| " 58 " M.L.            |   | 28/5/63 |
| " 59 " "               |   | 29/5/63 |
| " 60 " "               | { | 19/6/63 |
|                        |   | 9/7/63  |
| " 38 12-pounder B.L.   |   | 12/3/63 |
| " 53 " "               |   | 6/5/63  |
| " 61 " "               |   | 19/5/63 |
| " 51 " M.L.            |   | 30/4/63 |
| " 52 " "               |   | 6/5/63  |
| " 57 " "               |   | 9/5/63  |

The Whitworth 12-pounder guns were delivered as follows:—

|                         |          |
|-------------------------|----------|
| No. 246 12-pounder M.L. | 15/10/63 |
| " 251 " "               | 29/10/63 |
| " 253 " "               | 29/10/63 |

Their proof, however, was delayed until 4/11/63, owing to the proof shot not having been delivered with the guns.

On the 2nd December 1863 the Committee met to fix the date for the experiments; Mr. Whitworth attended this meeting, and urged that to save time it would be desirable to carry on the experiments with the 12- and 70-pounders at the same time; the Committee agreed to this, and fixed the middle of January 1864 for the experiments. Mr. Whitworth concurring in this arrangement, Sir W. Armstrong was therefore requested to deliver all his guns and ammunition, and completed the deliveries 11/1/64.

Mr. Whitworth delivered his ammunition as follows:—

|                             |         |
|-----------------------------|---------|
| 12-pounder—200 common shell | 1/12/63 |
| " 600 solid shot            | 6/11/63 |

and forwarded 200 shrapnel shell to be filled in the Royal Laboratory; these latter have, however, not yet been handed over to the Committee, as it appears Mr. Whitworth wishes to make some alteration in their exterior dimensions.

None of the 70-pounder guns or ammunition have yet been received.

As the Committee were anxious to suit the convenience of Sir W. Armstrong and Mr. Whitworth, they communicated with them on January 11, 1864, requesting them to name their own day for the experiments.

Sir W. Armstrong replied that he would be happy to attend any day the Committee might appoint. Mr. Whitworth, by letter dated January 20, states he will be ready any day between the 1st and 15th February.

On the 25th January 1864 the Committee met to make all final arrangements previous to commencing the experiments, and then received a letter from Sir W. Armstrong protesting against the experiments being proceeded with until Mr. Whitworth had delivered all his guns and ammunition, as he considered it was unfair that Mr. Whitworth should have all the advantage of the progressive improvement in the manufacture of metals while he was prevented by having complied with the request of the Committee and delivered all his guns and ammunition. The Committee so entirely concurred in the justice of this protest that they have postponed the experiments until Mr. Whitworth delivers his guns and ammunition.

On the 4th February 1864 the Committee visited Mr. Whitworth's works, and received an assurance from him in person and by letter dated February 5, 1864, that he will

deliver the whole of his 12 and 70-pounder guns, solid shot and common shell by the 14th March next.

From the foregoing detail of the proceedings of the Committee, it is evident that the cause of the delay that has occurred is due to the non-delivery of the Whitworth guns and ammunition.

I have, &c.

(Signed) R. RUMLEY, Major-General,

The Under Secretary of State, President.  
War Office.

109, Victoria Street, Westminster, S.W.,

Sir, March 1, 1864.

I AM directed by the Committee to forward you a copy of a letter received from the War Office in reference to the competitive trials of the Armstrong and Whitworth guns, and at the same time to beg that your deliveries on the 14th March next may be complete in every respect and on no account be delayed beyond that date, or it will be impossible to insure the guns and ammunition reaching Shoeburyness before the 1st April.

I am, &c.

(Signed) H. DYER, Captain R.A.,

J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

Royal Arsenal, Woolwich, S.E.,

Sir, March 11, 1864.

To insure your ammunition being delivered in conformity with your wishes I am directed to request you will be good enough to supply me with the following information respecting the cartridges you propose using:—

For 12-pounder gun.

Length  
Diameter  
Charge.

Description of dimensions of lubricator.

Do you propose to vary your cartridge for the different natures of projectiles?

For 70-pounder gun.

Length  
Diameter  
Charge.

Description and dimensions of lubricator.

Do you propose to vary your cartridge for the different natures of projectiles; if so, would you be good enough to give the same information respecting each description of cartridge you propose to employ.

I have, &c.

(Signed) H. DYER, Captain R.A.,

Joseph Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

Royal Arsenal, Woolwich, S.E.,

March 28, 1864.

PRINCIPAL SUPERINTENDENT OF STORES,

THE Committee having consented to Sir W. Armstrong and Mr. Whitworth making any changes they may think proper in the ammunition, &c. delivered for the competitive trials, request you will receive any stores supplied for the purpose until the 1st April next, after which date no further change can be permitted.

I am, &c.

(Signed) H. DYER, Captain R.A.,  
Secretary.

Royal Arsenal, Woolwich, S.E.,

Sir, March 29, 1864.

As it is absolutely necessary that the field guns with their ammunition should leave for Shoeburyness to-morrow afternoon, I have the honour to request you will be good enough to hand over to the Principal Superintendent of Stores the following ammunition and stores for the Whitworth 12-pounder guns:—

|                           |   |   |   |     |
|---------------------------|---|---|---|-----|
| Segment shell             | - | - | - | 100 |
| Common "                  | - | - | - | 100 |
| Fuzes "                   | - | - | - | 200 |
| Cartridges                | - | - | - | 200 |
| Fuze implements, sets     | - | - | - | 3   |
| Bursting for common shell | - | - | - | 100 |

I am, &c.

(Signed) H. DYER, Captain R.A.,

Colonel Boxer, R.A., Secretary.  
Superintendent Royal Laboratory.

109, Victoria Street, Westminster, S.W.,  
March 31, 1864.

SIR, IN reply to your letter of the 30th March 1864, the Committee request you will be good enough to fit up a fuze box for the approval of Mr. Whitworth; they request you will demand any stores necessary for this purpose from the Principal Superintendent of Stores, Woolwich.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

The Superintendent Royal Laboratory.

109, Victoria Street, Westminster, S.W.,  
March 31, 1864.

SIR, OWING to the changes that have taken place in the fuzes supplied for the forthcoming experiments, the patterns are now obsolete; the Committee therefore propose to return such patterns, and have determined to request both Mr. Whitworth and yourself to select one article of each nature, from the ammunition now supplied, which will be sealed to govern future supplies; these will be inspected and passed by the Inspector of Ordnance in strict accordance with the limits of error allowed in similar stores for the service.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Sir W. Armstrong, C.B., Secretary.  
9, Hyde Park Street, London, S.W.

109, Victoria Street, Westminster, S.W.,  
March 31, 1864.

SIR, OWING to the changes that have taken place in the ammunition supplied for the experiments, the patterns formerly supplied are useless, the Committee therefore propose to return them to you, and to request you will select one article of each nature from the ammunition now supplied to serve as a pattern to govern future supplies, which will in future be inspected and passed by the Inspector of Ordnance in strict accordance with the limits of error allowed in similar stores for the service.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Manchester.

Royal Arsenal, Woolwich, S.E.,  
April 2, 1864.

SIR, IN reply to your letter 1/4/64, I am directed to inform you that the Committee concur with you in the desirableness of having the assistance of the man who packed the ammunition, and also request you will be good enough to detail some one competent to instruct two or three non-commissioned officers and men in the management of the shrapnel shell and fuzes you have proposed for Mr. Whitworth's guns.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Secretary.

The Superintendent Royal Laboratory.

109, Victoria Street, Westminster, S.W.,  
April 8, 1864.

SIR, IN reply to your letter of the 7th inst., the Committee beg to inform you that they regard the three guns on the same terms as if supplied by three different persons, and that they propose to record results accordingly. The fact therefore of Sir W. Armstrong having two guns is immaterial.

I am, &c.  
(Signed) H. DYER, Captain R.A.,  
Joseph Whitworth, Esq., Secretary.  
Shoeburyness.

SIR, Shoeburyness, April 26, 1864.

IN making the parallelograms of error for the different ranges the Committee propose that each competitor shall be allowed to strike out any two shots from the 20 rounds of solid shot at each range, and one shot from each range of common and segment shell.

They further agree that each competitor shall have the option of signing the range tables. I have the honour to request you will favour the Committee with any remarks you may wish to make on the above proposals.

I am, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
Joseph Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, April 26, 1864.

IN making the parallelograms of error for the different ranges the Committee propose that each com-

petitor shall be allowed to strike out any two shots from the 20 rounds of solid shot at each range, and one shot from each range of common and segment shell.

They further agree that each competitor shall have the option of signing the range tables.

I have the honour to request you will favour the Committee with any remarks you may wish to make on the above proposals.

I am, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.

109, Victoria Street, Westminster, S.W.,  
May 2, 1864.

SIR, IN reference to your proposal to cancel that portion of the programme for Thursday next relating to common case, I am directed to inform you that the Committee have decided on not making any alteration in the programme. Should you object to this course your protest will be recorded on the Committee minutes, and the experiments will be carried on with segment and shrapnel shell as common case.

The experiments will commence at 11 a.m.

I have, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
Joseph Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, May 6, 1864.

I AM directed by the President of the Committee to acknowledge the receipt of your letter 17/26/2, 29/4/64, and to inform you that it has been submitted for the consideration of the Committee.

I have, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
Colonel Boxer, R.A., Secretary.  
Superintendent Royal Laboratory.

SIR, Shoeburyness, May 19, 1864.

I AM directed to inform you that the Committee are prepared to grant, on application, any number of rounds you may consider requisite for the purpose of showing any merits your system may possess. They do not wish to restrict you to any particular charge or projectile, but they request you will forward them at your earliest convenience a programme showing in what manner you propose to expend this ammunition, and the number of rounds you will require.

The results will be recorded.

I am, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.

SIR, Shoeburyness, May 19, 1864.

I HAVE the honour to inform you that the Committee are prepared to grant any number of rounds you may consider requisite for the purpose of showing any merits your system may possess. They do not wish to restrict you to any particular charge or projectile, but they request you will forward them at your earliest convenience a programme showing in what manner you propose to expend this ammunition, and the number of rounds you will require.

The results of this firing will be recorded.

I am, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Shoeburyness.

SIR, Shoeburyness, June 6, 1864.

I HAVE the honour to forward herewith a copy of the rectangles of the practice with the 12-pounder competitive guns, together with the formula used in computing them. As however some errors may have occurred the Committee request you will satisfy yourself of their correctness. Should they not hear to the contrary on or before the 17th June next they will assume that you are satisfied, and hand them over to the printer for publication.

These rectangles are to be considered confidential.

I am, &c.  
(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.

SIR, Shoeburyness, June 6, 1864.

I HAVE the honour to forward herewith a copy of the rectangles of the practice with the 12-pounder competitive guns, together with the formula used in computing them. As however some errors may have occurred, the Committee request you will satisfy yourself of the correctness of these documents.

Should they not hear to the contrary on or before Friday, June 17, they will assume that you are satisfied, and hand them over to the printers for publication.

These rectangles are to be considered confidential.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Shoeburyness.

SIR, Shoeburyness, June 6, 1864.

IN reply to your letter of the 6th instant I am directed by the Committee to inform you that as soon as they had observed the defect you complain of in the 12-pounder muzzle-loading cartridges they at once communicated with the Superintendent of the Royal Laboratory, who stated in reply that "the cartridges to which you refer were manufactured in strict accordance with the dimensions laid down, and the difficulty now experienced in loading must be due to the cartridges having become enlarged in packing or in travelling to Shoeburyness."

The Committee beg to draw your attention to the fact that as far back as March 1863 they requested you would supply patterns and specifications to guide the manufacture of your ammunition in the Royal Laboratory, and that any misunderstanding that may have arisen respecting the dimensions of the cartridges now being supplied is due solely to the request of the Committee not having been complied with.

The Committee are most anxious to meet your views in every possible way as regards the supply of the ammunition, which must necessarily be made in the Royal Laboratory, but not only are the difficulties of manufacture greatly increased, but the Committee are unable to check any errors of manufacture owing to their being unprovided with either patterns or specifications to guide them in inspecting this ammunition.

In reply to the concluding paragraph of your letter the Committee will make a note of all abnormal circumstances which have caused delay in the various trials for rapid firing.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

SIR, Shoeburyness, June 6, 1864.

ADVERTING to a demand made on the Principal Superintendent of Stores at Woolwich, dated April 19, 1864, for detailed working drawings and specifications of your guns and ammunition supplied for the competitive trials, I am directed by the Committee to request you will supply these drawings and specifications with as little delay as possible, as the Committee propose at an early date to enter into the question of cost and manufacture.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

SIR, Shoeburyness, June 6, 1864.

ADVERTING to a demand made on the Principal Superintendent of Stores, Woolwich, dated April 19, 1864, for detailed working drawings and specifications of your guns and ammunition supplied for the competitive trials, I am directed by the Committee to request you will supply these drawings and specifications with as little delay as possible, as the Committee propose at an early date to enter into the questions of cost and manufacture.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Joseph Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, June 2, 1864.

I AM directed by the Committee to acknowledge the receipt of your letter of this day's date, by which they are informed that the three 70-pounder breech-loading guns supplied by you to the Committee for experiment, and which the Committee imagined were identical in every respect, are in fact three different guns, the construction of each of which varies from that of the others.

The object of the Committee being to test the principle upon which your guns are constructed, I am to request you to inform them which of the three guns described in your letter is that with which you desire the Committee to experiment to test your principle of construction against that on which Mr. Whitworth's guns are constructed.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Shoeburyness.

SIR, Shoeburyness, June 9, 1864.

THE Committee beg you will be good enough to deliver to the Principal Superintendent of Stores, with as little delay as possible, as much as possible of the ammunition now under orders, as the experiments are being delayed.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

SIR, Shoeburyness, June 9, 1864.

THE Committee beg you will be good enough to forward to the Principal Superintendent of Stores, Woolwich, with as little delay as possible, as much of the Armstrong and Whitworth Committee ammunition now under orders as possible, as the experiments are being delayed.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, June 10, 1864.

As a difference of opinion between the competitors regarding the amount of elevation given to their guns by the quadrant has arisen, the Committee have requested the man sent from the Royal Gun Factory to sight the 70-pounder guns to remain at Shoeburyness to adjust the quadrants and direct me to obtain your sanction to retain the Whitworth sighting gauges and straight edge at Shoeburyness until the conclusion of the experiments connected with range and accuracy.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Colonel Campbell, R.A., Secretary.  
Superintendent Royal Gun Factory.

Shoeburyness, June 13, 1864.

PRINCIPAL SUPERINTENDENT OF STORES,

By a telegram received from Sir W. Armstrong and Co., it appears that the firm have received no official order for the supply of 200 segment shell and percussion fuzes for breech-loading and muzzle-loading 12-pounder Armstrong guns. The demand was made on you, dated May 20, 1864; would you be good enough to send the official order.

To prevent delay in carrying on the experiments the Committee have directed Sir W. Armstrong and Co. to deliver 50 segment shell for each gun at Shoeburyness, and the remainder to you with as little delay as possible.

Would you forward to Shoeburyness as opportunities offer, all the projectiles delivered for the Committee. I will inform you as soon as the magazine accommodation will admit of receiving any more cartridges.

(Signed) H. DYER, Captain R.A., and Major,  
Secretary.

The Principal Superintendent of Stores,  
Royal Arsenal, Woolwich.

SIR, Shoeburyness, June 22, 1864.

I AM directed to inform you that the Committee desire to receive any observations you may wish to make on the records of the practice within three working days after the day on which the practice took place.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Shoeburyness.

SIR, Shoeburyness, June 22, 1864.

I AM directed to inform you that the Committee desire to receive any observations you may wish to make on the records of the practice within three working days after the day on which the practice took place.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Shoeburyness.

SIR, Shoeburyness, June 24, 1864.

THE Committee will be happy to receive any suggestions you may consider desirable with respect to the best method of arriving at the actual strength and endurance of the competitive 12-pounder guns.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Shoeburyness,  
And J. Whitworth, Esq.

MY LORD, Shoeburyness, June 28, 1864.

I HAVE the honour to inform you that the Armstrong and Whitworth Committee have been obliged to discontinue the experiments with the 12-pounder competitive guns until their demands for a further supply of ammunition have been complied with.

I have, &c.

(Signed) R. RUMLEY, Major-General,  
President.

The Right Hon. Earl de Grey and Ripon,  
Secretary of State for War,  
War Office.

SIR, Shoeburyness, July 1, 1864.

IN reply to your letter of the 20th of June, I am desired by the Committee to inform you that their instructions are to examine and report upon different descriptions of guns and ammunition proposed and brought forward by Sir W. Armstrong and Mr. Whitworth; although they are perfectly aware that you are preparing the shells and fuzes for the Whitworth guns, they are not authorized to consider you as a competitor in the experiments they are making. The Committee communicated their programmes daily to the two competitors, and suggest that you should take measures to obtain your information from Mr. Whitworth.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Colonel Boxer, R. A., Secretary.  
Superintendent Royal Laboratory,  
Woolwich.

SIR, Shoeburyness, July 1, 1864.

MR. WHITWORTH having applied to the Committee to be allowed to fire eight steel shell as part of the 200 rounds sanctioned by the Committee for the 70-pounder additional experiments, I am directed to request you will inform me whether you wish also to fire additional steel shell from your 70-pounder gun, as it is necessary to obtain authority to order these special projectiles.

I am, &c.

(Signed) H. DYER, Captain, R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Shoeburyness.

SIR, Shoeburyness, July 1, 1864.

I AM directed by the Committee to inform you that they will apply to the Secretary of State for War for authority to order eight steel shells as requested in your letter dated June 30, 1864.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Shoeburyness. Secretary.

SIR, Shoeburyness, July 6, 1864.

THE Committee request that in future you will be good enough to communicate with them preparatory to making any change in the pattern of stores supplied by the Royal Laboratory for their use, as they cannot receive any stores not previously submitted for their approval.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Shoeburyness. Secretary.

109, Victoria Street, Westminster, S.W.,  
July 25, 1864.

THE Committee request you will be good enough to inform them on what date you will complete the whole of the orders you now have for ammunition for their experiments, including the common case for both 12- and 70-pounders.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,  
July 25, 1864.

THE Committee request you will be good enough to inform them on what date you will complete the whole of the orders you now have for ammunition for their experiments, including the common case for both 12- and 70-pounders.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, August 2, 1864.

THE Committee begs to acknowledge the receipt of your letter N° 7663/194, 27th July, informing them that the Secretary of State for War approves of their being adjourned until the receipt of the whole of the ammunition now ordered, and to acquaint you that no time has hitherto been lost by the Committee in carrying on the experiments, and the sole cause of their application for an adjournment was to ensure the delivery of the ammunition demanded on May 20 and June 7 last. As soon as these demands shall have been complied with, they will be prepared to proceed with the trials for endurance, &c.

I have, &c.

(Signed) R. RUMLEY, Major-General,  
The Director of Ordnance, President.  
War Office.

MY LORD, Woolwich, August 22, 1864.

I have the honour to report that, in compliance with your Lordship's directions, the Committee was adjourned until the whole of the ammunition should have been received. They re-assembled to-day to make arrangements for resuming their experiments, trusting that both Sir W. Armstrong and Mr. Whitworth would complete the deliveries as they had promised by the 23rd instant. I regret, however to inform your Lordship that as the ammunition as

SIR, Shoeburyness, September 15, 1864.

I AM directed by the Committee to call your attention to the practice made with your 70-pr. gun on Tuesday last the 13th instant, by which it appears that the shell had far less range and the gun less recoil when fired from the rear vent than when fired from the top vent, thus indicating that a less strain is brought on the gun by like charges when fired from the rear vent. As the experiments, therefore, are very unequal as regards endurance, the Committee desire me to request that you will at once select from which of the vents all the future experiments with your 70-pr. gun are to be conducted, as they have decided that only one of the vents can be made use of.

I have also to inform you that the Committee have further decided that no practice is to be carried on with the 70-prs. until your decision on this question has been communicated to them.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, September 19, 1864.

IN reply to your letter of the 17th instant, the Committee direct me to inform you that they have made arrangements to fire 20 rounds shot at 5° and 20 rounds at 8° on Thursday morning at 9, at Shoeburyness, to enable you to determine which vent you will adhere to for the remainder of the experiments. Immediately you decide on the vent to be used hereafter, the Committee will be prepared to fire the steel shell.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester.

SIR, Shoeburyness, September 19, 1864.

IN reply to your letter dated September 17, 1864, informing the Committee that some of your 70-pounder common shell were not yet delivered, and proposing to supply a different description, I am directed by the Committee to inform you that they must be in possession of a pattern of the shell you propose before they can take the question into consideration.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester.

SIR, Shoeburyness, September 22, 1864.

THE Committee have learnt with surprise that an alteration has been made in the shrapnel shell for the 70-pounder gun. As this change has been made without any intimation having been given to them they request you will be good enough to afford them some explanation.

I am, &c.

(Signed) H. DYER, Capt. R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

SIR, Shoeburyness, October 10, 1864.

IN reply to your letter dated September 28, 1864, requesting to be allowed to supply a second description of common shell for your 70-pounder guns, I am directed by the Committee to inform you that the Secretary of State for War having deemed it expedient by letter dated 19/9/64, to fix October 1, 1864, as the latest date up to which ammunition intended for the competitive experiments might be received, and having decided that the experiments should be brought to a close with the ammunition then at the disposal of the Committee, they regret that it is not in their power to deviate from these instructions.

I am, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. G. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,

September 27, 1864.

SIR,

It having been brought to the notice of the Committee that the competitive guns have been repaired without their knowledge, I am directed to inform you that in future no repair will be permitted until its nature be clearly stated in a written memorandum to the Committee, which, when approved, will be forwarded to the Brigade-Major at Shoeburyness to give the necessary orders.

I have, &c.

(Signed) H. DYER, Capt. R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

109, Victoria Street, Westminster, S.W.,

September 27, 1864.

SIR,

It having been brought to the notice of the Committee that the competitive guns have been repaired without their knowledge, I am directed to inform you that in future no repair will be permitted until its nature be clearly stated in a written memorandum to the Committee, which, when approved, will be forwarded to the Brigade Major at Shoeburyness to give the necessary orders.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
J. Whitworth, Esq., Manchester. Secretary.

SIR, Shoeburyness, September 22, 1864.

WITH reference to the request contained in your letter of the 26th, to replace your supply of 70-pounder common shell, I am directed by the Committee to inform you that they approve of your doing so on the distinct understanding that no expense whatever is entailed on the Government by the change.

I am, &c.

(Signed) H. DYER, Captain R. A., and Major,  
J. Whitworth, Esq., Manchester. Secretary.

SIR,

Bexhill, October 17, 1864.

IN reply to your letter relative to testing the destructive effect of 70-pounder common shell, I am directed to inform you that you are mistaken in supposing that two different descriptions of common shell are to be used with Mr. Whitworth's 70-pounder gun. The same common shell that is fired for range and accuracy will be fired also for destructive effect.

I have, &c.

(Signed) H. DYER, Captain R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

SIR, Shoeburyness, October 28, 1864.

I AM directed by the Armstrong and Whitworth Committee to acknowledge the receipt of your letter of the 19th, and to observe, that in their original programme made in February 1863, the Committee determined to test the destructive effect of the competitive projectiles "as common case;" but that application was made by you on the 18th January 1864 to supply 10 rounds of case shot for your guns, to which request the Committee acceded.

Some case shot similar in principle were subsequently supplied by the Royal Laboratory for Mr. Whitworth's gun. When the day was fixed for firing with case shot the Committee learned that those supplied by you were of a pattern which had been proposed after experiment at Shoeburyness, by Lieut. Reeves, R.A., for your guns.

Mr. Whitworth then objected to firing these case shot, on the ground that no experiments similar to those made by Lieutenant Reeves with your guns had been carried on to test their applicability to his system of rifling, and proposed to the Committee to prepare some case shot for experiment adapted to his system; to which proposition the Committee also acceded; and as you were in daily attendance at Shoeburyness in May last when these proceedings took place, the Committee consider that you must have been fully aware of this decision.

I am to add, that every latitude having been afforded to the competitors, by placing at their disposal 200 or more additional rounds to enable them to produce such projectiles as they might deem best calculated to develop the merits of their respective guns, the Committee consider that you could have brought forward pattern of case shot which in your opinion might have been best adapted for that purpose, in the same manner as you have done with other projectiles of a different pattern from those supplied by you previous to the 1st April 1864, and which have only been delivered to the Committee so late as the 30th September last.

I am further directed to state that as both you and Mr. Whitworth have from the first been represented by your respective nominees on the Committee, the Committee consider that you are both kept fully informed of such of their proceedings or decisions as may affect your respective interests, and that the Committee have always given their most attentive and careful consideration to any representations made to them connected therewith. The Committee therefore regret that you had not expressed a wish, after the experiments with case shot had been postponed in May last for the afore-mentioned reasons, to produce an improved pattern instead of deferring all mention of the subject until after the experiments had been made with Lieut. Reeve's case shot from your guns and with Mr. Whitworth's from his gun.

I have, &c.  
(Signed) H. DYER, Capt. R.A., and Major,  
Sir W. Armstrong, C.B. Secretary.

MY LORD, Shoeburyness, November 9, 1864.

As the Armstrong and Whitworth Committee have been unable to comply with the instructions of your Lordship, communicated to them in the letter of the Director of Ordnance, marked immediate, No: 80, G.M. No. 659, of the 27th February last, to carry on the competitive trial from day to day until it is finished, I am requested by them to submit the following statement in explanation of the delay which has already occurred, and the further delays which they anticipate in the future.

The Committee is the more desirous that your Lordship should be fully informed of these circumstances, as your Lordship on a previous occasion expressed regret that a necessary adjournment had taken place pending the supply of ammunition.

The Committee is now carrying on experiments at Portsmouth, and being anxious of expediting their operations had determined to continue their practice for range and accuracy simultaneously at Shoeburyness during the current week while the tides are suitable. They received, however, a letter from the Commandant at Shoeburyness dated October 31, informing them that on the 7th and 8th inst. the Ordnance Select Committee were to carry on experiments which the War Office are very anxious to have completed, and that the seven-gun battery on which the Committee's guns are mounted would not be available. The Committee accordingly were unable to carry on any practice on the 7th, and only partially on the 8th.

The Committee also received a letter from the Director of Ordnance, dated October 25, 57/Woolwich/5605, request-

ing them to state whether some arrangement could not be made by the Committee to demand such ammunition as they may require from day to day; to which the Committee, not understanding how they could possibly carry on the experiments at Shoeburyness without more ammunition than would suffice for one day's consumption, suggested on the 26th October that a barge should be sent to Shoeburyness to remain there and serve as a magazine until their experiments are completed. The Committee has received no reply to this communication, but on the arrival of 1,400 rounds of ammunition on the 4th inst. from Woolwich, it had to be returned in consequence of the magazines at Shoeburyness being full of ammunition for other experiments than those required by the Committee. They are therefore left with only 170 rounds per gun available for continuing their practice, and are seriously embarrassed in their proceedings.

The Committee have only further to observe, for your Lordship's information, that the loss of a few days when the tide suits for their experiments, entails a much longer delay than the mere actual loss of time.

I have, &c.  
(Signed) R. RUMLEY, Major-General,  
President.

The Right Hon. Earl de Grey and Ripon,  
Secretary of State for War,  
War Office.

SIR, Shoeburyness, December 20, 1864.

I AM directed to inform you, that unless the request contained in my letter of the 6th inst. is complied with on or before noon on January 1, 1865, the Committee will take upon themselves to strike out 10 per cent. of the rounds fired for range.

I am, &c.  
(Signed) H. DYER, Capt. R.A., and Major,  
Sir W. Armstrong, C.B., Secretary.  
Newcastle-on-Tyne.

SIR, Shoeburyness, December 20, 1864.

I AM directed to inform you, that unless the request contained in my letter of the 6th inst. is complied with on or before noon on January 1, 1865, the Committee will take upon themselves to strike out 10 per cent. of the rounds fired for range.

I am, &c.  
(Signed) H. DYER, Capt. R.A., and Major,  
J. Whitworth, Esq., Secretary.  
Manchester Ordnance Company, Manchester.

## ORDNANCE SELECT COMMITTEE.

Committee Minute, No. 14,413.  
Report, No. 3653.

6th March 1865.

## PRESENT:

Brigadier-General LEFROY, R.A.  
Captain L. G. HEATH, C.B., R.N.  
Colonel HOGGE, C.B., R.A.  
Colonel YOUNGHUSBAND, R.A.  
Lieut.-Colonel GALLWEY, R.E.  
Captain HEYMAN, R.A., Secretary.

SUBJECT:—ARMSTRONG GUNS AT SIMONOSAKI,  
5TH, 6TH, AND 7TH SEPTEMBER 1864.

## COMMITTEE'S REPORT.

*With reference to W.O. Minute, 29/12/64, on 73/3/6072.*

The action at the Straits of Simonosaki has followed that of Kagosima in little more than twelve months, and four of the ships engaged in the second operation were concerned in the first. No substantial change having taken place in the ships' armaments, the accidents and defects reported bear, as would be expected, much the same character.

No case is reported of a vent piece having been blown out on this occasion, although a serious escape of gas took place in one instance, a proof, perhaps, of improved training and greater experience. The material, however, was still of an early date and not calculated to do justice to the powers of the guns with all the improvements of detail that have been applied within the last two or three years. The accidents reported may be reduced to three classes:—

1st. Fracture of vent-pieces—

One 7-inch wrought iron (Taylor's) vent-piece split at the "Euryalus," 12th round on board the "Euryalus." It had previously fired 14 rounds at Kagosima.

Two 7-inch vent-pieces split slightly on board the "Barossa." "Barossa" during 65 rounds: material not stated.

Three 7-inch vent pieces (Taylor's wrought iron) on "Leopard" board the "Leopard" cracked as follows:—

Two in gun No. 273 during the firing of 35 rounds, and one in gun No. 363 during the firing of 51 rounds.

Three 7-inch vent pieces (material not stated) cracked on "Argus" board the "Argus," respectively at the first, the second, and the third rounds, and, having no more vent pieces, the gun was then disabled.

The captain of the "Argus" is less specific as to the number of the gun, the nature of the vent pieces, and other details than the other officers. It might be as well to publish a circular pointing out that accidents as occurred in such rapid succession on board this ship may frequently be avoided by changing the breech-screw, if there is a spare one at hand, or by removing it, and dressing the face to a true bearing with a file and straight edge. It is the breech-screw and not the vent pieces on which suspicion should fall in such cases. A straight edge is now issued for this purpose.

The gun in which these three vent pieces were broken should be carefully examined by an engineer, and the face of the breech screw adjusted.

Two 7-inch vent pieces of wrought iron, probably Taylor's "Coquette." R.G.F. make, on board the "Coquette," cracked respectively at the 40th and 60th round.

Two 40-pr. vent pieces (Taylor's wrought iron) on board "Barrosa." the "Barrosa" cracked, but it is not stated how many rounds they stood respectively. The guns in which they were used both fired 30 rounds.

"Leopard." One 40-pr. gun, E.O.C. was temporarily disabled at the 10th round, owing to an escape of gas which lifted the deck from the beams for several feet immediately above the vent. The vent piece could not be extracted, and the gun had to be changed during the action for its opposite gun. There can be no doubt that this accident was in consequence of careless screwing up.

One 12-pr. vent-piece (Taylor's wrought iron) cracked "Barrosa." on board the "Barrosa." The gun fired 36 rounds.

(2.) *Blowing out of vent-pieces.*

The only instance recorded, which can be considered as approaching the blowing out a vent piece, is the accident which occurred on board the "Leopard" and was clearly the result of negligence in screwing up. It is, however, an evil incidental to this system of breech-loading, and peculiarly liable to occur in the hurry of naval action.

(3.) *Jamming of 7-inch Vent Pieces.*

This is complained of on board the "Euryalus," "Tartar," and "Argus." It is sometimes caused by a little unevenness which an artificer can remove at once, sometimes by hard fouling easily washed away, sometimes by the expansion of the nose of the vent piece where it enters the bush from heat. An iron lever was introduced in May 1863 for the purpose of freeing the vent piece when jammed, but in all probability these vessels were not provided with this lever, and so the "Argus," like the "Racehorse" before Kagosima, suffered the serious inconvenience of having its fire from the gun arrested.

The Committee, however, are much surprised at the duration of this interruption, which is stated to have been 45 minutes, a time they would have supposed much more than sufficient to free the most obstinate jam.

*Efficiency of Pillar Fuzes.*

The "Tartar," "Leopard," and "Argus" complain of the uncertainty of the pillar fuzes, while on the other hand the "Coquette," "Perseus," and "Euryalus" remark that they were very effective, and the latter vessel in particular reports that "too much cannot be said in favour of the 7-inch common shell, which with its large bursting charge is a most terrible weapon. The pillar fuzes with which ours were fired seemed to burst very well indeed, in fact, none that we observed missed."

These contradictory statements are a repetition of what is stated to have occurred on board H.M.S. "Euryalus" and "Argus" in the action before Kagosima in August 1863, and the Committee are unable to suggest any fresh explanation. The pillar fuzes issued to these ships must have been from different supplies, and it is possible that the "Tartar" and "Leopard," as well as the "Argus," have some of the 2,358 unserviceable fuzes which have never been traced.\*

*Efficiency of Time Fuzes.*

The irregularity of burning of the time fuzes is complained of by the "Tartar," while on the other hand the "Perseus" remarks that although the shells burst short at ranges of 2,500 yards and upwards, within those ranges the fuzes acted admirably.

The fuzes are stated to be of white metal with the scale marked in degrees, reading from 0° to 5° 5' or 6° 10'. They are, therefore, of the obsolete pattern of 1861 or 1862, and it is to be regretted that they have not been recalled and replaced by fuzes of later pattern. The circumstance that the shells burst short when fired at ranges of 2,500 yards is what would naturally happen. The time of burning is only equivalent to a range of 1,700 yards or thereabouts. The Committee think the attention of the officer in command should be called to this circumstance. The Committee find nothing further for remark.

The fracture of vent pieces will, it is hoped, become of rarer occurrence when the charge is reduced to 11 lbs., a reduction recommended by them in Report No. 3085,† 23/11/63, and now authorized 73/3/6115, 21/1/65. The reduction of the shot and common shells to 90 lbs. weight, which is also authorized, but will require time to carry out, will still further reduce the strain, and it may be anticipated that even the Taylor's iron vent pieces will then last their proper time. It is not the fact of their cracking which constitutes the evil. Every gun is provided with three of them, and the natural cause of their becoming unserviceable is by cracking. The just cause of complaint is that this occurs so frequently before the vent piece has stood even 50 rounds, arguing material or workmanship of a quality very far below the standard which was supposed to have been attained. The expense of replacing every 7-inch vent piece of Taylor's iron with the best material now known

\* Min. 6039.

† Min. 10,407.

‡ Min. 14,343.

would probably not exceed 27,000*l.*; and although this is a large sum, it must be remembered that as there is scarcely any other serious complaint of the gun, such would be the whole price of restoring much of its prestige as to safety and serviceability.

On the whole the Committee think that the preponderance of testimony is favourable to efficiency of the Armstrong guns, projectiles, and fuzes on this occasion, notwithstanding that many of the stores are of obsolete patterns and of known inferior quality. The report of the gunner of H.M.S. "Perseus," forwarded by Captain Kingston with his approval, is particularly deserving notice, as showing that these guns have warm advocates as well as opponents among the officers of the fleet. It refers, however, to 40-prs. only and not to the 7-inch guns.

The frequent changes of detail in respect to Armstrong materiel within the last four years have pointed to the expediency of calling for a general inspection for the purpose of rectifying the confusion which no doubt exists, and of effecting the necessary replacements. Instructions are in course of preparation for the guidance of those officers who will be entrusted with the inquiry, and it is to be hoped that the steps about to be taken will lead to the immediate withdrawal of the vent pieces of early patterns, the unserviceable fuzes, and the obsolete stores of other kinds, whose continuance in the service brings discredit on the whole and shakes the confidence of the services in their materiel.

Lieut.-Colonel GALLWEY, R.E.  
Captain HEYMAN, R.A., Secretary.

SUBJECT:—ARMSTRONG GUNS AT KAGOSIMA, JAPAN,  
August 1863.

#### COMMITTEE'S REPORT.

With reference to W.O. letter, dated 11/12/63, 73/3/4709.

In returning the accompanying reports of the behaviour of the Armstrong guns on board Vice-Admiral Kuper's vessels in the engagements with the Japanese Forts at Kagosima on the 15th and 16th August 1863, the Committee have to point out that the defects which are commented upon by some of the commanding officers are for the most part familiar, and have been the subject of previous reports.

They may be reduced to three classes.

(1.) *Excessive recoil of the 110-pr. gun, endangering the carriage.*

This proves nothing more than that the gun is over charged for its weight. It may be met in two ways, (a) by reducing the charge, (b) by reducing the weight of the shot and shells, retaining the present charge, (b) by reducing the weight of the shot and shells, retaining the present charge, and so realizing a higher velocity. The 7-inch calibre is properly a 42-pr., and the Armstrong gun is actually somewhat lighter than the 42-pr. of 84 cwt., which had the former charge of 14 lbs., and but little heavier than the other 42-prs. of 75 cwt., which had the present charge of 12 lbs. Had that gun been fired double or triple shotted, with a full charge, no one would have been surprised by an excessive recoil, and the mechanical effects are the same, although the increased strength of the gun makes it safe to fire an elongated shot equal to two or three round shot from it. The Committee are now engaged on experiments to determine the best way in which to relieve this gun, and Sir Wm. Armstrong is engaged on a plan for more effectually checking recoil. It may therefore be hoped that this evil will be soon removed.

(2.) *Fracture of Vent Pieces.*

3 steel 40-pr. vent pieces cracked on board H.M. Ship *Euryalus*, respectively at the 13th, 15th, and 31st round

of the gun since received on board, it may be inferred at the same round of the vent piece, and 2 steel 40-pr. vent pieces in the same ship had their neck blown off at the 11th and 62nd round respectively, but are not described as having otherwise failed. In one case it is stated that the vent piece was screwed home, in the other that it was not.

These vent pieces were of the original E. O. Company make, of a material now known to be unsuitable, thinner in the proportion of 3·4 to 4·0 inches than the present pattern, and consequently weaker in about the proportion 11·5 to 16·0.

1. Royal Gun Factories 40-pr. vent piece, of Taylor's wrought iron, on board the "*Euryalus*," split at the 34th round.

2. Royal Gun Factories 40-pr. vent pieces, of Taylor's iron, were blown out, and the cross head blown away, on board H.M. Ship "*Perseus*," after 15 and 30 rounds respectively.

There can be no doubt that the last accident was the consequence of carelessness in screwing up, the breech screw being found after the explosion not nearly home. This material however (Taylor's wrought iron) is now known to be deficient in strength, and is no longer employed.

1. Royal Gun Factories 110-pr. vent piece of Taylor's wrought iron in the same vessel, was broken off at the neck at the 38th round.

(3.) *The Blowing out of Vent Pieces.*

This accident occurred twice on board the "*Perseus*," as stated above, but is not reported by any other vessel, and was clearly the result of negligence. It is, however, an evil incidental to this system of breech-loading. It does not appear whether these guns had indicator rings.

(4.) *Jamming of 110-pr. Vent Pieces.*

This is complained of on board the "*Racehorse*," and "*Argus*." It is an accident which occurs sometimes, and since May 1863\* an iron lever has been issued for the express purpose of freeing it. In all probability these vessels were not provided with this lever, and so the "*Racehorse*" suffered the serious inconvenience of having its fire from this gun arrested for about 25 minutes.

(5.) *Deficiency of Low Gauge Tin Cups noticed on board the "Coquette."*

It seems impossible to tell whether a gun will take high gauge or low gauge cups prior to experience with it, and the Committee would recommend that in all cases in which high or low gauge is not distinctly specified, the cups should be issued in duplicate, the full number of each, those which are found unsuitable to be returned to store at the first opportunity.

(6.) *Premature Explosion of Pillar Fuzes.*

This is complained of by the "*Argus*," which fired 7 common shells, and states that they all exploded 50 or 100 yards from the gun; on the other hand the "*Euryalus*" remarks that the action of the pillar fuzes was admirable. "Too much cannot be said in favour of the common shell fitted with pillar fuzes, which are certainly the most destructive projectiles now in use, not one appeared to miss or burst."

These contradictory statements leave no room to doubt that the fuzes were of different supplies. Possibly the "*Argus*" may have been furnished with some of the 2,358† pillar fuzes of an early delivery, which are known to be unfit for service, but have unfortunately been lost sight of and probably been issued in error. It is not likely that she had those of Royal Laboratory make referred to in the Report on the Newhaven Experiments.

The Committee have already suggested a further inquiry, which has been ordered. The Committee have nothing further to remark.

They enclose for the perusal of the Secretary of State, Sir Wm. Armstrong's letter on this subject, and in reference to the old pattern untempered steel vent pieces of 40 and 110-pr. guns, they think that wherever they exist they should be returned to store, and the latest pattern vent pieces be issued instead. If for 40-prs. of the original pattern it must be expressly so stated, as that gun will not, until altered, take the same vent piece as the G pattern gun, but there is a pattern for it, stronger than the original one. With respect to the Taylor iron 110-pr. vent pieces, which are much superior to the untempered steel ones, but inferior to those of Swedish iron, and of tempered steel, the Committee think it will become necessary that they should also be recalled as soon as possible, unless the contemplated reduc-

\* Cir. 835, § 769.

† Min. 6,089.

tion of charge or weight of shot for that gun should relieve them sufficiently to permit their use to be continued.

With respect to the 40-pr. vent pieces of Taylor's iron, they do not think there are at present sufficient grounds for recommending either the recall of these vent pieces or a reduction in the charge of the gun.

Assistant Secretary.

Brigadier-General, R.A.,  
President.

SIR,

I HAVE the honour to forward herewith for the information of the Lords Commissioners of the Admiralty reports called for by me from the "Euryalus," "Coquette," "Perseus," "Argus," and "Racehorse," containing all particulars respecting the Armstrong guns used in the recent action at Kagosima, the number of rounds fired, a statement of accidents, &c., with the opinion of the several officers in command of those vessels as to the general efficiency of the guns, which may be interesting.

I have, &c.

(Signed) AUGUSTUS L. KUPER,  
Vice-Admiral and Commander-in-Chief.

The Secretary of the Admiralty.

REMARKS ON THE PRACTICE made with the ARMSTRONG GUNS, of H.M.S. "EURYALUS" at KAGOSIMA, and the results of the firing on the guns.

The 110-pr. pivot gun was fired rapidly and with high elevations both on the 15th and 16th of August. The concussion was very great, especially when (on the 16th) 13 rounds were fired at 4,000 yards with an elevation of 12° and two rounds at extreme elevation. The rear chock of the carriage was broken off from the shears where train whip is rove, and the sides of the carriage were much shaken and cracked. The slide showed symptoms of giving way, but, as the screws in the rear post came out, it only bent slightly.

The vent piece which had the neck blown off on the 15th was properly screwed up, for when examined immediately afterwards, the post that remained was firmly fixed in its place and was only removed after some difficulty. There was nothing to show the cause of the accident, and the only way to account for it is by supposing that a flaw existed. As shown by the list of casualties it was made of

iron. The carriage is an old one (having been originally fitted for a 68-pr.) and would probably have suffered nearly as much had a smooth-bored gun been fired from it with the same elevations. The carriages and rear chocks should, however, be made much stronger, as when used with 68-prs. they were never submitted to so continued a strain, for the gun having three charges, the heaviest was only fired on rare occasions, whereas with Armstrong the charge is always the same. The practice made from this gun at long ranges was very good. Too much cannot be said in favour of the common shell fitted with a pillar fuze, which are certainly the most destructive projectiles now in use; not one appeared to miss bursting and they were very closely watched. The explosion could be heard distinctly at 4,000 yards.

For all purposes the pillar fuzes appear much better than either "Time" or "Moorsom's," the former requiring so much care in adjusting, and the latter not bursting when fired against earthworks.

When the distance varies greatly and it is desirable to keep up a rapid fire, their superiority to all others is very apparent, for merely touching the top of a parapet is sufficient to explode them.

With respect to the 40-pr. guns, the same complaint may be made as with the 100-pr., viz., that the carriages were not strong enough to bear continued firing at high elevations. Two beds were broken by the concussion. Six vent pieces were disabled, of which four had deep cracks right across, one had the neck blown off in the same manner as the 100-pr.; but in this case there can be no doubt the breech screw had not been set up properly; another had the handles and lock blown off from the same cause. In quick firing the vent pieces get heated and expand, and when they cool again the copper rings drop off. This only occurred in two cases, and then to the cracked vent pieces. The damage done to the grooves of the guns was in all cases slight and hardly noticeable. The broadside 110-prs. were not fired often, and consequently no accidents happened to them. They appear to be the only ones that have carriages strong enough to stand the concussion of continued firing at high elevations. As shell guns they are very valuable on the main deck, but the ports will not allow sufficient elevation to be given them, so that they may be used at the same distances as upper deck guns.

## RETURN OF ARMSTRONG GUNS on board this Ship.

| Register No. | Description.           |                           |             | No. of Rounds fired.     |                          |                 | Accidents.                                                       |                           |                   |                | Remarks.                                                                                                                                                                                                                                                                                                          |

| 110-pr.        | R. G. F. No. 559. 1861. | Chatham, in August 1862. | lbs. 12 | 2     | 13             | 7             | 22*        | The rifling of the 110-pr. is slightly broken, but of no serious consequence. The gun requires new re-facing. The common shells that were fired with pillar fuzes from the 110-pr. all exploded between 50 and 100 yards, and we have every reason to believe that a shell burst in the gun, which damaged the rifling as mentioned. The segment shell and shot were very accurate.<br>Our opinion as to the efficiency of the 110-pr. Armstrong gun is, that the vent-piece continually jamming, and its great weight, is a serious drawback to quick firing, and is not a good gun for short ranges. This does not apply to the 12-pr., which may be fired very quickly and with precision. |
| 12-pr.         | R. G. F. No. 17. 1861.  |                          | 2½      | 0     | 12             | —             | 12         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

L.                                 | None                    | None   | 2 shot, 15 shell (segment).                | The trail of carriage broken on the 17th round.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 110-pr. Armstrong. 81 cwt. 1 qr. 10 lbs. Length, 10 feet. | On trunnion R.G.F. No. 165. Date 1861. Doubled bushed iron. Projectiles marked R. L. | Shot, 2; Shell, 4.      | 2      | Shot 24, segment shell 23, common shell 4. | During the first day of the engagement at Kagosima great difficulty was found in getting the 110-pounder to go off, from the quantity of rain falling, which so thoroughly wetted the vent piece, and ran into the interior of the chamber, that it was found necessary to unload the gun three times to replace the cartridges which had got wet.<br>Besides this, the gun missed fire eight or nine times. This occasioned great delay at a time when it was of great importance to get the gun fired as soon as possible. On trying to remove it with |

ance we should keep up a rapid fire. After the 15th round the vent piece got jammed so hard in the breech that on trying to remove it with levers and handspikes one of the handles came off.  
From this accident the firing of the gun was delayed for at least 25 minutes. During the whole of this time the smooth-bore guns which were being fired under the same adverse circumstances kept up a continuous and rapid fire.  
On the second day the vent piece jammed twice, and on one of the occasions it caused a delay of 10 minutes in the firing of the gun.  
From the experience I have had of this gun during the operations at Kagosima, I am of opinion that, for general service, it is not so efficient as the 68-pounder 95-cwt. gun, and that it would be improving the armament of this ship were one of the latter supplied in lieu of it.

(Signed) C. B. BOXER, Commander.

SIR, Admiralty, 23rd December 1864.

I AM commanded by my Lords Commissioners of the Admiralty to send you herewith, for the information of the Secretary of State for War, a copy of a letter from the Commander-in-Chief on the China Station, dated the 7th October last, with eight enclosures, forwarding reports on the Armstrong guns engaged in the recent operations in the Straits of Simono Seki, Japan.

I am, &amp;c.

The Under Secretary  
of State for War.

W. G. ROMAINE.

reports, from the ships named in the margin, on the performance of the Armstrong guns engaged in the recent operations in the Straits of Simono Seki.

2. My late experience of the working of these guns has served to confirm me in my opinion that the vent pieces, as at present fitted, and particularly in the 110-pounder gun, are too easily put out of order to render the guns perfectly efficient as a naval weapon.

I have, &amp;c.

(Signed) AUGUSTUS L. KUPER,  
The Secretary of the Admiralty, Vice-Admiral and  
&c. &c. Commander-in-Chief.

REPORTS ON ARMSTRONG GUNS engaged at SIMONO SEKI.

(Copy.)

"Euryalus," at Yokohama,  
7th October 1864.

SIR, I HAVE the honour to forward herewith, for the information of the Lords Commissioners of the Admiralty,

REPORT of ARMSTRONG GUNS of H.M.S. "Euryalus," fired during the engagements with the Forts at Simono Seki, on the 6th September 1864.

110-pr. No. 96. From this gun 25 rounds were fired, 22 common shell pillar fuze, and 3 shot. The first 12 rounds were fired with vent piece No. 958, Taylor's wrought iron R. G. F., which then split across the back and was changed for No. 774, Taylor's wrought iron R. G. F., which

F f

was used for firing the remaining rounds without sustaining any injury. The gun being still loaded prevents an examination of the grooves, but up to the last time of loading no damage had been observed. The total number of rounds fired with the broken vent piece, No. 958, was 26, viz., 14 at Kagosima and 12 on this occasion.

|                |                            |            |
|----------------|----------------------------|------------|
| 40-pr., No. 9, | fired 1 shot and shell     | no damage. |
| " " 45         | " 1 shot                   | no damage. |
| " " 40         | " 1 shot                   | no damage. |
| " " 7          | " 1 shot 3 shells (segt.), | no damage. |
| " " 52         | " 1 shot 1 shell (segt.),  | no damage. |
| " " 80         | " 1 shot 2 shells (segt.), | no damage. |
| " " 211        | " 1 shot 3 shells (segt.), | no damage. |
| 20-pr., " 96   | " 1 shot 1 shell (segt.),  | no damage. |

The 40-prs. being still loaded cannot be examined. None of the vent pieces have sustained any injury.

#### REMARKS.

The 110-pr. pivot gun was fired, at distances ranging from 2,500 to 4,500 yards, with deviations from 7 to 13 degrees. For the first five rounds the gun worked easily, but after the fifth the vent piece began to swell considerably, so that some difficulty was found in getting it out after the breech was unscrewed; this difficulty continued to increase until after the 12th round, when the gun was delayed for about five minutes by the impossibility of getting it out until it had cooled a little. The vent piece by which it was replaced showed no signs of swelling during the 13 rounds which were fired with it.

Considerable difficulty was found in forcing home the shell after the first five rounds, as the inner part of the breech screw became buried by the shock of the recoil; sometimes it took 10 men to ram it home; once beyond the breech screw, however, it went up easily enough into the seat of the shot.

When firing at short ranges (up to about seven degrees) the gun can be worked quickly, as no great strain is brought upon any part, and the gun can be re-loaded directly after being run out, without elevation; with more than seven degrees elevation, however, the bed has to be removed, and the elevating screw can no longer be used. The strain upon the coin is so great that it invariably flies out and lets the gun down on the rear chock, so that time is lost in loading, as the gun must be elevated to allow the men who ram home the projectile to bring their whole strength upon the rammer.

None of these disadvantages are felt in the 40-prs., which being so much lighter are easily managed; those belonging to this ship, however, were not used often enough to give us a good opportunity of judging.

There seems to be one defect in all the Armstrong carriages which might easily be remedied; none of them are made high enough in the fore part to give the gun the elevation corresponding to its great range. If the carriages for the 40-pr. quarter deck guns were made much higher and the hammock nettings made to unship, an elevation of 11 or 12 degrees might be given without removing the elevating screw, which would be a great convenience and much facilitate the working of the gun at long ranges.

Too much cannot be said in favour of the 110-pr. common shell, which, from its large bursting charge, is a most terrible weapon. The pillar fuzes with which all ours were fired, seemed to burst very well indeed, in fact none that we observed missed; whether they would do so at shorter ranges when the shock of striking would not be so great we have had no opportunities of judging.

The difficulty caused by the expansion of the vent pieces by heat might be guarded against by keeping three at each gun during action and using them for five rounds alternately; each might then be carefully cleaned and examined before being used again, so that the slightest flaw might be at once detected. If one vent piece be used for a long time it might be seriously cracked without attracting notice. The breech screw, which generally works rather hard after a few rounds have been fired, might be eased considerably by being run out to the end and washed down with a few buckets of water.

(Signed) RICHARD E. TRACEY,  
Gunnery Lieutenant.

Approved,  
W. M. HOWELL,  
Captain.

#### REPORT ON THE ARMSTRONG GUNS.

H.M.S. "Tartar," Inland Sea, Japan,  
21st September 1864.

SIR,

WITH reference to your general memorandum of the 14th instant, relative to the efficiency of the Armstrong guns, I have the honour to state that I consider its accuracy and power make it very valuable as a long range gun; but for any distance not much exceeding 1,500 yards (more particularly for naval action, when a few minutes delay in firing might be fatal) I consider the 95-cwt. smooth bore, on the whole, its equal, though the effect of the spherical shell is certainly very much less.

2. The jamming or splitting of the vent piece I consider the chief objection to this description of gun (110-pr.) on board the "Tartar;" in my opinion this is chiefly attributable to these guns being overcharged (unless when extraordinary range or penetration is required) when the great and possibly useless resistance to the shot is considered.

3. On the 5th September about 50 rounds were fired with the same vent piece, no delay or accident of any sort occurring, the gun and vent piece remaining uninjured. On the 6th the vent piece showed several marks cut by the gas after eight or ten rounds had been fired, the cuts or flaws being about  $\frac{3}{8}$  of an inch deep and  $\frac{1}{4}$  broad. A new vent piece was now used, which jammed slightly the first round, requiring the end of a handspike to remove it; it jammed again after about 10 rounds, giving more trouble and causing a loss of several minutes to clear it, the vent piece apparently uninjured. About the 20th round the vent piece again jammed so firmly that it required 10 minutes to remove it; this was done by a rammer from the muzzle struck by a maul, while a handspike was used in the loops.

4. On the 8th the gun was again used with the same (or second) vent piece, and fired about 28 times at ranges from 4,000 to 2,500 yards; nothing was observed to go wrong till the firing ceased, when the vent piece was found to be split near the centre of bottom, extending two inches, and half an inch deep, apparently a welding or previous flaw in the metal. Both these vent pieces are still serviceable, the first having been refaced. A considerable flaw was also found in the bush ring, as described in the accompanying report. The bush has been replaced, and the gun is now ready for any service, but as a shell still remains in it, it is impossible to examine the bore minutely; this will be done as soon as possible, and a further report sent should there appear anything worthy of remark.

5. The whole of the fuzes supplied for this gun, both time and pillar, proved very uncertain, the former nearly always burning short of the time set for, and not half of the latter exploding on striking, the object struck being dry clay and sand, and in some places gravel; they never exploded on striking the water; one shell with pillar fuze open at the end burst on leaving the gun; those closed at the rear are marked E x 1 A.P.; the open ones are marked T A, and on the open end P.

6. The smoke from these guns (caused by the lubrication I suppose) is in some instances very inconvenient. Both on the 5th and 6th of September, though there was light breeze sufficient to clear the smoke from an ordinary gun in time to see where the shot struck at a range of 1,700 yards, the thick yellowed smoke from the Armstrong gun prevented our doing so. It was impossible to say exactly what shells did or did not explode, as the smoke from the enemy's guns had exactly the same appearance from the ship; very many of Moorsom shells from our 8-inch broadside guns certainly *did not* explode on striking, and I believe the metal time fuzes used with the same guns seldom exploded after burying themselves in the clay or sand.

7. The fuzes of the French shells thrown from their well-shooting rifled guns apparently gave about the same results.

(Signed) JOHN M. HAYES,

Vice-Admiral  
Sir Augustus L. Kuper, K.C.B.,  
Commander-in-Chief.

Captain.

## ARMSTRONG GUNS.

Report from H.M.S. "TARTAR," September 17, 1864.

| Name of Ship. | Nature of Gun, with its No. and Description Marks; also date of issue, and whence.                                                                     | Particulars of Manufacture.               | Details of Flaws, recorded up to Date of last Return.                                                                                                                                                                                                                                                              | Total Rounds fired up to Date of last Return. |       |        | Fired during the recent Operations at Simonosaki. | Details of Flaws developed during current Quarter, annexing No. when they are new ones.                                                                                                                                                                                                                                                                                                                                                              | Vent Pieces, Material, Pattern, and Number of Rounds Fired with each.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                | If Breech Shot, No. of Shots. | Other Accidents, and general Remarks applying to Ammunition, Fuzes, &c.                                                                                                                                                                                                                                                                                                                                                                        |

Breech, bush, iron, thin. | Slight flaw in bore at $\frac{1}{4}$ L. of up. 1 L. Flaw $\frac{1}{2}$ L. D. Slight flaw 10 L. of up. 13 $\frac{1}{2}$ L. of up. 29 L. of D. to up. Slight flaw 45 $\frac{1}{2}$ R., 79 $\frac{1}{2}$ L., 59 $\frac{1}{2}$ less. Slight flaw in powder chamber at 5 $\frac{1}{4}$ , 4 d, 6 $\frac{1}{2}$ L. of up. | Nil.                                          | —     | 5      | 84                                                | No alteration appears to have taken place in the flaws previously reported; but as a shell is still in the gun, it is impossible to make full examination. This will be done as soon as the shell can be removed, and a further report made. Bush report damaged, apparently. Welding flaws $\frac{1}{2}$ of an inch from seat of vent piece, extending from bottom 4 inches up left, has been replaced, and the gun to all appearances serviceable. | No. 5. 4 wrought iron. 1 Swedish iron. R. No. 256. Cammelle's Swedish iron. New pattern. Damaged in upper quarter round edge of fitting face left of neck, apparently caused by gas escaping between vent piece and bush ring. Flaws $\frac{1}{2}$ of an inch deep, and $\frac{1}{4}$ of an inch in width. Refaced. Still serviceable. Shifted at the 60th round. Vent piece No. 932, O.P. Taylor's wrought iron welding. Flaw in centre of bottom extending 2 inches round, and probably $\frac{1}{2}$ an inch deep. 30 rounds fired. Flaw not observed till after action. Still serviceable. | None                                           | No                            | Accidents, none. Gun was found to work well. Vent piece No. 932 jammed 3 times; twice easily removed, third time required great force to remove it. Ammunition found to be good. Fuzes: — White metal fuzes were observed to burst before reaching the distance required. Pillar fuzes were not observed to burst regularly. The rapid firing in action, and consequent smoke, renders it impossible to give an accurate account of the fuzes. |

(Signed) J. M. HAYES, Captain.

## Forwarding REPORT ON THE ARMSTRONG GUNS.

H.M.S. "Conqueror," at Simono Seki,  
15th September 1864.

SIR, In compliance with your memorandum of the 14th instant, I have the honour to enclose a return of the Armstrong guns on board Her Majesty's ship under my command. The amount of firing was too small really to test

the efficiency of the guns, but so far as it went the practice was satisfactory, the range accurate, and the shells (pillar fuzes) all burst.

I have, &c.  
(Signed) W. G. LUARD,  
Captain.

Vice-Admiral  
Sir A. L. Kuper, K.C.B.,  
Commander-in-Chief.

H.M.S. "Conqueror," Simono Seki, 14th September 1864.

(Signed) W. H. CUMING,  
Acting Commander in temporary charge.

Forwarding a REPORT of the ARMSTRONG GUNS on board H.M.S. "Leopard."

Straits of Simono Seki, Japan,

15th September 1864.

SIR,

I HAVE the honour to enclose in duplicate, in compliance with your order, a detailed report of the performance of the Armstrong guns on board this ship.

The vent pieces, three in number, injured, are all wrought iron, and all similarly cracked; these cracks being all below the circular slot that enters the base of the chamber, I think proves that, from the direction of the vent, the lower portion of the charge is not exploded instantaneously with the upper portion, thereby bringing the strain on the upper half-face of the vent piece. No vent pieces were blown out of the gun.

The 40-pounder, No. 6 on the enclosed list, when fired made a great explosion, lifting the deck from the beams for several feet of the surface above the vent; the gun was temporarily disabled, the vent piece able to be moved but not extracted; the upper edge was "burred," and had to be filed, as also the upper edge of the bore of the chamber; a very slight touch of the file cleared it, and the gun seems uninjured; it had, however, to be changed during the action for its opposite gun.

The range of the 40-pounders was very good indeed, as also of the 110-pounders, and their practice excellent, until the 110-pounder marked No. 2 became, I fancy, leaded near the chamber, when at least the last right shot seemed to strip, and with a loud whirring noise went anywhere; one shot struck the water at long range, and turned at nearly a right angle; all ricochets turned to the right with the Armstrong shot.

The Armstrong 110-pounder guns in H.M.S. "Leopard," on a rear chock carriage, with the exception of one; no breeching was carried away nor breeching bolts drawn; the 68-pounder on a slide started breeching bolts, and

carried away one breeching, but the ship is old. The rear chock carriages are uninjured.

No time fuzes were used with Armstrong shell, only pillar fuzes; three of these burst alongside, one close to the muzzle of the gun; several of these shells were seen to burst, but I believe many did not. The pillar fuzes, as supplied to this ship are, in my opinion, not to be trusted for covering landing parties, nor for firing near other ships.

From the 110-pounder Armstrong marked No. 1 on the list, two or three shots laterly stripped and "wabbled."

In all the practice during the commission of this ship no accident has happened to any Armstrong gun, although many shots have stripped and "wabbled," until during this action, a period of nearly two years. I attribute these accidents recorded to the heating of the guns and vent pieces, the rifling becoming leaded, rendering all aim uncertain. The captains of the guns being chiefly seamen gunners or gunner's mates, the same as throughout the commission.

I do not think it can be put down to careless loading from excitement.

In the face of this positive evidence, I must express my opinion that I do not think the 110-pounder Armstrong gun the gun for sea service, not only for the above recorded faults, but for the immense amount of room required in the ship for the stowage of a comparatively very few rounds per gun, nearly half the ammunition on board when completed for these guns being expended in two hours firing, and that slow and careful firing.

The 68-pounder gun fired more rounds than any of the Armstrong 110-pounders, every shot and every shell telling beautifully. This gun made perfect practice; the breeching it carried away was old. I have, &c.

(Signed) CHARLES LECKIE,  
Captain.

Reporting the ACCIDENTS, &c. which occurred to the  
ARMSTRONG GUNS on board this ship.

H.M.S. "Argus,"

Sir, Simonoseki, 19th September 1864.

IN compliance with your memo. of the 14th instant, I beg to forward you a report in duplicate, relative to the Armstrong guns on board this ship, the number of times they were fired, their efficiency, and the accidents or damage which happened to them, during the late operations against the Japanese batteries.

| Nature of the Gun.  | No. | No. of times fired. |
|---------------------|-----|---------------------|
| 110-pr. Armstrong - | 1   | Nine.               |
| 12-pr. Armstrong -  | 2   | Twenty-eight.       |

Firstly. With reference to the 110-pr. on the third round, after commencing the action, the gun being loaded with common shell, pillar fuze, and a 12-pound charge, the vent piece was split and became so fixed in the slot that for 45 minutes it defied all the efforts of levers, screw-jacks, crow-bars, and sledge-hammers to extricate it, but eventually was freed by the mechanical ingenuity of Mr. Robert Hodge, engineer in charge; a new vent piece was then introduced, which under the same circumstances of loading as before split on the third round after being first used. A third vent piece was then tried, which also split on the second round, and having no further spare vent pieces, the 110-pr. became useless. My opinion regarding

the 110-pr. Armstrong gun, is that no certain dependence can be placed upon it, and I should extremely regret being again dependent on such a gun in action. I also have to observe, that from the stripping of the lead, and the uncertainty of bursting of the pillar fuzes, I found it impossible to cover the landing of the marines and naval brigade with the Armstrong gun.

The 12-pr. Armstrong guns had no accident or damage happen to them, they did their work efficiently but could not be trusted to cover the landing of the marines and naval brigade, on account of the liability of the lead-coating to strip.

(Signed) J. MORESBY,  
Vice-Admiral  
Sir A. L. Kuper, K.C.B.,  
Commander-in-Chief.

#### Forwarding REPORT OF ARMSTRONG GUNS.

H.M.S. "Perseus,"

Sir, Yokohama, 22nd September 1864.

IN accordance with your memo. of the 14th instant, I have the honour to forward a report of the Armstrong guns of this ship; I also enclose a report of the same made to me by Mr. Cockram, gunner of this ship, which is a most able account of their performances.

I have, &c.  
(Signed) AUGUSTUS KINGSTON,  
Vice Admiral  
Sir A. L. Kuper, K.C.B.,  
Commander-in-Chief.

H.M.S. "Perseus," at Yokohama, 22nd September 1864.

REPORT upon the ARMSTRONG GUNS on board H.M.S. "Perseus," in accordance with Commander-in-Chief's General Memorandum, dated 14th September 1864.

| Number. | Description.                                                               | Number of Times fired. | Opinions as to the efficiency of the Guns.                                                                                                                                                                                                                                                                                                                                                                                                                   | Particulars of any Accident or Damage which may have happened to them during the recent Operations in the Straits of Simonosaki.                                                                                                                                                                                                   |
|---------|----------------------------------------------------------------------------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30      | E. O. C. 1860<br>Armstrong 40-pounder.<br>31 cwt., 10 feet.                | 33                     | I consider the 40-pounder Armstrong a most efficient gun, if handled by properly trained men, and with proper care. The five 40-pounders of this ship were used successively for three days, and no accident of any kind or any trouble occurred to them. The practice made by the guns was most accurate to the extent of 3,500 yards. The time fuzes were also very accurate up to their full range of 2,400 yards. I have the highest opinion of the gun. | No accident of any kind happened to the guns; two of them were hoisted out of the ship for the purpose of lightening her when on shore without receiving any damage. Circumstances obliged these guns to remain loaded for a full week in wet and rainy weather, and on being discharged subsequently not one of them missed fire. |

(Signed) AUGUSTUS KINGSTON, Commander.

H.M.S. "Perseus,"

22nd September 1864.

Sir, IN the action at Simonoseki on the 5th, 6th, and 7th inst., I have to report most favourably of the 40-pr. Armstrong guns on board this ship.

The practice itself was both rapid and accurate, and the guns worked admirably, not the slightest delay or accident having occurred to either vent pieces or guns.

A bucket of fresh water was in readiness at each of the guns in the event of the screws working stiff to wash the ends of the breech screws by pouring a little water down the slot, or by taking them out altogether; it was only made use of in one instance, and that was at the pivot gun, where the screw was found to work a little stiff after firing about a dozen rounds, a little water was then applied down the slot to the end of the screw after which a little oil, the screw then worked as easily as at the commencement of the firing.

Ninety-five rounds were fired altogether from the five guns, 80 rounds with shells and 15 with shot. The time fuzes were very good as far as they ranged leaving nothing

to be desired beyond a little longer fuze, so as to ensure the shells bursting at the greatest range it is possible to fire them on board ship.

When firing at long ranges, 2,500 yards and upwards, with time fuzes the shells burst short; the fuzes used were marked from 5° 50' to 6° 10', within those ranges the fuzes acted admirably.

The pillar percussion were used at long ranges and were found very effective; a few did not burst on striking but the majority did.

The escape of gas was not perceivable and match tubes were very little used, not a single miss fire having resulted in their not being used, and no difficulty was experienced in loading, the projectile and charge going home quite easily.

During the whole of the firing, which continued at intervals for three days from the Armstrong guns, neither of the guns were sponged or breech screws removed or cleaned in any way, with the single exception of the pivot gun, and that was done more as an experiment than from any actual necessity at the time for doing it. The captains of the

guns have been questioned about the guns, and they speak very favourably of them and have the greatest confidence in them.

The foregoing remarks are the result of my own observations, having fired and attended at the guns during the greater part of the firing. My own conclusions are that the guns are a decided success every way, and with a moderate amount of care are perfectly safe on board ship and are fully equal to anything required of them.

I remain, &c.

(Signed) CHAS. COCKRAN,

Gunner.

To Capt. A. J. Kingston,  
H.M.S. "Perseus."

#### REPORT ON 110-PR. ARMSTRONG GUN.

H.M.S. "Coquette," Straits of Simonoseki,  
14th September 1864.

SIR,

WITH reference to your memo. of this day's date requesting a report to be made on the Armstrong guns during the late operations at Simonoseki, I have the honour to acquaint you that about 67 rounds of shot and shell were fired from that piece of ordnance, 110-pr. Armstrong guns, 1 in. No.—No. 177, R.G.F.

After the first day's firing, during which period 40 rounds

were fired, the vent piece was discovered to be split on the lower part of the back surface, immediately below the ring, a crack running horizontally across. The lower part of the breech screw was burred, the breech ring split, and also burred, so as to prevent any projectile from being rammed home. The burrs were filed down and a new vent piece substituted the second day, which after about 6 rounds split in the same place. A third vent piece was substituted, and the remaining 21 rounds were fired during the day without any further accident, with the exception of having twice to file down the burrs and the damaged breech ring.

The vent pieces, which are of wrought-iron, are marked No. 154, R.G.F., and 440 A.G.F., and I attribute the splitting of the vent pieces and breech ring to bad metal.

I have to observe that the gun was re-ringed at Yokohama in June last, and that no practice had taken place since that event.

The practice from the gun was very good, and the different projectiles bursting, with one or two exceptions, where required.

The rifling of the gun has sustained no injury.

I have, &c.

(Signed) ARTHUR G. R. ROE,  
Commander.

Vice Admiral,

Sir A. J. Kuper, K.C.B.,  
Commander-in-Chief.

REPORT of EXAMINATION of Three 12-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 18/4/64, and after firing 208 rounds continuous firing, 20/4/64.

No. 38, E.O.C. 12-pr. BREECH-LOADING ARMSTRONG RIFLE GUN.

Dimensions of bore and chamber not altered. Slight flaws in powder chamber at 3½" "Left" and 4" "Right of "up" and "Right of down." These are apparently slight defects or blisters in the steel.

*Examination after firing 208 rounds continuous firing.*—The slight flaws or defects in powder chamber have increased considerably in length, they now having the appearance of slight cracks, measuring from 3" to 3·6" in length "Left," from 3·3" to 4·1" and from 2·1" to 2·8" "Right of up," and from 3·4" to 4·1" "Right of down."

*Breech copper* expanded ·02 of an inch, and worn at seat.

*Breech piece* scored in slot hole by escape of gas. Lever set fast, caused by the keep pin breaking across the spring, causing a burr to be thrown up on the edge of the groove of the breech screw.

*Vent piece No. 1.*, Swedish iron.—Fire hole in face and copper ring very much worn.

*Vent piece No. 2.*, Cammell's steel.—Copper ring very much worn.

*Vent piece, No. 3.*, Swedish iron.—Fire hole in face and copper ring very much worn.

No. 52, E.O.C. 12-pr. MUZZLE-LOADING SHUNT RIFLE GUN.

*Dimensions* of bore not altered. Bore and grooves slightly scored by gas from 8" to 16 inches from end of bore nearly all round.

*Examination after 208 rounds continuous firing.*—Scoring in bore and grooves slightly increased, extending from 8 to 19 inches from end of bore.

No. 264, WHITWORTH MUZZLE-LOADING RIFLE GUN.

*Bore expanded* at 12 inches from bottom ·003 of an inch, but clear from flaws.

*Examination after 208 rounds continuous firing.*—Slight fissures in front of vent, 7 of an inch long, and in rear ·075 of an inch long from edge of copper bouche.

*Very slight dent* in bore at 12½ inches from bottom, Left of up; slight marks on lands from 9·8 to 10·2 down.

21/4/64. RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of Three 12-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 23rd April 1864.

No. 38, E.O.C. 12-pr. ARMSTRONG BREECH-LOADING RIFLE GUN.

Flaws in bore in the same condition as reported 20/4/64.

No. 52, E.O.C. 12-pr. MUZZLE-LOADING SHUNT RIFLE GUN.

Slight opening or wearing away round the edge of copper bouche. Diameter of vent ·23 of an inch. In other respects the examination is the same as reported 20/4/64.

No. 264, WHITWORTH MUZZLE-LOADING RIFLE GUN.

The vent of this gun has been changed since the last examination, the bottom or cone of the vent having been increased from ·5 to ·6 of an inch in diameter, the front part of the cone has also been cut or filed out in an irregular form, and the copper set into it, by which means the fissure in front of vent has been shortened about ·15 of an inch; the slight fissure in rear of the vent has also been taken out by the enlargement. In other respects the examination is the same as reported 20/4/64.

An impression showing the alteration of the vent was left at Shoeburyness for the information of the Committee.

26/4/64. RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of Three 12-pr. Competitive Guns for the Armstrong and Whitworth Committee at Shoeburyness, 30/4/64.

No. 38, 12-pr. E.O.C. BREECH-LOADING RIFLE GUN.

Shot chamber expanded about ·002 of an inch. In other respects the examination is the same as reported 23/4/64.

No. 52, 12-pr. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

The scoring by escape of gas very much increased, especially in the grooves, which are deepened at the part scored about ·04 of an inch, and extends from 8 to 19 inches from the bottom of bore.

No. 264, 12-pr. MUZZLE-LOADING RIFLE GUN,  
(WHITWORTH).

Slight marks of wearing on bearing side of grooves from 13 to 42 inches from bottom of bore. Fissure in front of vent slightly increased in depth, and to ·75 of an inch in length.

The remarks in reference to the irregular form, and cutting or filing away of the bottom of the cone of the vent in this gun, as reported on examination 23/4/64, should be cancelled, as the impressions taken on the present examination shows the bottom of the vent to be perfectly round, and the fissure in its original form.

The impressions taken 23/4/64 were taken after the gun had been re-bouched, and before it had been fired, so that probably a small portion of the copper had been forced over the edge of the cone and into the portion of the fissure, thus giving the irregular form and the shortening of the fissure, as shown on the impression.

5/5/64. RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of Three 12-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 16th May 1864.

No. 38, E.O.C., 12-pr. ARMSTRONG BREECH-LOADING RIFLE GUN.

Fissures in powder chamber slightly increased in length, the present length being from 2·9 to 3·7 left, from 3·2 to 4·2, and from 2·1 to 2·9 right of up, and from 3·25 to 4·2 right of down. Slight opening of point of copper ring.

Dimensions of powder and shot chamber as reported 30/4/64.

No. 52, E.O.C. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

Bore expanded at 8 inches from bottom ·003 of an inch, slight fissures in front of vent ·2 and ·075 of an inch long.

The scoring in the bore and grooves is also considerably increased in depth, the measurement being as follows:—

|                       |                 |                 |
|-----------------------|-----------------|-----------------|
| Position of groove at | Up depth -      | ·04 of an inch. |
| breech end.           | Right of down - | ·06 „           |
|                       | Left of down -  | ·08 „           |

The depth of the scoring in the bore is ·04 of an inch.

No. 264, WHITWORTH MUZZLE-LOADING RIFLE GUN.

The fissure previously reported in the front of the vent of this gun has been partially filed out since the last examination, but it has apparently increased in depth. There are also two other fissures in front of the vent, which have become more plainly developed with the recent firing. These were observed but not reported on the last examination, as the impressions did not show them very distinctly.

The length of the fissures in front of vent on the present examination is as follows:—

Fissure (previously reported) ·45 of an inch long from edge of bouche.

Fissure recently developed commencing at ·2 and extending to 1·4 inch from edge of bouche, and the other commencing at 1·2 and extending to 2·9 inch from edge of bouche.

The copper bouche projects into the bore about .05 of an inch, and is slightly worn round edge of cone.

Slight scoring by escape of gas from 7 to 11 inches from end of bore on loading side of grooves "up."

Wearing on bearing side of grooves slightly increased.

Expansion in bore at 12 inches from bottom .004 of an inch.

17/5/64.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

#### REPORT of EXAMINATION of Three 12-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoe-buryness, 4th June 1864.

##### No. 38, E.O.C. ARMSTRONG BREECH-LOADING RIFLE GUN.

Dimensions and fissures in powder chamber as reported 16th May 1864.

##### No. 52, E.O.C. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

Slight fissures in front of vent .3 of an inch long. The scoring by escape of gas has also slightly increased, both in the bore and in the grooves; the depth of the scoring in the bore is about .05 of an inch, and in the grooves as follows:—

|                                           |               |   |   |     |
|-------------------------------------------|---------------|---|---|-----|
| Position of groove at breech end of bore. | Up depth      | - | - | .06 |
|                                           | Right of down | - | - | .08 |
|                                           | Left of down  | - | - | .09 |

Dimensions of bore as reported 16th May 1864.

##### No. 264, WHITWORTH MUZZLE-LOADING RIFLE GUN.

Fissures in front of vent increased in length about .1 of an inch. The copper bouche projects into the bore about .1 of an inch, and a lip of copper left in front covers the fissure reported 16/5/64 as .45 of an inch long; the bottom of copper bouche is also increased from .7 of an inch to 1.2 in diameter. In other respects the gun is in the same condition as reported 16th May 1864.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

Inspector of Ordnance.

#### REPORT of EXAMINATION of Three 12-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoe-buryness, 11th June 1864.

##### No. 38, E.O.C. ARMSTRONG BREECH-LOADING RIFLE GUN.

Fissure in powder chamber "left" increased about .5 of an inch in length; the remainder as before.

Slight opening of point of copper ring. A considerable amount of expansion has also taken place in the bore of this gun, commencing immediately in front of the shot

chamber, and extending to about 30 inches from the slot hole. The diameter is as follows:—

|                                                                    |                                               |   |   |   |        |
|--------------------------------------------------------------------|-----------------------------------------------|---|---|---|--------|
| Diameter in bore and shot chamber (distance taken from slot hole). | At 10½" in shot chamber                       | - | - | - | 3.066  |
|                                                                    | " 12 "                                        | - | - | - | 3.067  |
|                                                                    | " 13½ in front of shot chamber                | - | - | - | 3.029  |
|                                                                    | " 15 "                                        | - | - | - | 3.039  |

|                                                                    | " 21 "                                        | - | - | - | 3.0085 |
|                                                                    | " 22 "                                        | - | - | - | 3.011  |
|                                                                    | " 23 "                                        | - | - | - | 3.013  |
|                                                                    | " 24 "                                        | - | - | - | 3.016  |
|                                                                    | " 25 "                                        | - | - | - | 3.016  |
|                                                                    | " 26 "                                        | - | - | - | 3.013  |
|                                                                    | " 27 "                                        | - | - | - | 3.009  |
|                                                                    | " 30 "                                        | - | - | - | 3.007  |
|                                                                    | " 9 from muzzle                               | - | - | - | 3.007  |
|                                                                    | " 2 "                                         | - | - | - | 3.002  |
|                                                                    | Diameter of bottom of grooves in shot chamber | - | - | - | 3.087  |
|                                                                    | " at 15" or 1½" in front                      | - | - | - | 3.118  |
|                                                                    | " at muzzle                                   | - | - | - | 3.084  |

This enlargement was noticed after firing the 208 rounds rapid firing 19/4/64, but was not reported, as it was considered to be the construction of the gun, from the fact of the shot chamber not having altered in the least, and the enlargement of the bore being so immediately in front of it, but this has increased slightly since.

##### No. 52, E.O.C. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

Fissure in front of vent slightly increased in depth, but not in length. The scoring by escape of gas has also slightly increased both in the bore and grooves; the greatest depth of the scoring in the bore is about .07 of an inch, and in the grooves as follows:—

|                                           |               |   |   |           |
|-------------------------------------------|---------------|---|---|-----------|
| Position of groove at breech end of bore. | Up            | - | - | about .08 |
|                                           | Right of down | - | - | .1        |
|                                           | Left of down  | - | - | .12       |

Bearing side of edges of grooves slightly worn at seat of shot.

##### No. 264, WHITWORTH MUZZLE-LOADING RIFLE GUN.

Fissures in front of vent slightly increased in length and in depth. There are also a number of fine sharp fissures and slight scoring extending from front of vent to 9½ inches in the same groove; these have appeared since the last examination. The scoring by escape of gas from 7 to 11 inches right of up, and the wearing on the bearing side of the groove have also slightly increased.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

#### REPORT of EXAMINATION of Armstrong and Whitworth Experimental Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 18th, 20th, and 21st June 1864.

##### No. 38 A, E.O.C. 12-pr. ARMSTRONG BREECH-LOADING RIFLE GUN.

Slight fissures in powder chamber .2 of an inch long from edge of copper ring right of down; this has been developed since the last examination. In other respects the gun is in the same condition as reported June 11th, 1864.

##### No. 52 A, E.O.C. 12pr. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

Scoring by escape of gas slightly increased both in bore and grooves. Dimensions in bore and fissure in front of vent as reported June 11th, 1864.

##### No. 264 A, WHITWORTH 12-pr. MUZZLE-LOADING RIFLE GUN.

Fissures and scoring very slightly increased; in other respects the gun is in the same condition as reported June 11th, 1864.

##### No. 53 B, E.O.C. 12-pr. ARMSTRONG BREECH-LOADING RIFLE GUN.

Shot chamber expanded .002 of an inch; bore expanded at 14½ inches from slot hole, or immediately in front of shot chamber, .015 of an inch. The bore is also deeply dented and scored all round by bursting of shell from 51 to 58½ inches from muzzle, and slightly from 10 to 10½ Lt., 11½ to 11½ R. of up, 13½ to 14 Lt., 14½ to 19½ L. of D., 18 to 19 up, 18½ to 19½ R. of up, 19½ to 21 L. of up, 21 to 22 R. of

D.,  $21\frac{1}{2}$  to  $24\frac{1}{2}$  L. of D., 22 to  $24\frac{1}{2}$  L. of up, 23 to 28 R. of up,  $25\frac{1}{2}$  to 26 R. of D.,  $25\frac{1}{2}$  to  $28\frac{1}{2}$  L. of up to up,  $25\frac{1}{2}$  to  $26\frac{1}{2}$  D.,  $26\frac{1}{2}$  to  $27\frac{1}{2}$  L.,  $27\frac{1}{2}$  to  $29\frac{1}{2}$  L. of up,  $28\frac{1}{2}$  to  $29\frac{1}{2}$  Lt.,  $28\frac{1}{2}$  to  $29\frac{1}{2}$  Rt.,  $29\frac{1}{2}$  to 31 L. of up, 30 to 31 D.,  $30\frac{1}{2}$  to  $32\frac{1}{2}$  R. of up,  $30\frac{1}{2}$  to  $31\frac{1}{2}$  up, 32 to 38 Lt. and L. of up, 33 to 34 D., 33 to  $35\frac{1}{2}$  R. of up,  $33\frac{1}{2}$  to  $34\frac{1}{2}$  L. of up,  $34\frac{1}{2}$  to 36 R. of D.,  $34\frac{1}{2}$  to 38 L. of up, 37 to  $40\frac{1}{2}$  R. to R. of D.,  $38\frac{1}{2}$  to 43 L. of up,  $40\frac{1}{2}$  to  $41\frac{1}{2}$  L. of up,  $41\frac{1}{2}$  to  $43\frac{1}{2}$  L. of D., 42 to 48 R. to R. of D.,  $43\frac{1}{2}$  D., 44 to  $47\frac{1}{2}$  R. of D.,  $46\frac{1}{2}$  to  $47\frac{1}{2}$  L. of D., 48 to  $49\frac{1}{2}$  L. of D., 48 to  $50\frac{1}{2}$  R. of up to R. of D.,  $49\frac{1}{2}$  to  $50\frac{1}{2}$  L. of D.

No. 51B, E.O.C. 12-pr. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

Bore expanded at 8 inches from bottom of bore .003. Slight fissure in front of vent .2 of an inch long from edge of copper bouche. Bore dented and scored by bursting of shell from  $1\frac{1}{2}$  to  $3\frac{1}{2}$  Rt. in groove from  $6\frac{1}{2}$  to  $7\frac{1}{2}$  R. of D., 8 to 9 R. and R. of D.,  $10\frac{1}{2}$  to  $11\frac{1}{2}$  R. of up,  $10\frac{1}{2}$  to  $13\frac{1}{2}$  up in groove,  $14\frac{1}{2}$  to 15 R. and R. of D.,  $14\frac{1}{2}$  to  $15\frac{1}{2}$  R. of up,  $15\frac{1}{2}$  to  $17\frac{1}{2}$  R.,  $16\frac{1}{2}$  to  $18\frac{1}{2}$  R. of D. in groove, 17 to 18 R. of D., 20 to 21 R.,  $21\frac{1}{2}$  to  $23\frac{1}{2}$  R. of D.,  $28\frac{1}{2}$  to  $29\frac{1}{2}$  R. of up on edge of groove, 31 to  $31\frac{1}{2}$  L. of D.,  $32\frac{1}{2}$  to 33 L. of D.,  $33\frac{1}{2}$  to 35 L. of up on edge of groove, 36 to 37 D.,  $36\frac{1}{2}$  to 38 L.,  $37\frac{1}{2}$  to  $38\frac{1}{2}$  R. of up,  $42\frac{1}{2}$  L. of D.,  $44\frac{1}{2}$  to  $46\frac{1}{2}$  L. of up on edge of groove, and from  $46\frac{1}{2}$  to  $49\frac{1}{2}$  all round.

No. 251B, 12-pr. WHITWORTH MUZZLE-LOADING RIFLE GUN.

Slight tool marks in bore from muzzle to 1" R. of up and L. of D., from 8 to  $10\frac{1}{2}$ , from 17 to  $19\frac{1}{2}$ , from  $26\frac{1}{2}$  to  $28\frac{1}{2}$ , from  $35\frac{1}{2}$  to  $37\frac{1}{2}$ , from  $44\frac{1}{2}$  to  $46\frac{1}{2}$ , and from  $53\frac{1}{2}$  to  $54\frac{1}{2}$  R. of up, from 8 to 10, from 17 to  $18\frac{1}{2}$ , from  $35\frac{1}{2}$  to  $37\frac{1}{2}$ , from  $44\frac{1}{2}$  to  $46\frac{1}{2}$ , and at 54 L. of D. These were all in the gun before proof.

Bore slightly marked by bursting of shell at  $50\frac{1}{2}$  "Right," "Down," and "Left," and at  $51\frac{1}{2}$  Rt.

RICH. K. FREETH, Major, R.A.,

Inspector of Ordnance.

23/6/64.

REPORT OF EXAMINATION of 12-pr. Armstrong and Whitworth Rifle Guns, for Armstrong and Whitworth Committee at Shoeburyness, from 4th to 9th July 1864.

No. 38A, E.O.C. ARMSTRONG BREECH-LOADING RIFLE GUN.

No. 52A, E.O.C. ARMSTRONG MUZZLE-LOADING RIFLE GUN.

No. 264A, WHITWORTH MUZZLE-LOADING RIFLE GUN.

There is no alteration in these guns, the examination will therefore be the same as reported 21st June 1864.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

No. 33, 12-pr. E.O.C. BREECH-LOADING RIFLE.

Proved at Elswick, 12th March 1863.

Received from Elswick, 16/10/63, without further proof.

No. 51, 12-pr. E.O.C. MUZZLE-LOADING SHUNT RIFLE.

Proved at Elswick, 30th April 1863.

Received from Elswick, 16/10/63, without further proof.

No. 52, 12-pr. E.O.C. MUZZLE-LOADING SHUNT RIFLE.

Proved at Elswick, 6th May 1863.

Received from Elswick, 16/10/63, without further proof.

No. 53, 12-pr. E.O.C. BREECH-LOADING RIFLE.

Proved at Elswick, 6th May 1863.

Received from Elswick, 16/10/63, without further proof.

No. 57, 12-pr. E.O.C. MUZZLE-LOADING SHUNT RIFLE.

Proved at Elswick, 9/5/63.

Received from Elswick, 16/10/63, without further proof.

No. 61, 12-pr. E.O.C. BREECH-LOADING RIFLE.

Proved at Elswick, 19/5/63.

Received from Elswick, 16/10/63, without further proof

No. 251, 12-pr. MUZZLE-LOADING WHITWORTH GUN.

Received from Mr. Whitworth, 29/10/63.

Proved at Woolwich, 4/1/63.

Returned to Mr. Whitworth for alteration, 13/11/63.

Received from Mr. Whitworth, 18/1/64.

No. 253, 12-pr. MUZZLE-LOADING WHITWORTH GUN.

Received from Mr. Whitworth, 15/10/63.

Proved at Woolwich, 4/1/63.

Returned to Mr. Whitworth for alteration, 13/11/63.

Received from Mr. Whitworth, 18/3/64.

No. 264, 12-pr. MUZZLE-LOADING WHITWORTH GUN.

Received from Mr. Whitworth, 15/10/63.

Proved at Woolwich, 4/1/63.

Returned to Mr. Whitworth for alteration, 13/11/63.

Received from Mr. Whitworth, 18/3/64.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

14/7/64.

12-pr., No. 264A, WHITWORTH MUZZLE-LOADING RIFLE GUN.

There does not appear to be any increase either in the scoring or expansion in this gun since last examination, 5/7/64. The total amount of expansion in the bore since the commencement of the firing is as follows:—

|                                |   |   |      |
|--------------------------------|---|---|------|
| At bottom of bore              | - | - | .002 |
| " 3 inches from bottom of bore | - | - | .003 |
| " 6 "                          | " | " | .003 |
| " 9 "                          | " | " | .004 |
| " 12 "                         | " | " | .004 |
| " 15 "                         | " | " | .004 |
| " 18 "                         | " | " | .002 |
| " 21 "                         | " | " | .002 |
| " 24 "                         | " | " | .001 |

12-pr., No. 52A, E.O.C. MUZZLE-LOADING SHUNT GUN.

The scoring in bore and grooves slightly increased in depth.

The wear on the driving side of grooves also slightly increased.

Fissure in front of vent not increased.

The total amount of expansion in the bore since the commencement of the experiment is as follows:—

|                                 |   |   |      |
|---------------------------------|---|---|------|
| At 6 inches from bottom of bore | - | - | .001 |
| " 7 "                           | " | " | .003 |
| " 8 "                           | " | " | .003 |
| " 9 "                           | " | " | .002 |

12-pr., No. 38A, E.O.C. BREECH-LOADING RIFLE GUN.

Slight fissures in powder chamber starting from point of copper ring increased to .3 of an inch; in other respects the gun is in the same condition as 11/6/64.

12-pr., No. 251B, WHITWORTH MUZZLE-LOADING RIFLE GUN.

This gun is precisely in the same condition as reported 21/6/64.

12-pr., No. 51B, E.O.C. MUZZLE-LOADING SHUNT GUN.

Slight scoring in grooves extending about 9 inches from end of rifling, and in bore from  $10\frac{1}{2}$  to 14 inches Right of up.

Fissure in front of vent .2 long not increased.

Denting and scoring from bursting of shell as before.

12-pr., No. 53B, E.O.C. BREECH-LOADING RIFLE GUN.

Defects in bore from bursting of shell as before.

Powder and shot chamber slightly expanded as follows:—

|                  |                                     |   |      |
|------------------|-------------------------------------|---|------|
| Powder chamber   | At $1\frac{1}{4}$ " from breech end | - | .001 |
|                  | " 3 "                               | - | .006 |
|                  | " 4 "                               | - | .002 |
|                  | " 8 "                               | - | .004 |
| Shot chamber     | Muzzle end                          | - | .002 |
|                  | Breech end                          | - | .002 |
| Bore expanded at | $14\frac{1}{2}$ from slot hole      | - | .020 |

C. M. MALONY, Lieutenant R.A.,  
For Inspector of Ordnance.

23/9/64.

REPORT OF EXAMINATION of Six 12-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 8th to 14th December 1864.

No. 38A, E.O.C. BREECH-LOADING RIFLE GUN, (12-pr.)

Slight fissure in P.C. from 1.95 to 2.5 R. of D.; in other respects the flaws and dimensions are the same as reported 11/6/64 and 19/9/64.

No. 52A, E.O.C. MUZZLE-LOADING SHUNT RIFLE GUN, (12-pr.)

The scoring in bore and grooves has slightly increased.

The dimensions the same as reported 19/9/64.

No. 264A, WHITWORTH MUZZLE-LOADING RIFLE GUN, (12-pr.)

The same as reported 19/9/64.

A considerable deposit of powder and flannel cartridge in end of bore.

No. 53B, E.O.C. BREECH-LOADING RIFLE GUN, (12-pr.)

No alteration in dents and scores.

The shot chamber has expanded .001, and the bore at  $14\frac{1}{2}$  from slot hole .002 of an inch. The joint of copper ring has opened, and the copper slightly expanded.

No. 51b, E.O.C. MUZZLE-LOADING SHUNT RIFLE GUN,  
(12-pr.)

Slight fissure in bore from 6·2 to 6·7 R., and from 15 to 15·75 R. of up.

The scoring in the grooves has slightly increased, and is from 8 to 15 in. nearly all round.

The fissure in front of vent not altered.

No. 251b, WHITWORTH MUZZLE-LOADING RIFLE-GUN,  
(12-pr.)

The bore has expanded at 12" from bottom ·001

" " 13 " ·001

" " 15 " ·002

" " 18 " ·001

The marks and dents are in the same condition as reported 21/6/64.

REPORT OF EXAMINATION OF 12-pr. Competitive Rifle Guns for Armstrong and Whitworth Committee on return from Shoeburyness, after firing 2,800 rounds, 21st February 1865.

12-pr. No. 38A, E.O.C. BREECH-LOADING ARMSTRONG GUN.

Slight fissures in powder chamber from 1·95 to 2·5, from 3·25 to 4·2, and from edge of copper ring to ·3 of an inch, R. of D. from 2·5 to 3·7, Left from 3·2 to 4·2, and from 2·1 to 2·9, R. of up.

Breech-piece considerably scored in slot hole by escape of gas, round vent-piece.

Bore and shot chamber expanded, the dimensions and enlargement being as follows:—

|                             |                      |       | Enlargement during Experiment. |
|-----------------------------|----------------------|-------|--------------------------------|
| Diameter in powder chamber. | At 1½ from vent seat | 3·204 | Nil.                           |

12-pr. No. 52A, E.O.C., MUZZLE-LOADING SHUNT RIFLE GUN.

Bore and grooves very much scored by escape of gas, the scoring in bore extending from 8 to 17 inches all round, and in the grooves from 7½ to 19 inches from bottom of bore. The depth in grooves being about ·2 of an inch.

The deepest part of the scoring in the bore is from "R. of up" to "L. of up," and in the grooves "R. of D." and "L. of D." at breech end of bore, slight amount of wear on bearing or driving side of grooves.

Slight fissures in front of vent, ·3 of an inch in length, there is also a slight amount of wear round the edge of copper bouch, extending nearly ·1 of an inch in depth, diameter of vents top ·22, bottom ·3 of an inch.

Very slight amount of expansion in bore, the dimensions and enlargement being as follows:—

|                   |                 |       | Enlargement during Experiment. |
|-------------------|-----------------|-------|--------------------------------|
| Diameter of bore. | At bottom       | 2·99  | Nil.                           |
|                   | " 1 from bottom | 2·99  | Nil.                           |
|                   | " 2 "           | 2·991 | Nil.                           |
|                   | " 3 "           | 2·996 | Nil.                           |
|                   | " 4 "           | 2·997 | Nil.                           |

|                   | " 7 "           | 3·001 | ·003                           |
|                   | " 8 "           | 3·002 | ·003                           |
|                   | " 9 "           | 3·001 | ·001                           |
| Diameter of bore. | " Muzzle        | 3·02  | Nil.                           |

12-pr. No. 264A, WHITWORTH MUZZLE-LOADING RIFLE GUN.

Bore slightly scored by escape of gas from front of vent, extending to 15 inches from bottom of bore "R. of up" to "L. of up."

Slight fissures in front of vent, extending to 2·5 inches in length; slight opening round cone of vent, the deepest part being in the rear, at which part the impression shows the defect to be about ·1 of an inch in depth.

Slight amount of wear on bearing side of rifling, extending from 13 to 45 inches from bottom of bore.

There is also a slight amount of expansion in the bore, the dimensions and enlargement being as follows:—

|                   |                       |       | Enlargement during Experiment. |
|-------------------|-----------------------|-------|--------------------------------|
| Diameter in bore. | At bottom of bore     | 3·025 | ·005                           |

12-pr. No. 53B, E.O.C. BREECH-LOADING ARMSTRONG RIFLE GUN.

Exterior.

Blow from shot at 40 inches from muzzle, Rt.; this has cut a piece out of the 3 C. coil 2·75 × 3 inches, and has also cracked the coil longitudinally 2·75 inches from edge; there is also a slight blow from shot on 3 "C" coil at 14 inches "L. of up". The blow at 40 inches "Rt." has expanded the 3 "C" coil, causing an opening between the coil and "A" tube extending nearly all round, the widest part being ·7 of an inch R. of D. The "A" tube is also dented about ·1 of an inch in depth, causing a corresponding bulge in the bore.

Interior.

The dents and scores in bore by bursting of shell from muzzle to shot chamber as in former report. There is a slight flaw in bore in centre of bulge at 40 inches "Rt."

Bore and chamber slightly expanded, the present dimensions and enlargement being as follows:—

|                                            |                      |       | Enlargement during Experiment. |

| Diameter at 40½ from muzzle and under dent |                      |       | 2·95 bulge                     |
|                                            |                      |       | Contraction of Bore. ·057      |

Edge of groove for keep pin in breech screw is slightly burred up.

After firing three rounds at proof butt 10/2/65, no alteration was found in any of the defects.

The delay caused by fitting of lever at proof butt on the 10th February was caused by a wrong lever being sent to the butt with the gun. The lever used did not belong to either of the experimental guns, but was a spare one from the President of Ordnance Department.

12-pr. No. 51b E.O.C. MUZZLE-LOADING SHUNT GUN.

Exterior.

Blows from shot on chase at 9½ inches from muzzle "R. of up," the deepest part of dent being about ·05 of an inch, causing a corresponding bulge in the bore; and at 25½ "R," the deepest part being about ·04 of an inch, also causing a bulge in the bore. Shoulder of right trunnion grazed "R. of up" and "R. of D." and also on face of trunnion and slight grazes on trunnion hoop, at 41½ "R. and 41·9 L."; trunnion sight broken off.

Interior.

Slight scoring by gas, in grooves, extending from 8 to 17 inches from bottom of bore, and in lands from 10½ to

14 "R. of up." Slight fissures in front of vent '2 of an inch in length and in bore from 6'2 to 6'7 of an inch right, and from 15 to 15'75 "R. of up."

Slight amount of expansion in bore, the dimensions and enlargement being as follows :—

|                   |                                   |   |             | Enlargement during Experiment. |

|                   | 18                                | " | 3'002       | - '002                         |
|                   | 21                                | " | 3'001       | - '001                         |
|                   |                                   |   |             | Contraction of Bore.           |
| Diameter in bore. | At 9" from muzzle and under dent  | - | 2'961 bulge | '039                           |
|                   | At 25" from muzzle and under dent | - | 2'963 "     | '037                           |

Diameter of vent, top '23, bottom '4 of an inch.  
The bulging in bore is sufficient to prevent the shot in which the studs are, of the full dimensions, from passing down without using force.

After firing three rounds at proof butt 10/2/65, no alteration was found in any of the defects.

12-pr. No. 251B, WHITWORTH MUZZLE-LOADING RIFLE GUN.

Exterior.

Slight dents on chase at 25½ inches "up" and 26½ "R. of D.," about '02 of an inch deep.

Trunnion hoop off gun.  
Left trunnion broken out of hoop; the hoop is also split in two places, in the interior "R. of D." and "R. of up."

Interior.

Slight scoring in bore, extending 3 inches from front of vent, and slight fissure in front of vent '5 of an inch in length. There was also a considerable opening round the cone of copper bouch, the gutta-percha penetrating about '5 of an inch all round the cone, and on removing one of the impressions, the lower part of the vent was brought out with it. This shows there has been a considerable escape of gas, as the copper is very much corroded round the cone and on one side of the stem.

There is also a slight expansion in the bore, the dimensions and enlargement being as follows :—

|                   |                       |   |       | Enlargement during Experiment. |

7th April, 1865.

R. K. FREETH, Major R.A.,  
Inspector of Ordnance.

Office of Inspector of Ordnance, Royal Arsenal,  
Woolwich, 4th April 1865.

REPORT on testing THREE 12-pr. COMPETITIVE GUNS, viz.,  
Sir W. ARMSTRONG's breech-loading and shunt muzzle-loading gun, and Mr. Whitworth's hexagonal bore rifled gun.

The experiment was conducted on the 23rd, 24th, 27th, and 28th March, in the presence of members of the Committee.

RESULTS.

| 8       | 48            | 6                                 | 6                       | 2             | —         | —              | —         |                                  |

The three guns were tested in the same manner, except the breech-loading Armstrong, when the iron wedge of the six series was omitted.

The trunnion ring of breech-loading Armstrong gun was cracked in the seventh round of the fifth series (the 33rd of the experiment), at the fourth round of the seventh series, and 42nd of the experiment, the opening of the trunnion ring extended about an inch; the A tube underneath was also cracked, rendering the discontinuance of the experiment necessary.

The A tube of Armstrong muzzle-loading shunt gun was cracked in the 16th round of the eighth series, the C coil being found torn open, and lying near to the gun as if it had simply fallen off.

At the 48th round of the eighth series the Whitworth gun burst violently into 11 pieces, the fore part of the gun was thrown forward on the butt, the breech blown to the rear, and other parts dispersed through the cell, one part lodging in the timber work. The fracture of gun passed through the vent in a direct line towards the muzzle, and not in the direction of the rifling, as seen in cast-iron guns rifled on the same principle.

RICHD. K. FREETH, Major R.A.,  
Inspector of Ordnance.

Secretary, Armstrong and Whitworth  
Committee.

REPORT of EXAMINATION of No. 55, E.O.C. 70-pr. breech-loading gun, for Armstrong and Whitworth Committee at Shoeburyness, March 22, 1865.

"Exterior."—"B" tube split longitudinally "L. of up" commencing at 29½ from muzzle, extending to, and apparently passing under, the front end of "C" coil. The fracture is about .05 of an inch in width, 1.25 inches in depth, and from the commencement to "C" coil is 11 inches in length.

"Interior."—The bore has expanded under the fracture in the "B" tube, but there is no appearance of any cracks in the barrel; the expansion extends from 27 to 54 inches; the greatest amount being .023 of an inch at 39 inches from the muzzle. The bore is also very much leaded from the muzzle to 60 inches, the grooves being in some places nearly half filled up.

Diameter of vent:—

Through .25 of an inch,  
Bottom '6 "

RICH. K. FREETH, Major.  
Inspector of Ordnance.

July 1, 1865.

REPORT of EXPERIMENTAL PRACTICE carried on at the Proof Butt with a muzzle-loading shunt rifled gun, No. 59, in accordance with programme received from the Armstrong and Whitworth Committee, dated 30th March, 1865.

| Dates of Firing.           | No. of Rounds. | Charge. |         | Projectiles.          |         |          |     |
|----------------------------|----------------|---------|---------|-----------------------|---------|----------|-----|
|                            |                | Length. | Weight. | Nature.               | Length. | Weight.  | No. |
| 1865.                      |                | in.     | lbs.    |                       | in.     | lbs. oz. |     |
| 21, 23, 25, 26, 27 April - | 800            | 12.1    | 10      | Hollow head- ed shot. | 12.6    | 71 0     | 695 |
| 1, 3, 4, 5, and 6 May -    |                |         |         | Segment shell.        | 13.1    | 64 6     | 50  |
|                            |                |         |         | Common shell.         | 14.6    | 65 0     | 55  |

The gun had previously fired 2,200 rounds at Shoeburyness, and had an extensive crack 19 inches long extending from the bottom of the bore towards the muzzle through the vent parallel with the axis of the gun.

The vent was of true size at the beginning of the experiment, but an obstruction at 5½ inches from the top prevented the gauge .22 from passing through; at 175th round gauge .22 passed into the bore; at 525th round .23 gauge entered, but at the 662nd round the vent had partially closed, preventing gauge .22 from passing further down than 4.6 inches from the surface, and so continued to end of the experiment.

Lubricators were taken into use at the 242nd round, and continued during the experiment.

The projectiles used had been previously fired at Shoeburyness.

Fifty segment shells were fired which broke up on entering the butt; the fragments scattering about became dangerous, they were therefore discontinued.

Examination after firing.—The crack in "A" tube has slightly increased in length it now extending from bottom of bore to 20 inches "up."

The fissuring and scoring in the grooves and bore has also considerably increased both in length and depth, and the driving edges of the grooves are also very much worn.

The centre of the vent was partially closed at the end of the experiment, but the top and bottom was considerably enlarged; the edge of the copper bouche was very much worn away.

The amount of expansion in bore is as follows:—

|                   | Vertical. | Horizontal. |
|-------------------|-----------|-------------|
| At 3° from bottom | .002      | .002        |
| 6 "               | .003      | .005        |
| 9 "               | .001      | .001        |
| 12 "              | .002      | .002        |
| 15 "              | .001      | .001        |
| 18 "              | .004      | .004        |
| 21 "              | .012      | .010        |
| 22 "              | .008      | .060 Dent.  |
| 27 "              | .007      | .002        |
| 30 "              | .015      | .045 Dent.  |
| 33 "              | .013      | .023        |
| 36 "              | .001      | .005        |

Impressions taken before and after the experiment are forwarded herewith.

|                                                      |                | Length. | Weight. | Nature.               | Length. | Weight.  | No. |
| 1865.                                                |                | in.     | lb.     |                       | in.     | lbs. oz. |     |
| 18 and 19 April.                                     | 1400           | 12      | 9       | Solid shot.           | 11.56   | 78 8     | 674 |
| 8, 10, 11, 12, 13, 15, 17, 23, 27, 29, 30, 31, May - |                |         |         | Hollow head- ed shot. | 12.2    | 71 0     | 525 |
|                                                      |                |         |         | Common shell.         | 14.6    | 63 11    | 201 |

The gun had previously fired 1,600 rounds at Shoeburyness, was cracked to the extent of 11 inches in the "B" tube, had a slight flaw in breech bouche, and corresponding one in breech stopper.

*Vent.*—Before testing the vent, gauge '24 passed through, was enlarged at the 25th round to '25, at 50th round '24 only would enter; at the 200th round an obstruction to the vent gauge '24 at 5½ inches, but '23 passed through; at 340th round '23 gauge was stopped at the same place, '22 passing the obstruction; at 400th round '22 was also stopped, but the prickler passed freely; at 536th round the obstruction in vent shifted to 4¾ inches from top; at 860th to 4 inches, and at 1,240 round to 2 inches, and continued so to end of experiment.

In consequence of the defective state of the vent a great many misfires took place (at least 16 per cent.) thus delaying the experiment considerably.

*Breech bouche.*—At 200th round the defect in breech bouche was much increased, and a considerable escape of gas ensued; at 201st round a piece of rag placed in the slot of gun was set on fire, the bouche was considered unserviceable.

The gun was then fitted with a new bouche, which remained good until the 536th round when the escape of gas was great, this bouche after firing 335 rounds was considered unserviceable.

At the 537th round the gun was fitted with a new bouche which lasted the remainder of the experiment. The removal of the old bouche and replacing the new one took an artisan and gunner five hours.

*Breech stopper.*—At 201st round escape of gas considerable, the defect was repaired by the insertion of a new piece of metal; after 536th round the stopper was replaced by a new one, which finished the experiment.

*Locking pin and slide.*—After the 200th round the slide for locking pin was broken, the gun was fitted with a new slide and cover, this remained good for the remainder of the experiment.

The crack in "B" tube underwent no perceptible change in the course of firing.

*Firing after 650 rounds.*—To hasten the testing of this gun it was removed from the busting cell to the open platforms, was changed in position after every 100 rounds, and the gun thoroughly washed out, and locking pin and slide cleaned.

The breech stopper was cleaned after every 10th round.

*Examination after firing.*

Scoring at junction of powder and shot chamber slightly increased.

The denting in the bore and the expansion under crack in chase has not increased.

The powder chamber has expanded .005 of an inch, but there is no alteration in the shot chamber.

The exterior crack in "B" tube has not increased. The centre of the vent was partially closed at the end of the experiment, but the top and bottom were very much enlarged.

Breech ring and stopper, no defects.

Impressions taken before and after the experiment are forwarded herewith.

RICH. K. FREETH, Major, R.A.,  
Inspector of Ordnance.

1/7/65.

Office of Inspector of Ordnance.

REPORT OF EXPERIMENTAL PRACTICE carried on at the Proof Butt, with 70-pr. Whitworth muzzle-loading rifle gun, No. 276, for Armstrong and Whitworth Committee in accordance with Programme, dated 12th May, 1865.

| Dates of Firing.        | No. of Rounds. | Charge. |         | Projectiles. |         |             |
|-------------------------|----------------|---------|---------|--------------|---------|-------------|
|                         |                | Length. | Weight. | Nature.      | Length. | Weight.     |
| 30 and 31 May.          | 998            | 14½     | 10      | Solid shot.  | in. 15  | lbs. 70 943 |
| 2, 5, 8, 9 and 10 June. |                |         |         | Common shell | 20½     | 70 55       |

No. of rounds previously fired at Shoeburyness, 2002.

*Vent.*—Before the commencement of the experiment the '22-inch gauge passed up the vent as far as the platina plug (viz.) 12½ inches from entrance. After firing 209 rounds it was considered necessary to renew the vent. An attempt was made by Mr. Whitworth's artificer to unscrew the unserviceable one, but failed as it could only be partially removed; it was then determined to remove the copper lining of the vent, but as this could not be effectually removed, a service round was fired from the muzzle for the purpose of trying to blow the copper out, but this also failed; it was ultimately drilled out after much labour, and a new copper fitted.

After firing 311 rounds the '22-inch gauge passed through the vent and platina plug. At the 380th round the vent was rimed out before the '22-inch gauge could pass into the bore, but at the 511th round it passed only to the platina plug. At the 710th round the '22-inch gauge stopped at 7 inches; at the 885th at 4 inches, and at the 954th at 6½ inches from entrance.

The vent was rimed out after the 956th round, and the '22-inch gauge passed into the bore, and continued to do so to the end of the experiment. The vent was rimed out after the 380th, 390th, 410th, 460th, 510th, 560th, 610th, 660th, 710th, 760th, 810th, 885th, and 956th rounds. The vent fouled very much throughout the experiment, which necessitated the frequent riming.

The prickler passed through the vent independently of the riming until the 956th round, when it was stopped at the platina plug.

*Plug in upper or original vent.*—At the 510th round copper plug in old vent projected into the bore, and in some degree impeded the loading; a new plug was fitted at the 511th round, this required setting up at the 760th round, and dropped at the 935th, which rendered loading so difficult, that after the 954th round it was removed and a new one fitted.

*Breech plug.*—At the 510th round the cascade or breech plug shifted ⅓ of an inch (circumferentially), and again ⅓ of an inch at 760th round. A slight crack was also observed in the breech at this time .775 of an inch long, but it did not increase with the after firing.

*Examination after firing.*

*Fissures in powder space.*—The fissures in the powder space of bore have considerably increased both in length and depth, they now extending from bottom of bore to 48 inches in length, and in each groove or angle of the rifling. The deepest of these fissures is "up," and the impression shows a depth of about .2 of an inch.

*Scoring.*—The bore is also very much scored by the gas all round, and extending in length from bottom of bore to 48 inches.

*Wear in grooves.*—The impressions show a considerable amount of wear on the driving side of rifling in each groove, extending from 19 to 38 inches from bottom of bore.

*Copper cup in end of bore.*—The copper cup in bottom of bore is very much crushed and distorted in shape, the centre or portion round the vent bouche apparently curling forward, while the part at .75 of an inch from the edge of the cup is crushed back about .3 of an inch.

*Breech plug, &c.*—The breech plug has shifted round 1.1 inches, which causes it to project about .02 of an inch, and there is also a slight crack or defect under sight ring on the right side from muzzle .75 of an inch in length.

The expansion in bore after firing at proof butt, and total expansion, is as follows:—

| Distance from bottom of Bore. | Expansion while firing at Proof Butt. | Total Amount of Expansion. | Distance from bottom of Bore. | Expansion while firing at Proof Butt. | Total Amount of Expansion. |
|-------------------------------|---------------------------------------|----------------------------|-------------------------------|---------------------------------------|----------------------------|
| in. 1                         | .025                                  | .026                       | in. 21                        | .037                                  | .040                       |
| 2                             | .020                                  | .021                       | 22                            | .022                                  | .040                       |

| Total            | 102            | —       | —                              | —      | —           | —                             | —       | 102            | —       |                                                                      |

A defect in the breech bouche, and a corresponding one in the stopper, was observed during the last 5 rounds of the first day's firing (the 60th of the experiment). After the 65th round a new breech bouche was fitted which lasted to the end of the experiment.

Slight crack in powder chamber from 6<sup>1</sup>/<sub>4</sub> to 6<sup>3</sup>/<sub>4</sub> inches "L of up," this has been developed during the recent firing.

The scoring at the junction of powder and shot chamber has slightly increased. Exterior crack in "B" tube not increased.

The bore in front of shot chamber has slightly expanded, the amount being as follows :—

| Distance from end of Bore.                   | Amount of Expansion.  |        |
|----------------------------------------------|-----------------------|--------|
|                                              | During recent firing. | Total. |

Impressions of the defects taken after firing are forwarded herewith.

RICH. K. FREETH, Major,  
Inspector of Ordnance.

Office of Inspector of Ordnance, 13th July 1865.

SECOND REPORT of EXPERIMENTAL PRACTICE with a 70-pr. Competitive Muzzle-loading Rifled Whitworth Gun (Expl. No. 267), carried out by the Inspector of Ordnance Department for the Armstrong and Whitworth Committee, who were present and directed the order of firing.

The gun had previously fired 3,000 rounds as follows :—

At Shoeburyness - - - 2,002  
„ Woolwich - - - 998

| Total            | 102            | —       | —       | —      | —           | —                              | —       | 102            | —                                 |                                               |

At the 73rd round the chase shifted forward ·08 of an inch, at 76th round it had increased to ·1", at the 82nd to 17", and at close of experiment to ·22 inch. After the firing two cracks were observed in the hoop in rear of the trunnion ring, extending towards the muzzle 10·5 inches in length, slightly angular in position and about 7·5 inches apart.

After 30 rounds were fired the bore was washed out for the purpose of taking an impression; on resuming the firing 9 mis-fires took place, probably from water getting into the vent. The gun was ultimately discharged by passing a piece of quick match through the vent and firing it. The fissuring and scoring in the bore has considerably increased both in length and depth, it now extending from

bottom of bore to 56 inches in length, in each angle of the rifling the deepest of the fissures being "up," the impression showing a depth of about  $\cdot 3$  of an inch.

The copper cup in bottom of bore is very much distorted in shape; the centre part of the cup is apparently curled forward so much that the rear part projects in front of the end of vent bouche about  $\cdot 1$  of an inch, but at  $\cdot 75$  of an inch from the exterior edge the copper is crushed back about  $\cdot 35$  of an inch, or apparently through the cup in one place. The end of the bouche is also forced back about  $\cdot 25$  of an inch.

The chase and "A" tube has shifted forward from under the hoop, in front of trunnions  $\cdot 2$  of an inch; but whether this is due to elongation of the "A" tube from the large amount of expansion in the bore, or from fracture in rear of the cup, cannot be ascertained without the removal of the breech plug, but there is no apparent fracture in the tube itself.

The hoop in rear of trunnions has split through longitudinally, the whole length of the hoop, in two places "Right of Down" this fracture is over the largest amount of expansion in the bore.

The amount of expansion in the bore during the last firing, and the total amount, is as follows:—

| Distance from Bottom of Bore. | Amount of Expansion. |             |
|-------------------------------|----------------------|-------------|
|                               | During last firing.  | Total.      |

Impressions of the defects taken after firing are forwarded herewith.

RICH. K. FREETH, Major,  
Inspector of Ordnance.

Office of Inspector of Ordnance, 13th July 1865.

SECOND REPORT of EXPERIMENTAL PRACTICE with a 70-pr. muzzle-loading rifled shunt competitive Armstrong gun (Experimental No. 59), carried out by the Inspector of Ordnance Department for the Armstrong and Whitworth Committee, who were present, and directed the order of firing.

The gun had previously fired 3,000 rounds as follows:—

At Shoeburyness - - - 1,600  
At Woolwich - - - 1,400

| Dates of Firing. | No. of Rounds. | Charge.      |         | Space. | Projectile. |                 |                  |                | Recoil. | Vent.                                                            |

After firing 65 rounds the gun was fitted with a new vent.

The top coil shifted about  $\cdot 01$  of an inch at the 87th round.

The "A" tube of this gun is split longitudinally in four places, viz.: from bottom of bore to 21 inches "up;" from 11 to 35 inches "R. of up" (this fracture runs along the loading side of the groove from 11 to 28 inches, at which point it crosses the groove and extends to 35 inches on the driving side); from 11 $\frac{1}{2}$  to 36 inches in loading side of groove "L. of up," and from 2 to 27 inches on loading side of groove "down." There are two slight cracks or fissures, one from 8 $\frac{1}{2}$  to 9 $\frac{1}{2}$  inches "left," the other from 3 $\cdot$ 9 to 4 $\cdot$ 5 inches "L. of up" from bottom of bore.

There are also apparently two slight cracks at 26 inches from bottom of bore running in a transverse direction to the axis of the bore, and extending from "R. of up" to "L. of up."

The scoring in the bore has slightly increased. There is a slight defect in the centre of bottom of bore about  $\cdot 05$  of an inch in depth.

The gun has been re-vented previously to the commencement of this series of the experiment; vent true.

The point in rear of trunnion hoop is opened about  $\cdot 01$  of an inch.

The bore is slightly expanded. The amount during recent firing and total amount is as follows:—

| Distance from Bottom of Bore. | Amount of Expansion.  |             |       |
|-------------------------------|-----------------------|-------------|-------|
|                               | During recent firing. | Total.      |       |

|----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fuzes, time, "Armstrong," Nos. from 1 to 30, packed as for service.              | Nos. 1, 4, 6, 11, 12, 14, 17, 19, 20, 22, 23, 24, 25, and 26, no apparent defects.<br>Nos. 2, 5, 7, 8, 9, 16, 21, 27, and 28, nuts worked loose and caps shifted.<br>Nos. 3, 10, 13, 15, 18, and 29, slight shake in pellet.<br>*No. 30 nut unscrewed about half way up the stem of the fuze. Priming shaken out of neck and out of cap, and paper scale partially defaced. | Nos. 1, 2, 4, 5, 6, 8, 9, 11, 16, 17, 21, 22, 24, 26, 27, and 28, no apparent defects.<br>Nos. 7, 14, 19, 20, and 30, nuts worked loose and caps shifted.<br>Nos. 3, 10, 12, 13, 15, 18, 23, 25, and 29, slight shake in pellet. | Nos. 1, 4, 5, 6, 7, 8, 9, 11, 14, 20, 21, 22, 24, 26, and 27; no apparent defects.<br>Nos. 2 and 30 nut worked loose and cap shifted.<br>Nos. 3, 10, 12, 13, 15, 18, 23, 25, 28, and 29 slight shake in pellet.<br>Nos. 16, 17, and 19, priming in neck partially shaken out. | On examination after opening, it was found that the slight shake in pellet, noticed in previous examination, was not caused by any defect in travelling, but was owing to a very slight amount of play between the pellet and the body of the fuze. The wires for suspending the pellet are not injured, but the needles were all found to be very much corroded, and in two cases (Nos. 6 and 23) the needles are very nearly eaten away. | *This fuze had been packed without waterproof paper bag, and with the tin box unbound.<br><br>The paper bags were in nearly all cases found to be cut by the edge of the cup.<br><br>These fuzes were all re-packed in paper bags, and the tin boxes re-bound at each examination. |
| Fuzes, time, "Boxer's" Nos. from 1 to 40, packed as for service.                 | Nos. 2, 3, 4, 5, 7, 8, 9, 10, 12, 13, 15 to 19, and 21 to 40, no apparent defects.<br>Nos. 1, 6, 11, 14, and 20, slight shake in pellet.                                                                                                                                                                                                                                    | Nos. 3, 4, 5, 7, 8, 10, 12, 13, 15 to 19, 21 to 33, and 35 to 40, no apparent defects.<br>Nos. 1, 2, 6, 9, 11, 14, 20, and 34, slight shake in pellet.                                                                           | No alteration                                                                                                                                                                                                                                                                 | On examination of these fuzes after opening, the shake was found to be on the side, the wires for suspending the pellets are not apparently damaged.                                                                                                                                                                                                                                                                                       | —                                                                                                                                                                                                                                                                                  |
| Fuzes, percussion, "Armstrong," Nos. from 1 to 30, packed as for service.        | Nos. 1 to 10, 12 to 28, and 30, no apparent defects.<br>Nos. 11 and 29 slight shake in pellet.                                                                                                                                                                                                                                                                              | Nos. 1, 2, 4, to 10, 12 to 28, and 30, no apparent defects.<br>Nos. 3, 11, and 29, slight shake in pellet.                                                                                                                       | No alteration                                                                                                                                                                                                                                                                 | On examination after opening, the shake noticed in previous examination was found to be side shake in guard ring, and not caused by travelling.                                                                                                                                                                                                                                                                                            | —                                                                                                                                                                                                                                                                                  |

MEMO.—The lubricators for the Whitworth guns, which were screwed on a brass plate and carried horizontally in the liner box, were uninjured. Those for the B.L. Armstrong guns were found to be "dummies," on opening the cartridges in which they are choked, but the cartridges are uninjured.

N.B.—Staple for carrying laboratory knives in lid of box containing B.L. shell broken.

Several of the fuze implements in box containing "Whitworth" shell, were found shaken out of their places on each examination. The bradawls, fuze-key, and drift, being generally out.

RICH. K. FREETH, Major R.A.  
Inspector of Ordnance.

SIR,

24th February 1865.

I HAVE the honour to inform the Armstrong and Whitworth Committee that I have carefully considered the question of the possibility of the ammunition referred to in your letter of the 20th December 1864, suffering deterioration by being kept in store for a long time in different climates, and I have to submit to the Committee the following observations with regard to the individual shells and fuzes included in the ammunition:—

1. There can be no question as to the permanent characters of the Armstrong M.L. shell and the Whitworth shell; the only precaution to be attended to in their preservation, in any climate, being the renewal of the lacquer as soon as it no longer effectively protects the external surfaces of the metal from rust.

2. I am also of opinion that the Armstrong B.L. shell, as now manufactured, will not be found susceptible of deterioration. The liability of the soft metal coating to separate from the body of the shell, in consequence of different effects of heat upon the two metals, and of the non-elastic nature of the soft metal, has been entirely overcome by soldering the metals together, through the agency of zinc. Instances have occurred in which a separation of the metals, in a few very small places, has been observed some time after the projectiles had been in store, a result which was traced to the accidental enclosure of minute quantities of saline matter between the metals, whereby a voltaic action was established. I believe that the possibility of this occasional trifling separation has been set aside in the manufacture of the projectiles in question; but even where it has occurred it has never been detrimental to the efficiency of the ammunition.

The superficial oxidation which the soft metal undergoes within a short period after the completion of the projectiles, affords the best possible protection against continued atmospheric action; it is only further essential to their proper preservation to protect the exposed iron portions by means of lacquer, and to extend the coating of the latter on to the soft metal to such an extent as to ensure the covering of the exposed points of juncture between the two metals.

3. The Armstrong time and percussion fuze, or, more strictly, that part which constitutes the time fuze, is unquestionably more susceptible of deterioration than any of the other descriptions of ammunition enumerated in your letter of the 20th December 1864. The fuze composition, though protected by means of a coating of paper and by the leather washer which is fixed into the cap, is still sufficiently accessible to moisture to render it very liable to serious deterioration by a protracted preservation of these fuzes in damp localities. The priming contained in the annular recess just below the nut, and also the priming pellet in the cap, are still more open to injury from damp than the fuze composition. After the exposure of a fuze of this description for one month to a moist atmosphere, the temperature of which ranged from 90° to 120° Fah., the priming compositions were found to have become so much injured as to burn with very great difficulty.

Another portion of this fuze which is likely to become injured by time, although it is excluded from the effects of atmospheric moisture, by enclosure within the body of the fuze, is the iron pin which serves to ignite the

detonator. The small quantity of priming which is fixed round the base of that pin, and in actual contact with it, cannot fail to corrode the iron, an oxidising action being established by the small quantity of moisture present originally and unavoidably in the composition. The pin of the fuze examined by me was much rusted, and the rust had penetrated to a considerable extent into the composition, interfering with its inflammability. Judging from the appearance of the pin and of the slight force requisite to break it (the thickness of the metal having been much reduced by corrosion), I consider it likely that these pins will frequently be corroded to such an extent as at any rate to destroy their points, and to deprive them of the power of perforating the detonators.

It is evident that these particular fuzes must be preserved in store in perfectly water-proof cases, but even this precaution will not prevent the deterioration of the igniting arrangement, consequent upon the contact of the iron pin with priming composition.\*

4. The construction of the Armstrong pillar fuze is, in my opinion perfectly calculated to ensure its permanent efficiency under all climatic conditions.

5. Boxer's wood fuze is naturally susceptible of alteration in its external dimensions, from the swelling or shrinking of the wood in very damp, or dry and warm situations. In one month's exposure of one of these fuzes to a warm moist atmosphere, the wood had swollen sufficiently to loosen the paper which bears the numbers, and is fastened over the holes provided for setting the fuze. This loosening, and possible detachment, of the index is the only inconvenience likely to result from the effects of climate upon the fuze, and may be overcome without difficulty. By the paper lining in the fuze, any slight changes which the wooden case may undergo for a time in its dimensions, are prevented from interfering with the efficiency of the fuze. The priming contained in the small perforations, and in the end of the fuze, appears to me to require more permanently efficient protection from the effects of moisture than that afforded by the thin painted paper coverings, which, as I have pointed out, are liable to become loosened. This could obviously also be accomplished readily; and I am of opinion that there would then be no part vital to the efficiency of this fuze, likely to suffer deterioration.

6. I consider that Boxer's metal fuzes are as little susceptible of deterioration by being kept in store in different climates, as Armstrong's pillar fuze. I have only to observe, with reference to them, that the small piece of paper or gut-skin, coated with shellac, which is fixed upon the perforation at the bottom of the fuze, cannot be nearly so efficient in permanently excluding moisture from having access to the interior of the fuze, as the thin plates of metal, employed for closing the perforations in the bases of the Armstrong fuzes referred to above.

In the foregoing observations I have included all points which appear to me possibly susceptible of interfering with the permanent efficiency of the ammunition received from the Committee.

The Secretary,  
Armstrong and Whitworth  
Committee.

I have, &c.  
F. A. ABEL,  
Chemist of the War  
Department.

\* These remarks refer equally to the time fuze when apart from the percussion fuze, but do not bear any reference to the latter, which does not appear to be in any way liable to deterioration.—F. A. A.

REPORT OF EXAMINATION OF EXPERIMENTAL FUZES, LUBRICATORS, 70-POUNDER SHELLS, &c., travelled for Twenty Days in a Flanders Wagon, by Principal Superintendent of Stores, for Armstrong and Whitworth Committee, and Examination after every Four Days by Inspector of Ordnance.

| Description of Stores.      | How packed.                                                                                                                                 | Examination.<br>13th October 1864.                                                                                                                                                                                                                                                                                   | Examination.<br>20th October 1864.                                                                                                                                                                                                                                                                | Examination.<br>27th October 1864.                                                                                                        | Examination.<br>3rd November 1864.                                                                                                                                              | Examination.<br>10th November 1864.                                                                                                                                                                                                                                                               | Examination, 13th February 1865, after opening defective Fuzes, &c.                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Remarks.                                                                                                         |

|                             |                                                                                                                                             |                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                   |                                                                                                                                           |                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                  |
| Fuzes, time, Armstrong.     | As for service; in water-proof paper bags and tin boxes.<br>Travelled "top up," Nos. 1 to 10.<br>Travelled "bottom up," Nos. from 11 to 20. | Nos. 1, 3, 7, and 10, no apparent defects.<br>Nos. 2, 5, 6, and 8, slight in pellet "on end."<br>Nos. 4 and 9, slight shake in pellet "on side."<br>Nos. 13, 14, and 20, no apparent defects.<br>Nos. 11, 15, 16, and 17, slight shake in pellet "on end."<br>Nos. 12, 18, and 19, slight shake in pellet "on side." | No alteration                                                                                                                                                                                                                                                                                     | No alteration                                                                                                                             | No alteration                                                                                                                                                                   | No alteration from examination 13th October.                                                                                                                                                                                                                                                      | On examination of these fuzes after opening the slight shake in pellet noticed in a portion of them on the first examination was found to be owing to the manufacture, and not from any defect caused by travelling; it being caused by a slight amount of play between the pellet and the body of the fuze, but the needles were all found to be very much corroded and in one case (No. 6) entirely destroyed. This has probably been caused by a small portion of composition which is pressed round the needle. | The whole of these fuzes were packed in a deal box, and travelled in the wagon as marked in column "How packed." |
| Fuzes, time, "Boxer."       | In zinc boxes<br>Travelled "bottom up," Nos. from 1 to 10.<br>Travelled "top up," Nos. from 11 to 20.                                       | Nos. 2, 3, 5, 6, 8, and 10, no apparent defects.<br>Nos. 1, 4, 7, and 9, slight shake in pellet "on side."<br>Nos. 11, 12, 14, 15, 16, 17, 18, and 19, no apparent defects.<br>Nos. 13 and 20, slight shake in pellet "on side."                                                                                     | No alteration                                                                                                                                                                                                                                                                                     | No alteration                                                                                                                             | No alteration                                                                                                                                                                   | No alteration from examination 13th October.                                                                                                                                                                                                                                                      | The shake in the pellets of these fuzes when opened was found to be but slight, and principally on the side, Nos. 4, 13, and 20 were found to have a slight amount of end shake, and on removing the wires they were found slightly sheared or compressed, but not to an extent to render them unsafe.                                                                                                                                                                                                              |                                                                                                                  |

| Lubricators, "Armstrong," Nos. 1 to 24.                  | As for service, (viz.) in a deal box 26" long, 16" wide, and 12" deep. The lubricators being packed in 4 tins of 6 each, with a wood batten between each tin; the first and third tin being "top up," the second and fourth "bottom up." | No apparent defects                                                    | Nos. 5, 10, 19, and 20, copper cracked on upper part, oil escaping. No. 7, copper cracked in under side, oil escaping. The above were removed from the box at this date. | Nos. 6, 8, 9, 15, and 24, copper cracked on upper part, oil escaping. No. 18, copper cracked in under side, oil escaping. These were also removed from the box at this date. | Nos. 2, 11, 13, 17, 22, and 23, copper cracked on upper part, oil escaping. These were removed at this date.  | Nos. 4 and 14, copper cracked on upper part, oil escaping. Nos. 1, 3, 12, 16, and 21, not apparently injured.                                                                                                                                                                     |                                                                     |          |
| Lubricators, "Whitworth," Nos. 1 to 26.                  | As for service, (viz.) in a deal box, 25" long, 17" wide, and 12" deep. The lubricators being packed in 3 rows of 8, on their edge, and the box filled with brown paper.                                                                 | No apparent defects                                                    | No. 26, one of the wires for fixing the thin wad broken.                                                                                                                 | No. 2, both wires for fixing the thin wad broken.                                                                                                                            | No alteration                                                                                                 | Nos. 2 and 26, both wires for fixing thin wad broken. Nos. 16 and 17, one wire for fixing thick wad broken.                                                                                                                                                                       |                                                                     |          |
| Shell, segment, 70-pr. B.L. Nos. 1 to 10.                | Loose in wagon                                                                                                                                                                                                                           | Lead very much bruised, but diameters all within limits.               | Nos. 1, 4, 6, 7, 9, and 10, lead at base much bruised. No. 7, a small portion of the lead off body; shells generally full to gauge.                                      | Nos. 1, 4, 5, 6, 7, and 10, high gauge will not pass over the base or body. Nos. 6, 7, and 10, a small portion of lead off the body.                                         | Nos. 4, 6, 7, and 9, high gauge will not pass over the body or base; No. 7 about 1½ in. of lead off the body. | Nos. 6 and 8, the high gauge will not pass over the body or base. No. 7, about 3¼ x 2 inches of lead off the body, and very much burred over at base. The lead on the whole of the shells is very much bruised, but in no case to an extent to prevent them passing into the gun. |                                                                     |          |
| Shells, segment, 70-pr. muzzle-loading, Nos. 1 to 10.    | Loose in wagon                                                                                                                                                                                                                           | Studs of all the shells very much bruised.                             | Studs of all the shells very much bruised.                                                                                                                               | Nos. 2, 6, and 9, studs very much bruised, being increased in width about .1 of an inch.                                                                                     | Shells and studs in about the same condition as on last examination.                                          | Nos. 1, 2, 3, 4, 6, 8, 9, and 10, some of the studs on these shells are bruised to an extent that it is doubtful whether they will pass into the narrow shunt at the bottom of the bore. In other respects the shell does not appear to be injured.                               |                                                                     |          |
| Shells, shrapnel, "Whitworth," 70-pounder, Nos. 1 to 10. | Loose in wagon                                                                                                                                                                                                                           | Strings of brass plugs partially destroyed. Body of shell not injured. | Strings of plugs nearly all destroyed. Body of shell not injured.                                                                                                        | Strings of plugs all destroyed. Body of shells not injured.                                                                                                                  | No alteration                                                                                                 | No alteration.                                                                                                                                                                                                                                                                    |                                                                     |          |

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

## No. 55, E.O.C. 70-pr. ARMSTRONG WEDGE BREECH-LOADING RIFLE GUN.

This gun is in precisely the same state both as regards dimensions and defects as when received from Elswick, viz.:-

Bore slightly dented at 74" from D. to R. of up, and slight tool marks in powder chamber at 2 R. of up to L. of up, and 14½ R. of D. to D.

## No. 59, E.O.C. 70-pr. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

Developed during recent firing. { Slight flaw or defect in steel in bore, commencing at 21½" from bottom of bore of R. of up, and extending to 22¼ L. of D., at which point it extends all round the bore.

The bore is also grazed by the shot from 47 to 95 inches from muzzle nearly all round; this was done at proof, and has not increased since.

## No. 268, 70-pr. WHITWORTH MUZZLE-LOADING RIFLE GUN.

Developed during the recent firing. { Slight fissures and scoring from front of copper bouche extending to about 10 inches from front of vent in the groove in line of the vent and the one on the right, and on the flat or lands on loading side. There is also a slight wearing of the copper and slight fissuring of the bore at the edge of the bouche in rear of vent.

The bore is also dented from 18 to 21½ from bottom of bore "D.;" this was done at proof, and has not increased during the late firing.

23/6/64.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of 12-pr. and 70-pr. Armstrong and Whitworth Rifle Guns, for Armstrong and Whitworth Committee at Shoeburyness, from 4th to 9th July 1864.

## No. 55A, 70-pr. ARMSTRONG BREECH-LOADING RIFLE GUN.

*Examination before firing the 120 rounds of rapid firing.*—Slight scoring at junction of powder and shot chamber extending from right to up to left. Bottom of vent considerably worn on the left side, the dimensions being .53 by .23 of an inch; the cone of the copper bouche was also worn, and a piece of thin steel could be passed up between the gun and the cone about .6 of an inch.

Shot chamber expanded at front end .002 of an inch.

Bore expanded at front of shot chamber .005 of an inch.

This gun was re-bouched before firing the 120 rounds.

*Examination after firing 120 rounds rapid firing.*—Scoring at junction of powder and shot chamber not increased.

Bottom of vent cut away by gas in rear, the defects extending about .7 of an inch up the vent and taking a spiral form. Expansion in shot chamber and bore not increased.

Recess for nose of stopper { Horizontally, .01 of an inch.  
expanded. { Vertically, nil.

## No. 59A, 70-pr. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE GUN.

*Examination before firing 120 rounds of rapid firing.*—Bore expanded from 9 to 18 inches from bottom .002 of an inch.

The slight flaw in bore from 21 to 22¼ inch from bottom has not increased. Slight fissures in front of vent about .1 of an inch long, and copper slightly worn round edge of cone. Diameter of vent .23 full.

*Examination after firing 120 rounds of rapid firing.*—Expansion in bore not increased.

Slight flaw from 21 to 22¼ inches from bottom not increased.

Fissures in front of vent increased to .25 long, and wearing round edge of cone slightly increased. Diameter of vent increased to .24 full.

## No. 268A, 70-pr. WHITWORTH MUZZLE-LOADING RIFLE GUN.

*Examination before firing 120 rounds of rapid firing.*—Fissures and scoring in front of vent considerably increased in length, breadth, and depth, it now extending to 12 inches in front of vent and from "right of up to left of up;" there are also several slight fissures in rear of the vent about .15 of an inch long. The denting in the bore from 18" to 21¼" down has not increased, but there is a slight amount of wearing on the bearing side of angle.

This gun was re-bouched prior to this examination.

*Examination after firing 120 rounds of rapid firing.*—The fissuring and scoring in bore very much increased in

length and depth, it now extending to 16 inches in front of vent, and to .45" in rear.

Bore enlarged in angles in front of vent by scoring; amount of enlargement at 8½ inches from bottom .006 of an inch tapering off to .001 at 17 inches.

The bore is also enlarged at 6 inches from the bottom .001, and at the bottom of the bore .004 of an inch.

The bottom of the vent is very much enlarged, and there is also a considerable opening all round the cone of the copper bouche.

The diameter of the vent is .23 full.

The denting in bore and wear in angles has not increased. There is no alteration in these guns, the examination will therefore be the same as reported 21st June 1864.

Gutta percha impressions of the defects in the above guns, and of the vents of 70-pr. 267B Whitworth and No. 60B. shunt guns were left at Shoeburyness for the inspection of the Committee.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of Three 70-pr. Experimental Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 21st July 1864.

## No. 59A, E.O.C. ARMSTRONG MUZZLE-LOADING SHUNT RIFLE.

Slight fissures in front of vent increased to .3 of an inch in length, and wearing round cone of copper bouche slightly increased. In other respects the gun is in the same condition as reported 6th July 1864.

This gun has been re-vented since this examination.

## No. 55A, E.O.C., ARMSTRONG BREECH-LOADING RIFLE GUN (WEDGE).

No alteration. Examination as reported 6th July 1864.

## No. 268A, WHITWORTH MUZZLE-LOADING RIFLE GUN.

Fissures and scoring slightly increased in length and depth. The impressions when first removed from the gun showed the gutta percha to have been forced upwards of .1 of an inch into the fissures both in front and rear of the cone of the vent. There has evidently been an alteration made in this gun since the last examination. The groove

in line of the vent has apparently been either filed or scraped for 7 or 8 inches in front of the vent, by which means a portion of the scoring has been removed, as shown on the impressions; the groove also is enlarged at that part, the amount of enlargement being as follows:—

|                                    |                 |
|------------------------------------|-----------------|
| At 9 in. from bottom of bore -     | ·01 of an inch. |
| 12       "       "       "       " | ·007       "    |
| 15       "       "       "       " | ·005       "    |
| 17       "       "       "       " | ·002       "    |

In other respects the examination is the same as reported 6th July 1864.

This gun has been re-vented prior to this examination.

RICH. K. FREETH, Major, R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of 70-pr. and 12-pr. Armstrong and Whitworth Competitive Rifle Guns at Shoeburyness for Armstrong and Whitworth Committee, 16th, 17th, and 19th September 1864.

70-pr., No. 268, WHITWORTH MUZZLE-LOADING RIFLE GUN.

The fissures and scoring in bore have considerably increased since examination 21/7/64, both in length and depth, they now extending from 2 inches in rear to 19 inches in front of copper bouche.

The diameter of bore in the groove in line of old vent has also slightly increased, the enlargement being as follows:—

| Enlargement since last Examination.     | Total Enlargement. |
|-----------------------------------------|--------------------|
| At 9 in. from bottom of bore Nil.       | ·016               |
| 12       "       "       "       " Nil. | ·011               |
| 15       "       "       "       " ·002 | ·008               |
| 17       "       "       "       " ·003 | ·006               |

The bore is also slightly expanded, the amount of expansion since last examination and total amount being as follows:—

| Expansion since last Examination, 21/7/64. | Total Expansion. |
|--------------------------------------------|------------------|
| At bottom of bore - - ·003                 | ·007             |
| 3 in. from bottom of bore ·003             | ·006             |
| 6       "       "       "       " ·003     | ·004             |
| 9       "       "       "       " ·003     | ·003             |
| 12       "       "       "       " ·002    | ·002             |
| 15       "       "       "       " ·004    | ·004             |
| 18       "       "       "       " ·009    | ·009             |
| 21       "       "       "       " ·004    | ·004             |
| 24       "       "       "       " ·002    | ·002             |

The wearing on bearing side of groove also appears to be slightly increased.

Copper plug inserted in old vent projects into bore ·3 of an inch.

Vent in centre of bottom, no defects.

70-pr., No. 59, E.O.C. MUZZLE-LOADING SHUNT RIFLE GUN.

Slight fissures or crack in bore, extending from 3·9 to 4·5 inches from bottom of bore "Left of up."

Fissure in front of vent increased to ·6 of an inch in length, and wearing round cone of vent slightly increased.

The driving edge of the grooves are all slightly worn; the wear on the two upper grooves appear only to be about half the depth of the groove, while the lower one is worn the whole depth. The greatest amount of wear is in the groove "Left of up," where it shows on the impression to be about 0·5 of an inch, and to extend from 2½ to 21½ inches from end of rifling; the wear in the other two is about ·03 of an inch.

The defect in bore from 21½ to 22½ has not increased.

No expansion in the bore has taken place since last examination, 21/7/64.

The whole of the expansion which has taken place since the commencement of the experiment is ·002 of an inch in the powder chamber.

70-pr., No. 55, E.O.C. BREECH-LOADING WEDGE GUN.

Slight defect in powder chamber "Right," a piece of steel having been let in; this had slightly started. This defect extends about 1 by 1½ inches from end of powder

chamber. Scoring at junction of powder and shot chamber on the upper part of the bore slightly increased.

No expansion in the bore or chamber has taken place since last examination, 21/7/64.

Slight defect in nose of stopper, a piece of steel having been let in; both this and the piece in the powder chamber have been let in since the examination, 21/7/64.

The expansion in the bore and chamber since commencement of firing is as follows:—

| Expansion since Commencement of Experiment. |                                         | Expansion since last Examination, 21/7/64. |
|---------------------------------------------|-----------------------------------------|--------------------------------------------|
| Powder chamber.                             | At 1½" from breech end ·002             | Nil.                                       |
|                                             | 9½       "       "       "       " ·001 | "                                          |
|                                             | 13       "       "       "       " ·001 | "                                          |
| Shot chamber.                               | Breech end - ·003                       | "                                          |
|                                             | Muzzle end - ·003                       | "                                          |
| Bore                                        | At 25½ - - ·003                         | "                                          |
|                                             | 28       "       "       "       " ·006 | "                                          |
|                                             | 32       "       "       "       " ·010 | "                                          |

|                                             | Vertical - ·001                         | "                                          |
| Nose of stopper.                            | Horizontal - ·010                       | "                                          |
|                                             | Vertical - Nil.                         | "                                          |

C. M. MOLONY, Lieutenant, R.A.,  
For Inspector of Ordnance.

REPORT of EXAMINATION of Three 70-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 22nd October 1864.

No. 268, 70-pr. WHITWORTH MUZZLE-LOADING RIFLE GUN.

Fissures and scoring in bore slightly increased in depth and length, it now extending to 3½ inches rear and 19½ inches in front of vent from edge of cone.

The impression taken while the copper bouche was out of the gun shows the fissures in front and rear of cone to be about ·25 of an inch in depth.

Slight graze in bore from 22½ to 23½ from bottom of bore "R. of up."

This gun had been re-vented in end of bore prior to this examination, and the copper cup has also apparently been replaced with a new one.

In other respects the gun is in the same condition as reported 16th Sept. 1864.

No. 59, E.O.C. 70-pr. MUZZLE-LOADING SHUNT RIFLE GUN.

Slight fissures or crack from 3·9 to 4·5 inches from bottom "L. of up" not increased.

Fissure in front of vent increased in length to ·75 of an inch.

Wear on driving side of grooves not increased.

Diameter of vent through ·24 of an inch.

In other respects the gun is in the same condition as reported 16th Sept. 1864.

No. 55, E.O.C. 70-pr. BREECH-LOADING WEDGE GUN.

Slight defect in end of powder chamber removed by a ring 2 inches broad having been inserted in end of chamber.

No apparent increase of scoring at junction of powder and shot chamber.

Diameter of vent through ·23, but the ·25 gauge will pass down about 2 inches diameter at bottom ·45.

In other respects the gun is in the same condition as reported 16th Sept. 1864.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of Three 70-pr. Experimental Rifle Guns for Armstrong and Whitworth Committee at Shoeburyness, 4th November 1864.

70-pr., No. 268, WHITWORTH MUZZLE-LOADING RIFLE GUN.

Fissures and scoring in bore not increased since last examination.

Copper cup in end of bore apparently crushed back; this defect commences at 1½ inch from centre of vent and extends to exterior edge of cup all round, the amount of displacement being about ·05 of an inch since last examination. The end of vent bouche is forced back about ·075 of an inch, and the diameter of the vent through the platina is increased about ·035 of an inch; there is also a slight opening between the edge of the cup and the bore; this is most apparent in the angles.

There is also a slight amount of expansion in the bore, the amount since last examination being as follows:—

|                                 |                  |
|---------------------------------|------------------|
| At 2 inches from bottom of bore | ·002 of an inch. |
| 6                               | ·002             |
| 12                              | ·001             |
| 17                              | ·002             |
| 20                              | ·016             |
| 21                              | ·011             |
| 22                              | ·010             |
| 23                              | ·007             |
| 24                              | ·005             |
| 25                              | ·002             |
| 26                              | ·001             |
| 30                              | Nil              |

70-pr., No. 55, E.O.C. BREECH-LOADING WEDGE GUN.

Slight expansion in recess for stopper, the amount being horizontal ·001, and vertical ·002 of an inch.

Diameter of vent ·23 full, bottom ·55 of an inch.

In other respects the gun is in the same condition as reported 17th Sept. 1864.

70-pr., No. 59, E.O.C. MUZZLE-LOADING SHUNT RIFLE GUN.

Fissures in front of vent and slight crack from 3·9 to 4·5 inches from bottom "L. of up" not increased; wearing round edge of cone slightly increased.

Wear on driving edge of groove not increased.

Diameter of vent through ·25 full, bottom ·55 of an inch.

In other respects the gun is in the same condition as reported 17th Sept. 1864.

10/11/61.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

REPORT of EXAMINATION of Six 70-pr. Rifle Guns for Armstrong and Whitworth Committee at Shoe-buryness, 8th to 14th December 1864.

No. 55A, E.O.C. 70-pr. BREECH-LOADING WEDGE RIFLE GUN.

Slight defect in iron ring in end of P. C. up, apparently caused by the escape of gas. The diameter of the vent is ·24. In other respects the gun is in the same state as reported, 4/11/64.

No. 59A, E.O.C. 70-pr. MUZZLE-LOADING SHUNT RIFLE GUN.

The fissure in front of vent has increased ·1 of an inch. The bore is dented on edge of groove from 19·5 to 24 in. L. of D. ·013 deep. Diameter of vent, true. This gun has been re-vented since examination dated 4th November 1864.

No. 268A, WHITWORTH MUZZLE-LOADING RIFLE (70-pr.) GUN.

Copper cup in end of bore crushed back ·1 of an inch at 1·75" from centre. The end of vent bouche also forced back ·15 of an inch. The diameter of the vent has increased at ·7" from centre of vent. A hole ·3" deep and ·2" wide is found since last examination.

The fissures and scoring in the bore has not increased since reported 4/11/64.

No. 49B, E.O.C. 70-pr. BREECH-LOADING WEDGE RIFLE GUN.

Slight flaw in bore at 2½ R. of D., 46½ L. of D. and up, 50½ L. of up and R., 60½ and 69½ L. of D., not altered since receipt from Elswick. Slight flaw at 69 L. of D., 76½ D., and in P. C. 2½ L. of D., 4 Left at 4½ L. of up, from edge of copper bouche 1·45" long, 5 R. of D. and L. of D., 7 L. of up, 10½ R. and R. of up, 13½ L. of D. Slight scoring at junction of powder and shot chambers extending from R. to up to Lt.

Slight opening round cone of vent in powder chamber.

Diameter of vent "full" bottom ·4 of an inch. Powder chamber expanded ·002, and bore expanded in front of shot chamber ·003 of an inch.

No. 60B, E.O.C. 70-pr. MUZZLE-LOADING SHUNT RIFLE GUN.

Slight opening round cone of vent in bore. Diameter of vent ·23, bottom ·5 (the hole in vent has taken a spiral form). No expansion has taken place in the bore, but from the breech end to 36 ins. D. is scaly from rust caused by water in the bore; and on the upper surface about the same length is roughness, probably from the same cause.

No. 267B, WHITWORTH (70-pr.) MUZZLE-LOADING RIFLE GUN.

This gun has been vented through the end of breech, and original vent plugged up with copper.

The bore is slightly fissured by gas from front edge of plug to 2"; in other respects this gun is the same as at first examination.

20/12/64.

RICH. K. FREETH, Major R.A.,  
Inspector of Ordnance.

RANGE AND ACCURACY—*continued.*

## COMMON SHELL (weighted with sand).

SHOEBURYNESSE.

*Particulars, &c. of Shell and Ammunition.*

Weight, 10 lbs. 6 oz. empty.

Diameter, 3·074 inches.

Length, 9·02 in.

Bursting charge, 8½ oz.

Length of cartridge, 8·25 inches, including lubricator.

Diameter, 3 inches.

Brand of powder, A4.

Charge, 1½ lbs.

Wad, service lubricator ; no sponging.

## EXPERIMENTS AGAINST EARTHWORK AND ABBATIS.

April 8, 1864.

The following practice was carried on against an earthwork with three embrasures, armed with guns on garrison carriages, wood figures of men round each gun. Two 9-foot targets, 6 feet in rear of each gun. The work and faces of the embrasure were revetted with Jones' gabions.

RANGE, 1,300 yards.

| No. | Elevation. | Deflection. | Projectile. | Fuze.       |
|-----|------------|-------------|-------------|-------------|
|     | ° /        | '           |             | '           |
| 1   | 2 54       | 10 left     | Solid shot  | —           |
| 2   | "          | 10 "        | "           | —           |
| 3   | 2 57       | 10 "        | "           | —           |
| 4   | "          | 10 "        | "           | —           |
| 5   | 2 55       | 11 "        | "           | —           |
| 6   | "          | 11 "        | Seg. shell  | T. & P. 2'1 |
| 7   | "          | 12 "        | "           | 2'1         |
| 8   | 2 56       | 13 "        | "           | 2'05        |
| 9   | "          | 13 "        | "           | 2'1         |
| 10  | "          | 13 "        | "           | "           |

The firing was carried on against the embrasure; both time and percussion fuzes used.

The general results could alone be tabulated. They are as follows:—

15 hits on target; 6 through; 5 men hit.

RANGE, 900 yards.

| No. | Elevation. | Deflection. | Projectile. | Fuze.         |
|-----|------------|-------------|-------------|---------------|
|     | ° /        | '           |             | '             |
| 1   | 1 44       | 7 left      | Solid shot  | —             |
| 2   | 1 45       | 7'5 "       | "           | —             |
| 3   | 1 46       | 7'5 "       | "           | —             |
| 4   | "          | 7'5 "       | "           | —             |
| 5   | 1 47       | 8 "         | "           | —             |
| 6   | 1 49       | 7 "         | Seg. shell  | 1'4 & per.    |
| 7   | "          | 7 "         | "           | "             |
| 8   | "          | 7 "         | "           | "             |
| 9   | "          | 7 "         | "           | "             |
| 10  | "          | 7 "         | "           | "             |
| 11  | 1 45       | 7 "         | Com. shell  | Percus. only. |
| 12  | "          | 9 "         | "           | "             |
| 13  | "          | 10 "        | "           | "             |
| 14  | "          | 10 "        | "           | "             |
| 15  | "          | 10 "        | "           | "             |
| 16  | "          | 10 "        | "           | "             |
| 17  | "          | 10 "        | "           | "             |
| 18  | "          | 10 "        | "           | "             |
| 19  | "          | 10 "        | "           | "             |
| 20  | "          | 10 "        | "           | "             |

The solid shot and segment shell were fired at the embrasure, the common shell to damage the merlon.

The general results are as follows:—

Both capsquares of the gun broken and the carriage damaged; 5 figures struck; 65 holes through the target; 2 struck; 11 lodged.

April 11, 1864.

RANGE, 700 yards against embrasures.

| No. | Elevation. | Deflection. | Projectile. | Fuze.          |
|-----|------------|-------------|-------------|----------------|
|     | ° /        | '           |             | '              |
| 1   | 1 12       | 5 left      | Shot        | —              |
| 2   | "          | 10 "        | "           | —              |

| 5   | 1 14       | 11 "        | "           | —              |
| 6   | "          | 11 "        | Seg. shell  | 1'05 & percus. |
| 7   | 1 15       | 11 "        | "           | " "            |
| 8   | "          | 11 "        | "           | " "            |
| 9   | "          | 8 "         | "           | " "            |
| 10  | "          | 8 "         | "           | " "            |
| 11  | 1 12       | 8 "         | Com. shell  | Percussion.    |
| 12  | "          | 8 "         | "           | "              |
| 13  | 1 13'5     | 8 "         | "           | "              |
| 14  | 1 15       | 8 "         | "           | "              |
| 15  | "          | 8 "         | "           | "              |

The general results are as follows:—

On target, 65 through; 15 lodged; 11 struck; 3 figures struck.

## ABBATIS.

RANGE, 600 yards.

5 round solid shot.

5 " segment shell, percussion fuze.

5 " common shell, do. do.

The common shell had little effect. The shot and segment shell, however, damaged it very considerably and made it quite practicable for assault.

## EXPERIMENTS AGAINST STOCKADES, WALLS, FIELD ARTILLERY, AND ROPE MANTLETS.

### STOCKADES.

*Shoeburyness, April 18, 1864.*

The stockade, 18 feet long, 8 feet high, consisted of rough elm timbers, freshly felled, 12 feet long and 14 inches in thickness; the ends were sunk four feet in the ground, and the stockade strengthened by a strong oak brace in rear.

RANGE, 800 yards.

Targets 6 feet in rear to show the effect of the shell.

10 segment shell,  
10 common shell

were fired; the stockade, although but little damaged, owing to the wood being green, afforded no protection whatever, the targets in rear being broken to pieces.

As regards destructive effect there was no choice between the guns.

### WALLS.

The wall, 18 feet long, 8 feet high, 28 inches in thickness, was built of the best stock bricks and cement.

RANGE, 1,150 yards.

Targets 6 feet in rear to show the effect of the shell.

5 rounds solid shot.  
5 „ segment shell.  
5 „ common shell,

were fired. At the conclusion of the practice there

appeared to be very little difference in the amount of damage done by the guns.

That fired at by—

B.L. Armstrong was most damaged.

M.L. Armstrong „ next.

Whitworth „ next.

As regards the targets in rear, the relative damage done by the splinters of shells was as follows:—

M.L. Armstrong, most damage, most distributed.

B.L. „ next „ most concentrated.

Whitworth least damage, considerably less so than either of the other two.

### PRACTICE WITH SEGMENT SHELL AGAINST FIELD ARTILLERY.

Percussion fuse used throughout.

A 6-pounder field gun was placed in action, with limber in rear; dummy figures were placed to represent the gun detachment.

RANGE, 1,000 yards.

A screen was placed in front so as to ensure the shell bursting 25 yards in front of the gun.

1. Missed the screen and grazed 13 yards in front of the gun; 5 of the gun detachment struck; 4 hits on the gun carriage; 1 hit on the limber.
2. Hit the screen 3 feet 4 inches from the ground; 4 of the gun detachment struck; 1 hit on the gun carriage.
3. Passed through the foot of the screen; 4 of the gun detachment struck; 1 hit on the gun carriage.

4. Hit the screen 2 feet 4 inches from the ground; 1 of the gun detachment struck; 2 hits on gun carriage.

The screens were removed and the firing carried on at the guns.

5. Grazed 33 yards in front of the gun; 1 hit on gun carriage.
6. Grazed 24 yards in front of the gun; 1 of the gun detachment hit.
7. Grazed 10 yards in front of the gun; 5 of the gun detachment hit; 8 hits on the gun carriage.
8. Grazed 21 yards in front of the gun; 2 of the gun detachment hit.
9. Grazed 17 yards in front of the gun; 7 of the gun detachment hit; 3 hits on the carriage.

### SEGMENT SHELL.

Percussion fuses used throughout.

#### EFFECT AGAINST ROPE MANTLETS.

*June 3, 1864.*

RANGE, 400 yards.

The mantlets consisted of four plies of 4-inch rope frapped together with spun yarn in the usual manner.

A screen 2 inches thick was placed 23 yards in front of the mantlets, to burst the 3 first rounds of shell.

Two 9-foot targets 6 yards in rear of the mantlets.

No. 1. Burst 15 yards in front of mantlet.

Six hits on mantlet.

Nil through the mantlet.

Nil hits on target.

No. 2. Burst 15 yards in front of mantlet.

One hit on mantlet.

Nil through the mantlet.

Nil hits on target.

No. 3. Burst 8 yards in front of mantlet.

Two hits on mantlet.

One through the mantlet.

Nil hits on target.

No. 4. Passed through the mantlet, the screen having been removed; burst while passing through; hit full on the face of the gun. No hits on target.

No. 5. Passed through top of mantlet and burst on passing. 82 hits on target.

No. 6. Passed through the mantlet and burst on passing. 88 hits on target.

DESTRUCTIVE EFFECT OF SEGMENT SHELL USED AS  
COMMON CASE.

Both Time and Percussion Fuzes used.

May 5, 1864.

RANGE, 450 yards. The target consisted of six lines of 2-inch deal boards, 9 × 54 feet front, five yards interval. Five rounds segment shells were fired.

| Line of Targets. | No. of Target. | Through. | Struck. |
|------------------|----------------|----------|---------|
| 1st Line -       | 1              | 1        | 1       |

## DESTRUCTIVE EFFECT OF SEGMENT SHELL AGAINST TARGETS REPRESENTING TROOPS IN LINE AND COLUMN.

May 30, 31, 1864.

RANGE, 600 yards.

The shells were fired at screens 2 inches thick, placed so as to insure the shells bursting 25 yards in front of the targets.

The targets consisted of three 9-foot targets, 2 inches thick, placed in line.

The shells struck the screen from 3 to 6 feet above the ground.

The percussion fuze used throughout.

SEGMENT SHELL—*continued.*

September 13, 1864.

RANGE, 1,300 yards.

Segment shell with percussion fuzes, fired so as to strike the ground at different distances in front of the targets and burst on graze.

The targets consisted of three lines of 2-inch deal targets 9 × 9 feet, 5 in each line, 6 yards interval between the lines.

SEGMENT SHELL—*continued.*

September 14, 1864.

RANGE, 800 yards.

Segment shell, with percussion fuzes, fired to strike the ground at different distances in front of the target and burst on graze.

The target consisted of 7 deal targets, 9' × 9' × 2".

## ROUGH USAGE.

*Practice on the 18th October 1864.*

The 12-pounders that had been in the muddy ditch all night were this morning taken out, and, with the view of ascertaining which of the guns could be got ready for action in the shortest possible time, the following experiment was carried out:—

The three guns being in the condition that they were in when taken out of the ditch, viz., covered more or less with thick mud, and with their bores more or less full of the same, were placed on the sea wall, detachments told off for them, and 10 rounds solid shot were fired from each as rapidly as possible, the time being taken from the word "load."

## RESULTS:—

Fired the 1st round in 2 min. 25 secs.  
 " 10th " 7 min. 15 secs.

*Note.*—Very considerable delay (amounting probably to 1 min. 30 secs.) was here experienced in firing the 1st round, owing to the ignorance and stupidity of the man whose duty it was to enter cartridge and projectile; a delay of about 30 secs., owing to the same cause, was also experienced in firing the 2nd round.

## EFFECT OF PREMATURE BURSTING OF SHELL IN THE BORE.

4. Common shell,
5. Segment shell,

were burst as nearly as possible at the seat of the shot.

To insure this a hole was bored through the base of the shell, the lubricator and end of the cartridge removed so as to bring the charge in contact with the burster of the shell.

The gun was slightly dented.

10 rounds solid shot were fired at a target; the result showed that the accuracy of the gun was not impaired.

*October 28.*

The 10 rounds solid shot,  
 10 " segment shell,  
 10 " common shell,

which were placed in wet straw in April last and periodically wetted with sea water were fired to-day.

The ammunition did not appear to be in any way damaged.

*December 22, 1864.*

The gun was laid on skidding on the sand, and fired at with a 9-pounder Armstrong gun with solid shot. Charge,  $1\frac{1}{4}$  lb. Range, 40 yards.

*1st Shot.*—Struck the gun on the edge of the coil in front of the trunnion hoop, indented the coil, and made a slight crack in it  $\frac{1}{4}$ -in. in length. The shot ricocheted on to the shoulder of the trunnion, and made a small dent.

The direction of the shot was at an angle of  $30^\circ$  with the axis of the gun.

Inside of the gun not damaged.

*2nd Shot.*—The gun was placed so as it should be hit direct by the shot. It was struck on the edge of the same coil again, and the gun was knocked 2 feet off the skidding; the coil had a piece about 3 inches in diameter scooped out of it, and a small dent was visible in the bore, the coil was loosened at the edge.

The gun was subsequently fired 4 rounds without difficulty.

## RAPID FIRING.

*April 19, 1864.*

200 rounds of solid shot were fired, not as a competition as to rapidity of firing, but the firing was continuous, carried on as rapidly as service considerations would admit of.

The gun detachments consisted of six men each, and were relieved every 30 rounds.

The position of the gun was determined by lot.

The gun detachments and officers were selected also by lot.

The time taken in firing the 200 rounds was as follows :—

1 hour 20 minutes.

At the 43rd round water was used to the breech screw at the request of Sir W. Armstrong, and frequently afterwards.

At the 84th round the breech screw stuck, and required considerable force to move it, the delay was trifling.

Oil was also used to this gun continually after the 43rd round.

At the conclusion of this firing the gun fired 8 rounds of common shell (blind) at 9-foot targets, 300 yards range, to hit the bull's eye ; 3 first rounds trial shots ; 5 last recorded.

|    |       |                     |
|----|-------|---------------------|

| 2. | 21    | " "                 |
| 3. | 14.75 | " "                 |
| 4. | 13.75 | " "                 |
| 5. | 4.5   | " "                 |

The 3 vent pieces were used.

*May 19, 1864.*

99 rounds solid shot were fired entirely by men of the Royal Artillery, the gun detachment being changed every 20 rounds until 60 rounds had been fired, and afterwards every 13 until the conclusion of the experiment.

One 6-foot floating target. Range, 1,200 yards. Elevation, 2° 40'.

The times were as follows :—

|                  | Min. | Sec. |
|------------------|------|------|
| 1st 20 rounds in | 8    | 8    |
| 2nd 20           | 12   | 21   |
| 3rd 20           | 10   | 52   |
| 1st 13           | 5    | 6    |
| 2nd 13           | 8    | 15   |
| 3rd 13           | 6    | 39   |
| Total            | 51   | 21   |

The vent pieces were changed every time with the detachments, and a wet cloth was used to the breech-screw and slot occasionally after 40 rounds.

The upper keep pin of the tappet was removed by Sir W. Armstrong before commencing the experiments. 31 hits on target.

*June 1, 1864.*

100 rounds solid shot were fired by men of the Royal Artillery at targets at various distances. The detachments were changed every 20 rounds. *First 2 rounds trial.*

The times were as follows :—

|           | Min. | Sec. |
|-----------|------|------|
| 18 rounds | 5    | 57   |
| 20        | 7    | 5    |
| 20        | 7    | 30   |
| 20        | 7    | 57   |
| 20        | 6    | 20   |
| Total     | 35   | 34   |

Neither oil nor water were used during the firing. The vent piece was changed 3 times. Two miss fires.

## WITHOUT LUBRICATORS.

*November 10.*

20 rounds solid shot were fired without lubrication.

Time—11 minutes.

Two shot stripped.

66 rounds were to be fired as rapidly as possible, but this gun did not complete them, as from the practice it was evident this gun could not be used without lubrication, owing to the lead stripping from the shot.

The detachments were changed so that each detachment worked each gun, and at the conclusion of the practice Nos. 1, 2, 3 were asked their opinion as to ease of working.—

No. 1 preferred Whitworth as easier to lay.  
2 " M.L. Armstrong " " load.  
3 " Whitworth could give no reason.

All agreed that the muzzle loading guns were far preferable to the breech loader.

| 5. 6.3 "              | 10. 6.2 "         |

## RAPID FIRING.

Nov. 29, 1864.

The following experiment was carried on to show how quickly 100 rounds could be fired from the breech-loading 12-pounder Armstrong gun, by a detail of duties different from that prescribed by the service regulations.

Neither water nor oil was used.

The first 50 rounds were fired as follows :—

|                           |
|---------------------------|
| 10 rounds in 120 seconds. |
| 10 " 85 "                 |
| 10 " 76 "                 |
| 10 " 73 "                 |
| 10 " 75 "                 |

Total, 6 minutes 59 seconds.

The whole of the above were fired with one vent-piece.

At the conclusion of the above 50 rounds 10 minutes' interval was allowed, during which the gun was cleaned, and another 50 rounds fired as follows :—

|                          |
|--------------------------|
| 10 rounds in 84 seconds. |
| 10 " 79 "                |
| 10 " 77 "                |
| 10 " 78 "                |
| 10 " 81 "                |

Total, 6 minutes 39 seconds.

The detachment was selected from the men of the experimental department at Shoeburyness.

The time was taken from the word "load."

A fresh vent-piece was used for the second 50 rounds.

## SEA SERVICE TRIALS.

The gun was mounted on common boat's carriage in the bows of a 32 ft. pinnace.

INDEPENDENT FIRING.—November 3, 1864.—*Portsmouth.*

Ten rounds were fired independently with shot, the boats having very slight but rapid rolling, pitching, and yawing motions.

Wind ; force, 2.

## 12-pounder Armstrong's Breech-loader.

Shot, 12 lbs.  
Charge,  $1\frac{1}{2}$  lbs.  
Distance of target, 1,800 yards.  
Elevation,  $4^{\circ} 20'$ .  
Deflection,  $0^{\circ} 8' L$ .

10 rounds were completed in 9' 55".  
Recoil, 2 ft. 6 in. and a taut breeching.  
The advantage of breech-loading in a boat was very apparent, the operation being performed with ease, and without much exposure of the gun numbers.  
Total numbers gained in this practice - - 39

November 8, 1864.

## DISEMBARKING.

The 12-pounder competitive guns were thrown ashore (on Southsea beach) from the boats, and practised without loss of time as naval field pieces, to ascertain their comparative merits under the circumstances.

Guns, field carriages, and limbers were thrown overboard, as the boats touched the beach, and roused ashore by the drag ropes. The limber boxes were carried on shore by the limber numbers. When the guns were mounted they were "Rear" limbered up and marched about 10 yards higher up the beach; then "Action—Rear," "Load," "1° elevation and lay for the horizon," "Fire," "Cease—Firing."

The following several periods of time are recorded against each gun during the evolutions; the difference between the times connected with the mounting of carriage and limber must be attributed to the crews only; but those connected with the handling of the guns may fairly be due to their difference in weight and handiness.

|                                                             | Armstrong Breech-loader. |    |
|-------------------------------------------------------------|--------------------------|----|
| Boats touching beach to the time when guns were overboard - | m.                       | s. |
| Carriage landed - - -                                       | 0                        | 19 |
| " mounted - - -                                             | 1                        | 14 |
| Limber landed - - -                                         | 1                        | 46 |
| " mounted - - -                                             | 2                        | 21 |
| Gun mounted - - -                                           | 3                        | 10 |
| "Rear—Limber up" - - -                                      | *3                       | 30 |
| "Action—Rear" - - -                                         | 3                        | 40 |
| "Load"† - - -                                               | 4                        | 15 |
| "Fire" - - -                                                | 4                        | 30 |
|                                                             | 6                        | 21 |

Very little cleansing was required; the guns were dragged breech foremost through water, sand, and shingle.

This gun was not sponged out before loading.

|                                                                              | Carriage. | Gun.  | Load.   | Fire.                    |                                              |                                                                       |
|                                                                              | m. s.     | m. s. | m. s.   | m. s.                    | This gun was not sponged out before loading. |                                                                       |
|                                                                              | 1 46      | 3 30  | 4 30    | 6 21                     |                                              |                                                                       |

\* The hole in rear of the breech assisted the men much in allowing the use of a handspike in mounting.

† The order "Load" followed immediately "Action—Rear."

# 12-POUNDER WHITWORTH GUN.

## EXPERIMENTS FOR DETERMINING RANGE AND ACCURACY.

N.B.—The figures in *Italics* are the rounds struck out by the competitors as abnormal shots.

### SOLID SHOT.

SHOEBURYNNESS.

#### Particulars, &c. of Gun No. 264.

Weight, 10 cwt.  
Length, 6 ft. 7.7 in.  
Diameter of circle { circumscribed, 3.012 in.  
                          inscribed, 2.755 "  
Length of bore, 6 ft. 2 in.  
Spiral, 1 turn in 56 inches.

#### Particulars, &c. of Shot and Ammunition.

Weight, 11 lbs. 15.2 oz.  
Length, 8.78 inches.  
Length of cartridge, 10.5 in.  
Diameter of cartridge, 2.57 in.  
Brand of powder, A4.  
Charge, 1½ lbs.  
Wad, Boxer's lubricator, filled with oil ; brush sponge.

RANGE AND ACCURACY—*continued.*

## SHRAPNEL SHELL (BOXER'S), (weighted with burster).

SHOEBURYNNESS.

*Particulars, &c. of Shell and Ammunition.*

Weight, 11 lbs. 14·4 oz.  
 Length, 8·95 inches.  
 Number of bullets, 35.  
 " segments, 14.  
 Bursting charge, 3 or 6 drs.  
 Length of cartridge, 10½ in.

Diameter of cartridge, 2·57 in.  
 Brand of powder, A4 powder.  
 Charge, 1¼ lbs.  
 Wad, Boxer's lubricator filled with oil.  
 Dry brush sponge.

                                                              |          |              |  |       |    |         |       |    |        |
|               | °            | Yards.  |            | Yards. | Yards. |    ## EXPERIMENTS AGAINST EARTHWORKS AND ABBATIS.

April 8, 1864.

The following practice was carried on against an earthwork with the embrasure revetted with Jones' gabions. The work armed with cast-iron guns on garrison carriages, wood figures of men round each gun, and two 9-foot targets 6 feet in rear of each gun.

RANGE, 1,300 yards.

The firing to be carried on against the embrasures.

| 15  | "          | 5 "         | "            | "                   |

The general results are as follows :—

On target, 28 through ; 6 lodged ; 6 struck ; 5 men hit.

## ABBATIS.

RANGE, 600 yards.

5 solid shot  
5 shrapnel shell  
5 common shell

} fired.

Concussion fuzes used.

The abbatiss was *very* little damaged, not sufficiently to admit of men passing through it.

## STOCKADES.

*Shoeburyness, April 18, 1864.*

The stockade, 18 feet long, 8 feet high, consisted of rough elm timbers, freshly felled, 12 feet long and 14 inches in thickness; the ends were sunk four feet in the ground, and the stockade strengthened by a strong oak brace in rear.

RANGE, 800 yards.

Targets 6 feet in rear to show the effect of the shell.

10 shrapnel shell,  
10 common shell,

were fired. The stockade, although but little damaged, owing to the wood being green, afforded no protection whatever, the targets in rear being broken to pieces.

As regards destructive effect there was no choice between the guns.

## WALLS.

The wall, 18 feet long, 8 feet high, 28 inches in thickness, was built of the best stock bricks and cement.

RANGE, 1,150 yards.

Targets 6 feet in rear to show the effect of the shell.

5 rounds solid shot.  
5 " shrapnel shell.  
5 " common shell,

were fired. At the conclusion of the practice there appeared to be very little difference in the amount of damage done by the guns.

That fired at by—

B.L. Armstrong was most damaged.  
M.L. Armstrong " next.  
Whitworth " next.

As regards the targets in rear, the relative damage done by the splinters of shells was as follows:—

M.L. Armstrong, most damage, most distributed.  
B.L. " next " most concentrated.  
Whitworth least damage, considerably less so than either of the other two.

RANGE, 1,000 yards.

PRACTICE with S. SHELL against FIELD ARTILLERY.

To burst 25 yards in front of gun.

- No. 1. Grazed 15 yards in front of the screen; balls, fragments, &c. intercepted by screen; 12 drs. burster used throughout.
2. Hit screen 5 feet from ground; 3 of gun detachment struck; 4 hits on gun carriage; 1 hit on limber.
3. Passed through the screen 4 feet from the ground; 4 of gun detachment struck; 1 hit on carriage.
4. Hit screen 6ft. 8in. from the ground; 7 of the gun detachment struck; 3 hits on gun carriage; 1 hit on limber.

The screens were then removed and the firing carried on at the guns.

5. Grazed 12 yards in front and burst on second graze behind the gun; damage done, nil.
6. Grazed 60 yards short, and burst on second graze behind the limber; damage done, nil.
7. Grazed 12 yards in front of the gun; 3 of gun detachment struck; 4 hits on gun carriage; 1 hit on the limber.
8. Grazed 17 yards in front and burst; 1 of the gun detachment hit; 6 hits on gun carriage.
9. Grazed 21 yards in front and burst; 4 men of the gun detachment hit; 2 hits on the carriage; 7 hits on the limber.

The 6-pounder guns and carriages at which the practice was carried on were "in action," limbers in rear, dummy figures placed to represent the gun detachment.

## ROPE MANTLETS.

## EFFECT AGAINST ROPE MANTLETS.

*June 3, 1864.*

SHRAPNEL SHELL.

RANGE, 400 yards.

The mantlets consisted of four plies of 4-inch rope frapped together with spun yarn in the usual manner.

A screen 3 inches thick was placed 23 yards in front of the mantlet, to burst the three first rounds of shell.

Two 9-foot targets, 6 yards in rear of mantlet.

No. 1. Burst 13 yards in front of the mantlet.  
8 hits on mantlet.  
6 through the mantlet.  
10 hits on target.

No. 2. Burst 13 yards in front of mantlet.  
9 hits on mantlet.  
4 through the mantlet.  
17 hits on target.

No. 3. Burst 18 yards in front of mantlet.  
7 hits on mantlet.  
4 through the mantlet.  
10 hits on the target.

No. 4. Burst on passing through mantlet, the screen having been removed.  
114 hits on the target.

No. 5. Burst on passing through the mantlet.  
102 hits on the target.

# DESTRUCTIVE EFFECT OF BOXER'S SHRAPNEL SHELL USED AS COMMON CASE.

May 5, 1864.

RANGE, 450 yards.

The target consisted of six lines of 2-inch deal boards 9 × 54 feet front, five yards interval. Five rounds shrapnel shell were fired.

| Line of Targets. | No. of Target. | Through. | Struck. |
|------------------|----------------|----------|---------|
| 1st Line -       | 1 right        | 9        | 3       |
|                  | 2              | 16       | 4       |

32 of these were large holes.

## DESTRUCTIVE EFFECT OF BOXER'S SHRAPNEL SHELL AGAINST TARGETS REPRESENTING TROOPS IN LINE AND IN COLUMN.

12 drs. burster, except at 100 yards, where 6 drs. were used, unless otherwise stated.

*May 30 and 31, 1864.*

RANGE, 600 yards.

The shells were fired at a screen 4 inches thick, placed in front of the targets, so as to insure the shells bursting 25 yards in front.

The targets consisted of three 9-foot targets 2 inches thick placed in line.

The shells struck the screen from 3 to 6 feet above the ground.

Boxer's concussion fuze.

BOXER'S SHRAPNEL SHELL—*continued.*

June 1, 1864.

RANGE, 600 yards.

The shells fired at a screen placed so as to burst them 100 yards in front of targets.

The shells struck the screen from 10 to 7 feet from the ground.

The shells struck the screen from 7 feet to ground.

BOXER'S SHRAPNEL SHELL—*continued.*

June 9, 1864.

RANGE, 800 yards.

The screen was placed 20 yards in front of the target, so as to insure the shells bursting 10 yards in front of the target.

From the ground to 5 feet.

Struck the screen from 5 to 8½ feet.

BOXER'S SHRAPNEL SHELL—continued.

September 13, 1864.

RANGE, 1,300 yards.

Shrapnel shell with percussion fuzes, fired so as to strike the ground at different distances in front of the targets, and burst on raze.

The targets consisted of 3 lines of 2-inch deal targets 9 × 9 feet, 5 in each line ; 6 yards interval between the lines.

## BOXER'S SHRAPNEL SHELL—continued.

September 13, 1864.

RANGE, 1,300 yards.

Shrapnel shell with percussion fuzes, fired so as to strike the ground at different distances in front of the targets.

The targets consisted of 3 lines of 2-inch deal targets, 9 × 9 feet; 5 in each line; 6 yards interval between the lines.

## ROUGH USAGE.

October 18, 1864.

The 12-pounders that had been in the muddy ditch all night were this morning taken out, and with the view of ascertaining which of the guns could be got ready for action in the shortest possible time, the following experiment was carried out:—

The three guns being in the condition that they were in when taken out of the ditch, viz., covered more or less with thick mud, and with their bores more or less full of the same, were placed on the sea wall, detachments told off for them, and ten rounds solid shot were fired from each as rapidly as possible, the time being taken from the word "load."

## RESULTS:—

|                        | Min. | Sec. |
|------------------------|------|------|
| Fired the 1st round in | 1    | 4    |
| " 10th "               | 5    | 10   |

NOTE.—There was no check whatever in firing these rounds.

## EFFECT OF PREMATURE BURSTING OF SHELL IN THE BORE.

- 4 Common shell,
- 5 Segment shell,

were burst as nearly as possible at the seat of the shot.

To ensure this a hole was bored in the base of the shell, and the lubricator and end of the cartridge removed so as to bring the cartridge in contact with the burster of the shell.

The bore was not damaged in the slightest degree. 10 rounds solid shot were fired at a target; the result showed that the accuracy of the gun was not impaired.

October 28th, 1864.

- 10 rounds solid shot,
- 10 " shrapnel shell,
- 10 " common shell,

which were placed in wet straw in April last, and periodically wetted with sea water, were fired to day.

The ammunition did not appear to be in any way damaged.

December 22, 1864.

The gun was laid on skidding on the sand, and fired at with solid shot from a 9-pounder Armstrong gun. Charge,  $1\frac{1}{4}$  lb. Range, 40 yards.

*1st Shot.*—Struck the gun on the chase, and made a small dent; the shot glanced off and struck the trunnion, broke it off and drove it 20 yards away; the trunnion coil was also broken and loosened.

The direction of the shot was at an angle of  $30^\circ$  with the axis of the gun.

*2nd Shot.*—Hit partially on the chase, partially on the skidding, made a slight dent, but merely rolled the gun round.

*3rd Shot.*—As the last shot merely grazed the gun a third was fired, which struck the gun on the chase and made a dent.

The gun was subsequently fired 4 rounds without difficulty.

## RAPID FIRING.

*April 19, 1864.*

200 rounds of solid shot were fired, not as a competition as to rapidity of firing, but the firing to be continuous, carried on as rapidly as service considerations would admit of.

The gun detachments consisted of six men each, and were relieved every 30 rounds. In this detachment No. 3 was a civilian and was not relieved with the detachments.

The position of the guns was determined by lot.

The gun detachments and officers were selected also by lot.

The time taken in firing the 200 rounds was as follows:—

1 hour 12 minutes.

At the conclusion of the firing the gun fired 8 rounds of common shell (blind) at 9-foot targets, 300 yards range, to hit the bull's eye. Three first rounds trial shots; five last recorded.

1. 26·5 inches from centre.
2. 21·5       "       "
3. 5·0       "       "
4. 10·5       "       "
5. 12·0       "       "

*May 19, 1864.*

99 rounds solid shot were fired entirely by men of the Royal Artillery, the gun detachments being changed every 20 rounds until 60 rounds had been fired, and afterwards every 13 until the conclusion of the experiment.

One 6-foot floating target. Range, 1,200 yards.  
Elevation, 2° 20'.

The times were as follows:—

|                |   | Min. | Sec.  |
|----------------|---|------|-------|
| 1st 20 rounds  | - | -    | 9 45  |
| 2nd 20       " | - | -    | 10 45 |
| 3rd 20       " | - | -    | 15 0  |
| 1st 13       " | - | -    | 8 15  |
| 2nd 13       " | - | -    | 6 30  |
| 3rd 13       " | - | -    | 8 45  |
| Total          | - | -    | 59 0  |

28 hits on the target.

*June 1, 1864.*

100 rounds were fired by men of the Royal Artillery at targets placed at various distances. The detachments were changed every 20 rounds.

First two shots trial.

The times were as follows:—

|            |   | Min. | Sec. |
|------------|---|------|------|
| 18 rounds  | - | -    | 6 55 |
| 20       " | - | -    | 7 51 |
| 20       " | - | -    | 6 54 |
| 20       " | - | -    | 5 52 |
| 20       " | - | -    | 5 52 |
| Total      |   | 33   | 24   |

Trifling delay during the 18 rounds, caused by the priming wire sticking in the vent.

## WITHOUT LUBRICATORS.

*November 10.*

20 rounds solid shot were fired without lubricators.

Time—12½ minutes.

The practice was excellent.

66 rounds were then fired as rapidly as possible.

Time—22 minutes.

The detachments were changed so that each detach-

ment worked each gun, and at the conclusion of the practice Nos. 1, 2, 3, were asked their opinion as to ease of working.

No. 1 preferred Whitworth as easier to lay.

2       "       M.L. Armstrong as easier to load.

3       "       Whitworth but could give no reason.

All agreed that the muzzle loaders were far preferable to the breech-loader.

## MR. WHITWORTH'S PROGRAMME.

November 23, 1864.

Shot and hollow shot supplied by Mr. Whitworth  
as the best form for flight fired at  $33^\circ$  elevation.

Gun, 12-pounder Whitworth, 2 lb. charge.

1st five rounds, hollow shot.

|                 |                                                                                                                  |

| 2nd " solid shot             | - 2 lb. "              |
| 3rd " hollow shot            | - $1\frac{3}{4}$ lb. " |
| 4th " "                      | - $1\frac{1}{2}$ lb. " |

November 23, 1864, very slight breeze.

November 24, 1864, very strong breeze down the range.

The gun was laid by Mr. Whitworth's man with a clinometer.

MR. WHITWORTH'S PROGRAMME—*continued.*

## SUBMARINE PRACTICE.

October 12, 1864.

The target consisted of a 3-inch oak target, 9 × 9 feet.

*No. 1 Round.*—Gun 30 yards from target; axis,  $10\frac{1}{2}$  feet above the water;  $10^\circ$  depression; charge,  $1\frac{3}{4}$  lbs.; projectile, flat-fronted shell weight.

Struck the water about 10 yards from the target; hit the target  $3\frac{1}{2}$  feet below the surface of the water, and in line indented the face of the target .5 of an inch.

*No. 2 Round.*—Gun placed the same as No. 1.  $8^\circ$  depression.

Struck the water 5 yards in front of target; penetrated the target 6 inches from the surface of the water.

*No. 3 Round.*—Gun placed 45 yards from the target.  $5\frac{1}{2}^\circ$  depression.

Struck the water 3 yards in front of the target; penetrated the target 8 inches below the surface of the water, and 1 foot to left of line.

*No. 4 Round.*—Gun placed as for No. 3.  $5\frac{1}{2}^\circ$  depression.

Struck the water 3 yards in front of target; penetrated the target 6 inches from the surface and in line; rose 3 yards behind the target, ricocheted once 5 yards in rear.

October 13.

*No. 5 Round.*—Gun placed 90 yards from the target; axis  $12\frac{1}{2}$  feet above the surface of the water.  $4\frac{1}{2}^\circ$  depression.

Struck the water 4 yards in front of target; glanced upwards and passed through the target 3 inches above the water line.

*No. 6 Round.*—Gun placed as in No. 5.  $3^\circ 15''$  depression.

Struck the water 8 yards in front, rose and fell 30 yards in rear.

*No. 7 Round.*—Gun placed as in No. 5.  $3^\circ 14''$  depression.

Struck the water 8 yards in front of target and ricocheted over.

*No. 8 Round.*—Gun placed as in No. 5.  $4^\circ$  depression.

Struck the water 12 yards in front and ricocheted over target.

*No. 9 Round.*—Gun 33 yards from target.  $5\frac{1}{2}^\circ$  depression.

Struck the water 3 yards in front, and penetrated the target 6 inches below the surface.

*No. 10 Round.*—The gun same as last round.  $6^\circ$  depression.

Struck the water 4 yards in front, and penetrated the target 1 foot below the surface.

The following projectiles were found at the following distances from the target:—

|       |   |   |          |
|-------|---|---|----------|
| No. 1 | - | - | 4 yards. |
| „ 2   | - | - | 7 „      |
| „ 3   | - | - | 16 „     |
| „ 4   | - | - | 18 „     |
| „ 5   | - | - | 12 „     |

October 14, 1864.

*No. 1 Round.*—Gun 33 yards from target: height of water 7 feet 9 inches; depression,  $6^\circ 30''$ .

Struck water 8 yards in front of target, and the target 12 inches below the water; made an indent in target.

*No. 2 Round.*—Gun, &c., as in No. 1 round.

Struck water 8 yards in front of target; made an indent in the target.

*No. 3 Round.*—Gun, &c., as in No. 1 round.

Struck water 8 yards in front of target; made an indent in the target.

*No. 4 Round.*—Gun, &c., as in No. 1 round.

Struck water 8 yards in front of target; made an indent on target.

Average depths of indents,  $1\frac{3}{4}$  inches.

## MR. WHITWORTH'S PROGRAMME—continued.

October 10, 1864.

No. 251. 12-pounder.

C. Shell, 3 diameters long, not tooled; weight, filled with sand, 10 lbs. Elevation, 5°.

The gun was laid by Mr. Whitworth's representative with a clinometer. Charge,  $1\frac{3}{4}$  lbs.

| Round. | Range. | Deflection, Right. |
|--------|--------|--------------------|
| 1      | 2,090  | 21·0               |
| 2      | 2,117  | 20·8               |
| 3      | 2,106  | 12·4               |
| 4      | 2,080  | 21·6               |
| 5      | 2,185  | 16·0               |
| 6      | 2,105  | 17·6               |
| 7      | 2,098  | 17·6               |
| 8      | 2,103  | 15·2               |
| 9      | 2,143  | 19·6               |
| 10     | 2,085  | 18·4               |
| 11     | 2,064  | 18·0               |
| 12     | 2,100  | 18·0               |
| 13     | 2,123  | 17·6               |
| 14     | 2,067  | 20·0               |
| 15     | 2,100  | 21·0               |
| 16     | 2,031  | 19·0               |
| 17     | 2,080  | 18·8               |
| 18     | 2,029  | 19·4               |
| 19     | 2,073  | 16·0               |

October 11, 1864.

Common shell, 5 diameters long. Charge, 2 ozs. Elevation, 45°.

| Round. | Range. | Deflection, |       |
|--------|--------|-------------|-------|
|        |        | Right.      | Left. |
| 1      | 633    | 1·0         | —     |
| 2      | 604    | —           | 5·8   |
| 3      | 636    | —           | 4·0   |

This practice was discontinued as the 2 oz. cartridge allowed the shell to pass the vent.

October 12, 1864.

The end of a shot having been placed at the bottom of the bore to prevent the shell passing the vent, the practice was continued.

Elevation, 45°; charge,  $3\frac{1}{2}$  ozs.

| Round. | Range. | Deflection, Right. |
|--------|--------|--------------------|
|        | Yards. | Yards.             |
| 1      | 1,154  | 23·0               |
| 2      | 1,264  | 13·8               |
| 3      | 1,181  | 23·0               |
| 4      | 1,239  | 15·4               |
| 5      | 1,222  | 11·6               |
| 6      | 1,320  | 14·2               |
| 7      | 1,237  | 12·4               |
| 8      | 1,191  | 12·6               |
| 9      | 1,316  | 12·4               |
| 10     | 1,122  | 11·0               |

SEA SERVICE TRIALS.

The gun was mounted on a common boat's carriage in the bows of a 32-ft. pinnace.

INDEPENDENT FIRING.—November 3, 1864.—PORTSMOUTH.

Ten rounds were fired independently with shot, the boat having very slight but rapid rolling, pitching, and yawing motions.

Wind  ; force, 2.

Shot, 12 lbs.  
Charge,  $1\frac{3}{4}$  lbs.  
Distance of target, 1,800 yards.  
Elevation,  $4^{\circ} 0'$ .  
Deflection,  $0^{\circ} 6' L$ .

10 rounds were completed in 12' 0".  
Recoil, 2 ft. 6 in. and a taut breeching.  
Sponging and loading was performed with difficulty, owing to the length of the gun, and the loading numbers were much exposed.  
Total numbers gained in this practice 48

November 8, 1864.

DISSEMBARKING.

The 12-pounder competitive guns were thrown ashore (on Southsea beach) from the boats, and practised without loss of time as naval field pieces, to ascertain their comparative merits under the circumstances.

Gun, field carriage, and limber was thrown overboard, as the boat touched the beach, and roused ashore by the drag ropes. The limber boxes were carried on shore by the limber numbers. When the gun was mounted it was "Rear" limbered up and marched about 10 yards higher up the beach ; then "Action—Rear," "Load" "1° elevation and lay for the horizon," "Fire," "Cease—Firing."

The following several periods of time are recorded against each gun during the evolutions ; the difference between the times connected with the mounting of carriage and limber must be attributed to the crews only ; but those connected with the handling of the guns may fairly be due to their difference in weight and handiness.

|                                                                                                             |  |  |  |  | Whitworth.   |

# 12-POUNDER MUZZLE-LOADING ARMSTRONG GUN.

## EXPERIMENTS FOR DETERMINING RANGE AND ACCURACY.

N.B.—The figures in *Italics* are the rounds struck out by the competitors as abnormal shots.

### SOLID SHOT.

### SHOEBURYNNESS.

#### Particulars, &c. of Gun, No. 52.

Weight, 8 cwt. 3 qrs. 27 lbs.  
Length, 5 ft. 11 $\frac{1}{4}$  in.  
Diameter of bore, 3 in.  
Length of bore, 5 ft. 7.7 in.  
Grooves { No. 3.  
          { Width, .71 in.  
          { Depth, .09 in.  
Spiral, 1 turn in 38 calibres.  
No lubrication; dry sponge.

#### Particulars, &c. of Shot and Ammunition.

Weight, 11 lbs. 8.8 oz.  
Diameter, 2.96 in.  
Length, 7.628 in.  
Length of cartridge, 7.5 in.  
Diameter of cartridge, 2.9 in.  
Brand of powder, A4.  
Charge, 1 $\frac{3}{4}$  lbs.  
Wad, junk, and stearine used after April 28; wet sponge used for 13 rounds.

## RANGE AND ACCURACY—continued.

## COMMON SHELL (filled with sand).

SHOEBURYNESS.

*Particulars, &c. of Shell and Ammunition.*

Weight, 11 lbs. 10·8 ozs.

Diameter, 2·96 inches.

Length, 9·01 in.

Bursting charge, 7 oz.

Length of cartridge, 7·5 inches.

Diameter of cartridge, 2·9 in.

Brand of powder, A4.

Charge,  $1\frac{3}{4}$  lbs.

Wad, nil.

Service sponge.

*Note.*—Wet sponge used for first 8 rounds.

## RANGE AND ACCURACY—continued.

## SEGMENT SHELL (weighted with burster).

SHOEBURYNESS.

*Particulars, &c. of Shell and Ammunition.*

Weight, 10 lbs. 6·4 oz.  
Length, 7·25 in.  
Diameter, 2·96 in.  
Bursting charge, 520 grains.

Length of cartridge, 7·5 in. No lubricator,  
dry sponge.  
Diameter of cartridge, 2·9 in.  
Charge,  $1\frac{3}{4}$  lbs.  
Wad, junk, and stearine used after April 28/64.

## TARGET PRACTICE.

## SOLID SHOT.

*April 5, 1864.*

The firing was carried on against wooden targets divided into squares of 12 inches, the inscribed circle in centre square being the bull's-eye.

RANGE, 200 yards. Five trial shots. Elevation, 13'. Deflection, 2' left.

No. 1. 11 inches from centre.  
 „ 2. 5 „ „  
 „ 3. 4 „ „  
 „ 4. 6 „ „  
 „ 5. 9.75 „ „

*April 6, 1864—continued.*

RANGE, 600 yards. Two trial shots. Elevation, 54'. Deflection, 5' left.

No. 1. 42.5 inches.  
 „ 2. 14.75 „  
 „ 3. 24.5 „  
 „ 4. 16.5 „  
 „ 5. 36.5 „

*April 7, 1864.*

RANGE, 800 yards. Three trial shots. Elevation, 1° 19'. Deflection, 7' left.

No. 1. 37 inches.  
 „ 2. 28.25 „  
 „ 3. 47 „  
 „ 4. 9 „  
 „ 5. 36 „

RANGE, 300 yards. Five trial shots. Elevation, 22'. Deflection, 3' left.

No. 1. centre.  
 „ 2. 11.5 inches.  
 „ 3. 22.75 „  
 „ 4. 5.5 „  
 „ 5. 12.5 „

RANGE, 900 yards. Five trial shots. Elevation, 1° 32'. Deflection, 11' left.

No. 1. 68.5 inches.  
 „ 2. miss.  
 „ 3. 15 inches.  
 „ 4. 10.5 „  
 „ 5. miss.

RANGE, 400 yards. Five trial shots. Elevation, 29'. Deflection, 4' left.

No. 1. 22.75 inches.  
 „ 2. 7.5 „  
 „ 3. 9.5 „  
 „ 4. 12 „  
 „ 5. 19.25 „

*April 8, 1864.*

RANGE, 1,300 yards. Five trial shots. Elevation, 2° 38', Nos. 1 and 2; 2° 36', Nos. 3, 4, 5. Deflection, 12' left.

No. 1. miss.  
 „ 2. 48 inches from centre.  
 „ 3. 50 „ „  
 „ 4. 53 „ „  
 „ 5. miss.

*April 6, 1864.*

RANGE, 500 yards. Three trial shots. Elevation, 38'. Deflection, 5' left.

No. 1. 23.75 inches.  
 „ 2. 8.25 „  
 „ 3. 13.75 „  
 „ 4. 25 „  
 „ 5. 19.75 „

## TARGET PRACTICE.—SOLID SHOT—continued.

April 29, 1864.

May 10 and 12, 1864.

RANGE, 1,700 yards. Three 9-foot targets. Five trial shots not recorded.

RANGE, 2,000 yards. Three 9-foot targets. Five trial shots not recorded.

## EXPERIMENTS AGAINST EARTHWORKS AND ABBATIS.

*April 8, 1864.*

The practice was carried on against an earthwork with the embrasure revetted with Tyler's gabions. The work was armed with cast-iron guns on garrison carriages, having wood figures round the gun to represent men. Two 9-feet targets were placed 6 feet in rear of the guns.

RANGE, 1,300 yards.

The firing carried on against embrasure.

| —  | Elevation. | Deflection. | Projectile. | Fuze.                |
|----|------------|-------------|-------------|----------------------|
| 1  | 2 44       | 16 left     | Solid shot  | —                    |
| 2  | "          | 17 "        | "           | —                    |
| 3  | "          | 17 "        | "           | —                    |
| 4  | "          | 17 "        | "           | —                    |
| 5  | "          | 18 "        | "           | —                    |
| 6  | 2 43       | 19 "        | Seg. shell  | 2·05 and percussion. |
| 7  | 2 44       | 19 "        | "           | " "                  |
| 8  | "          | 20 "        | "           | 2 " "                |
| 9  | "          | 20 "        | "           | 2·05 " "             |
| 10 | "          | 20 "        | "           | " "                  |

Owing to the nature of the practice the general results of the practice alone could be recorded :—

On target ; 1 through ; no men hit ; 10 hits ; gun struck.

RANGE, 900 yards.

| —  | Elevation. | Deflection. | Projectile. | Fuze.         |

| 13 | 1 13·5     | 8 "         | "           | "                    |
| 14 | 1 15       | 8 "         | "           | "                    |
| 15 | "          | 8 "         | "           | "                    |

The general results are as follows :—

On target, 27 through ; 2 lodged ; 3 struck ; 3 figures struck.

## ABBATIS.

RANGE, 600 yards.

5 solid shot.

5 segment shell. Time and percussion fuze.

5 common shell. " " "

The abbatiss was considerably damaged by the solid shot and segment shell, which made a complete passage through it, and rendered it practicable for assault. The common shell did little damage.

## STOCKADES.

*Shoeburyness, April 18, 1864.*

The stockade 18 feet long, 8 feet high, consisted of rough elm timbers freshly felled 12 feet long, and 14 inches in thickness; the ends were sunk 4 feet in the ground and the stockade strengthened by a strong oak brace in rear.

RANGE, 800 yards.

Targets 6 feet in rear to show the effect of the shell.

10 S. shell.  
10 C. shell,

were fired; the stockade although but little damaged owing to the wood being green afforded no protection whatever, the targets in rear being broken to pieces.

As regards destructive effect there was no choice between the guns.

## WALLS.

The wall, 18 feet long, 8 feet high, 28 inches in thickness, was built of the best stock bricks and cement.

RANGE, 1,150 yards.

Targets six feet in rear to show the effect of the shell.

5 rounds solid shot.  
5 „ S. shell.  
5 „ C. shell

were fired; at the conclusion of the practice there appeared to be very little difference in the amount of damage done by the guns.

That fired at by—

B.L. Armstrong was most damaged.  
M.L. Armstrong „ next.  
Whitworth „ next.

As regards the targets in rear, the relative damage done by the splinters of shells was as follows :—

M.L. Armstrong, most damage, most distributed.  
B.L. Armstrong, next „ most concentrated.  
Whitworth, least damage, considerably less so than either of the other two.

## PRACTICE WITH SEGMENT SHELL AGAINST FIELD ARTILLERY.

A 6-pounder field gun was placed in action with limber in rear; dummy figures were placed to represent the gun detachment.

RANGE, 1,000 yards.

A screen was placed so as to insure the shell bursting 25 yards in front of the gun.

1. Hit the screen 4 feet from the ground; 6 of the gun detachment hit; the tire of the gun wheel broken; 9 hits on carriage; 3 hits on limber.
2. Hit screen 5 feet from the ground; 3 of the gun detachment hit; 3 hits on the gun carriage.
3. Grazed in front of the screen which intercepted the segments.
4. Hit the screen 7 feet 10 inches from the ground; 4 of the gun detachment hit; the screen was removed and the firing carried on against the gun.

The screens were removed and the firing carried on against the guns.

5. Grazed behind the limber and burst.
6. Hit No. 1 at the gun and burst; 5 of the gun detachment struck; 8 hits on the limber.
7. Grazed 7 yards in rear of the gun; 3 of the gun detachment struck; 14 hits on the limber; a large hole through right limber box.
8. Grazed 7 yards in rear of the gun; 4 of the gun detachment hit; 12 hits on limber; left limber box knocked away and a large fragment through both sides.
9. Grazed 17 yards in front of the gun; 6 of the gun detachment hit; 2 hits on carriage; 1 hit on limber.

## EFFECT AGAINST ROPE MANTLETS.

## SEGMENT SHELL.

*June 3, 1864.*

RANGE, 400 yards.

The mantlets consisted of four plies of 4-inch rope frapped together with spun yarn in the usual manner.

A screen 2 inches thick was placed 23 yards in front of the mantlet, to burst the 3 first rounds of shell.

Two 9-foot targets 6 yards in rear of the mantlet.

- No. 1. Burst 17 yards in front of mantlet.  
10 hits on mantlet.  
1 through the mantlet.  
1 hit on target.

- No. 2. Burst 17 yards in front of mantlet.  
4 hits on mantlet.  
Nil through the mantlet.  
Nil on target.

- No. 3. Burst 19 yards in front of mantlet.  
1 hit on mantlet.  
Nil through the mantlet.  
3 hit the target.

- No. 4. Burst on passing through the mantle the screen having been removed.  
77 hits on the target.

- No. 5. Passed through the mantlet, and burst.  
123 hits on the target.  
One shell burst at the muzzle.

# DESTRUCTIVE EFFECT OF SEGMENT SHELL, USED AS COMMON CASE.

May 5, 1864.

RANGE, 450 yards.

The target consisted of six lines of 2-inch deal boards, 9 × 54 feet front, 5 yards interval.

Five rounds were fired.

Time and percussion fuzes used.

| Line of Targets. | No. of Target. | Through. | Struck. | Remarks.               |

May 6, 1864.

RANGE, 450 yards.

Five rounds against the same six lines of targets.

The record taken of the number of men that would have been struck had the targets been replaced by men :—

|            |   |   |        |
|------------|---|---|--------|
| 1st line - | - | - | 3 men. |
| 2nd „ -    | - | - | 7 „    |
| 3rd „ -    | - | - | 25 „   |
| 4th „ -    | - | - | 32 „   |
| 5th „ -    | - | - | 24 „   |
| 6th „ -    | - | - | 17 „   |

May 9, 1864.

RANGE, 300 yards. At a single line of targets 72 feet face, to represent men :—

|          |   |   |        |
|----------|---|---|--------|
| 2 rounds | - | - | 6 men. |
| 3 „      | - | - | 11 „   |

RANGE, 200 yards. At the same targets.

|          |   |   |        |
|----------|---|---|--------|
| 2 rounds | - | - | 3 men. |
| 3 „      | - | - | 1 „    |

RANGE, 100 yards. At same line of targets.

|          |   |   |         |
|----------|---|---|---------|
| 2 rounds | - | - | 16 men. |
| 3 „      | - | - | 20 „    |

RANGE, 50 yards. At same line of targets.

|          |   |   |         |
|----------|---|---|---------|
| 2 rounds | - | - | 11 men. |
| 3 „      | - | - | 17 „    |

(LIEUT. REEVES') COMMON CASE.

October 17, 1864.

The target consisted of 2-inch deal, area  $9 \times 54$  feet.

# DESTRUCTIVE EFFECT OF SEGMENT SHELL AGAINST TARGETS REPRESENTING TROOPS IN LINE AND COLUMN.

May 30 and 31, 1864.

RANGE, 600 yards.

The shells were fired at a screen 2 inches thick, placed in front of the targets, so as to insure the shells bursting 25 yards in front.

The targets consisted of three 9-foot targets 2 inches thick.

The shells struck the screen from 3 to 6 feet above the ground.

Percussion fuze used throughout.

One segment shell burst at the muzzle.

SEGMENT SHELL—continued.

June 9, 1864.

RANGE, 800 yards.

The screen was placed 17 yards in front of the target, so as to insure the shells bursting 10 yards in front of the target.
